Sudan grass was obtained by the United States department of agriculture from Sudan, Egypt in 1909. Closely related to the cultivated sorghums, and like them an annual, Sudan grass in general appearance resembles Johnson grass except that it lacks the undesirable feature of the underground root-stalks. Reports on the presence of impurities in Sudan grass seed, including Johnson grass, may now be had from the branch seed laboratory of the United States department of agriculture, at the college of agriculture of the state university in Berkeley.

Under favorable conditions two or three cuttings of Sudan grass may be had. The yield varies from one to eight tons of cured hay per acre, dependent upon the length of the frostless period, the temperature, altitude, soil and amount of available moisture; either by natural precipitation or by irrigation. It will grow in a wide range of soils from sand to clay, but prefers a rich, well-drained, sandy loam.

The seed may be sown broadcast or drilled, but should not be put in the ground until damage by frost is past and the soil has become thoroughly warm. After seeding it takes from 75 to 80 days to secure the first cutting, about 45 days more for the second cutting, and fifty days more for the third.

The yield of seed has been found to be quite variable, according to the character of the soil, the supply of moisture, and the general seasonal condition for growth. A seed crop can be procured in from 95 to 100 days. Yields at Davis have ranged from 95 to 2030 pounds per acre, but where one seed crop is obtained, 1000 pounds or more may be considered an excellent yield, while an average production will probably range from 600 to 800 pounds per acre.

Sudan grass is easy to grow and handle, grows during the summer, gives large yields, and is said to be well liked by stock.

DUROC BREEDERS ORGANIZE

A meeting of breeders interested in the breeding and development of Duroc-Jersey swine in San Fernando Valley was held at Van Nuys on September 17, according to prearranged plans on the part of all concerned. There were less than 16 persons present and ready to become charter members. In the valley proper there are now from 25 to 30 breeders of this popular breed of swine, and it is believed that this community holds the record for interest displayed in the improvement of the Duroc-Jersey hog in this state.

The officers of the new association are J. C. Craig, Van Nuys, president; J. L. Stevenson, Van Nuys, vice president; and Dr. M. Creamer, Owensmouth, secretary-treasurer.

Those taking part in the meeting were: J. C. Craig, Van Nuys; L. R. Hitchcock, Van Nuys; G. W. Nance, Van Nuys; Dr. M. Creamer, Los Angeles; L. W. Serrell, Van Nuys; N. W. Grahn, Owensmouth; C. F. Seccombe, Van Nuys; Dect & Mourner, Van Nuys; Hewitt Bros., Van Nuys; E. F. Meyers, Lankershim; J. L. Stevenson, Van Nuys; Mrs. Ross Whitley, Van Nuys; A. V. Austin, Van Nuys; T. T. Middleton, Lankershim.

BIG TULARE DUROC SALE

One of the most important transactions ever made in California Duroc-Jersey circles was closed last week when a number of breeders in Tulare County sold to the Boston Land Company of Henrietta over 231 head of pure bred Durocs. Included in the lot were 90 fall pigs and the entire lot brought over $15,000. R. C. Sturgeon of Tulare, secretary of the Tulare County Livestock Association, and a director of the county Duroc-Jersey association, made the selections from the following herds: Allen Thompson, Tulare, 97; D. G. Cummins, Visalia, 93; S. A. Williamson, Visalia, 13; J. W. Stewart, Visalia, 13; W. J. Higdon, Tulare, 12; R. C. Sturgeon, 3.

The sale of such a large number leaves many of the breeders sold down to a point that they will have nothing to offer for some time.

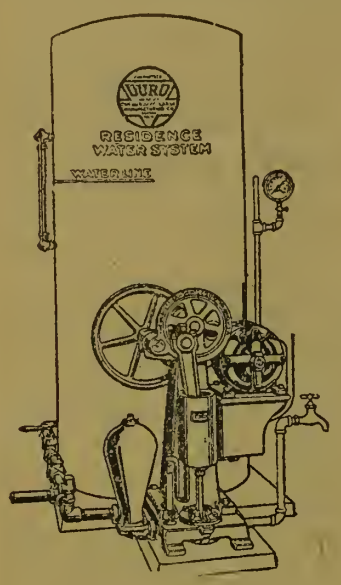
Farm and Dairy Equipment

"Less Labor" "Bigger Profits" "Better Work" "More "Comfort"

Invest some of this year's fine profits in better equipment that will not only help to produce a big season next year, but that will add comfort and pleasure to your living this year, next year, year after, and through all the years that lie ahead. We specialize in modern equipment for farm and dairy, and handle more lines of farm machinery than any other farm equipment concern on the coast. Our years of experience are at your command. Write us about any of the equipment described on this page, or any other equipment in which you may be interested. Every inquiry answered promptly and fully. WRITE TODAY.



"DURO" Deep Well Systems

Just the thing to bring suburban or country home right up to date.

Pump water from wells, where depth to water level ranges from 22 to 150 feet, and supply it under pressure for all purposes about the house or grounds.

"Built like a battleship," economical and entirely automatic in operation.

Send for Duro booklet.

AMERICAN PUMPS

We are distributors for American Standard Horizontal and Vertical Pumps—and Turbine Centrifugals.

They're the best pumps on the market. They cost a little more—but last longer and are decidedly cheaper in the long run.

American Pumps are famous for their large capacity and high efficiency.

We also have special pumps for direct connection to motors.

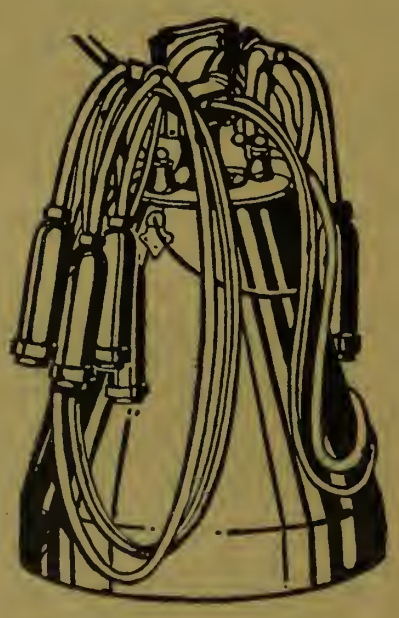
Write for Pump Catalog.

LOUDEN FEED AND LITTER CARRIERS

With a Louden Carrier, one man can do the work of four with wheelbarrows—and the man with the Louden will be less tired, at the end of the day.

That's the way to keep your help and cut your labor cost. The dairymen who make money are the dairymen who use modern equipment like this.

Send for Louden catalog and free book of barn plans.



Universal Milking Machines

With a Universal outfit one man can do the work of three, thus actually eliminating the work of two men. You can solve your labor problem, save time and inestimable hard work, and do the milking better with a Universal.

Milks with alternating action, massaging and relieving two teats while the other two are being milked—the natural way. Fits any cow.

Write for Universal catalog.

Save $5 a Day While You Make Hay!

When help is scarce and high priced, and all the horses are needed in the field, the Louden Power Hoist comes to the rescue. Does the work of both a team and a man, and does it in half the time.

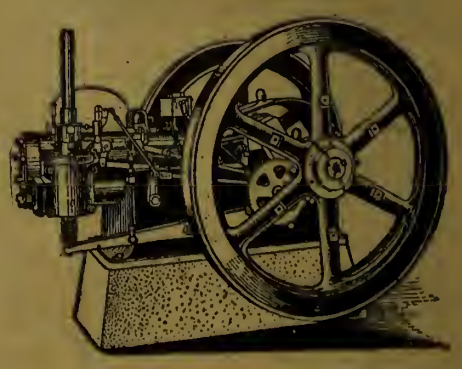
There's nothing complicated about the Power Hoist; it's just a plain, common-sense, sturdy machine, built to handle big loads easily, and to save time and labor in hay harvest. Can be used with any kind of power. Anybody can operate it. Try it out this season.

Write for Catalog

ALAMO Electric Light Plant

Most efficient plant of its kind on the market. No vibration. No noise. Solid, substantial, highly perfected. Will give many years of service. Write for Alamo booklet.

ENGINES in All Sizes



We have engines in every type and size—from 2½ H.P. to 100 H.P., operating on distillate or low grade fuel oil. Our lines include Western, Faultless, and Muncie Oil Engines. We'll show you how to get the most power and the best results at least cost—and that's what you want.

THE GLENN COUNTY FAIR

Continued from Page 449.

had a splendid showing, headed by the state fair grand champion, Natomas Baron Duke. This herd has the distinction of owning its own pens at the fair. A feature of the Anchorage Farm display was a miniature hog farm.

Largely through the efforts of R. J. Yates, pioneer Poland-China breeder of that county and president of the Glenn County Poland-China Breeders' Association, the members of the association had out an especially creditable showing. Because of the fact that he has sold most of the members their foundation stock, Yates very generously declined to compete for prize money, although he had an extensive exhibit. W. G. Gurnett showed the grand champion boar and Ferguson & McKaig had the champion sow.

The awards follow:

Exhibitors: R. J. Yates, Orland, not competing; Frank Reisman, Orland; W. G. Gurnett, Orland; Ferguson & McKaig, Orland; R. M. Rankin, Orland; D. H. Ward, Orland; Penfield & Penfield, Orland; Adam Lachenmeyer, Orland..

Aged boar—1, Frank Reisman.

Senior boar pig—1, Gurnett on Bob's Pride.

Junior boar pig—1, Gurnett on King Hadley; 2, Gurnett; 3, Ferguson & McKaig.

Aged sow—1, Rankin on Orphan Maid; 2 and 3, Rankin.

Senior yearling—1, Ward on Stella Chief; 2, Ward.

Senior sow pig—1, Ferguson & McKaig on Big Orphan's Pet; 2 and 3, Lachenmeyer.

Junior sow pig—1 and 2, Penfield & Penfield; 3, Ferguson & McKaig.

Senior champion boar—Reisman.

Junoir champion boar—Gurnett; reserve, Gurnett.

Grand champion boar—Gurnett; reserve, Gurnett.

Senior champion sow—Rankin; reserve, Ward.

Junior champion sow—Ferguson & McKaig; reserve, Penfield & Penfield.

Grand champion sow—Ferguson & McKaig; reserve, Rankin.

Four Duroc-Jersey breeders were in competition and the quality of their exhibits was excellent. F. D. Burr showed the grand champion boar and Hollingshead & Son were the owners of the champion sow. C. D. Bright won first on litter.

The awards follow:

Exhibitors: F. D. Burr, Orland; W. T. Hollingshead & Son, Orland; C. D. Bright, Glenn; A. W. Mudd, Orland.

Aged boar—1, Burr on Orion Model 1st.

Junior yearling—1, Bright on Uneeda Orion B; 2, Hollingshead; 3, Johannsen Bros.

Senior boar pig—1, Hollingshead on Uneeda Sensational Defender; 2, Bright; 3, Bright.

Junior boar pig—1, Mudd; 2, Hollingshead; 3, Bright.

Aged sow—1, Burr on Beauty 8th; 2, Hollingshead.

Junior yearling—1, Hollingshead on Uneeda Orion Lena 3d; 2, Burr; 3, Hollingshead.

Senior sow pig—1, Burr on Miss C. M. K. Lady; 2, Bright; 3, Bright.

Junior sow pig—1, Bright; 2, Bright; 3, Hollingshead.

Litter—1, Bright.

Senior champion boar—Burr; reserve, Bright.

Junior champion boar—Hollingshead.

Grand champion boar—Burr; reserve, Bright.

Senior Champion sow—Hollingshead; reserve, Burr.

Junior champion sow—Hollingshead.

Grand champion sow—Hollingshead; reserve, Burr.

William Hoskins was the only exhibitor of Hampshires and W. J. Beck made the only showing of Chester Whites.

Professor J. I. Thompson made all the swine awards.

Sheep and Goats

The exhibit of sheep was particularly encouraging. Glenn County boasts of having the largest number of individual breeders of Shropshires of any county in California, and while only one flock was represented, that of Guilford Farms, Orland, the interest around the sheep pens indicated that the ranchers of Glenn County are keenly alive to the possibilities of small flocks of pure bred sheep.

The famous flock of Rambouillets owned by Bullard Bros., Woodland, represented the only display of this breed. This flock won the prize offered for the best pen of four of any breed.

W. R. Graves exhibited two pens of Karrakules. Ellenwood and Ramsay of Red Bluff had a small showing of Corriedales, and another breeder exhibited specimens of the "Thribble Cross" that he has developed.

A small show of Angora, Toggenberg and Saanen goats was made by local breeders.

Professor James F. Wilson of the University Farm made the sheep, goat and wool awards.

Great Orion Sensation Jr.

offers the opportunity to breeders of Duroc-Jersey swine on the Pacific Coast to secure the blood of the world's most famous boar, Great Orion Sensation. See this great junior yearling boar at head of our show herd at Riverside and Los Angeles.

Shorthorn Sale at San Francisco

By M. C. Holman

The third sale of Shorthorns under the auspices of the California Shorthorn Breeders' Association will be held at San Francisco in conjunction with the San Francisco Livestock Show on Thursday, November 6, at 1:30 p. m. A splendid sale arena is under construction in the California Building, and ample seating facilities are being provided to accommodate a large attendance. Special committees of merit have selected the Shorthorns entered in the sale and have approved only animals possessing outstanding conformation and individuality as well as high class breeding.

The impress of the Shorthorn toward production of better quality cattle in California is beyond comprehension, and the development of this great breed continues. A recent visitor to the high Sierras was amazed at the improvement of local cattle over his prevlous visit of seven years ago and attributed this wholly to the introduction of pure bred Shorthorn sires into that locality. It behooves all those interested in the production of more and better Shorthorns, and resultingly better beef, to give their support to this sale, at least by their attendance.

Forty animals will be entered in the sale, comprising 30 head of cows and heifers and ten bulls, all registered, and tuberculin tested. Auctioneer Earl Gartin of Greensburg, Indiana, will cry the sale. Mr. Gartin handled the big Calgary, Canada, sale in 1917, with great success and is himself a breeder of no little distinction.

At the Fair

The illustration on this page gives an idea of some of the stock which will be at the Riverside fair. We do not know whether this animal is to be offered in the pure bred auction sale but without question there will be some fine top notchers in the ring. stock which will be offered at this sale has been, in practically every case, personally selected by the livestock committee of the fair. They come from some of the very best herds in the state and include animals of intensive breeding and of great individual merit. This is the initial sale and

Meet Me at the Riverside Fair

Raleigh's Lady Flossie, Jersey, average first two months after calving, 50 pounds fat. Owned by George Thomas and Sons, Arlington. She will be amongst the aristocracy at the Riverside fair, October 7-11.

Secretary Van Pelt writes regarding the sale that:

"The auction sale of pure bred live stock which will be held on the two last days of the Southern California Fair is a feature of wonderful interest and advantage to ranchers and dairymen in this part of the state. The the committee is bending every effort to make it a successful one. Pure bred stock of all breeds and kinds are included and one of the greatest sales ever held in this part of the state will be a feature of the fair at Riverside on Friday and Saturday, October 10 and 11."

Milk Producers Buy Creamery

The Milk Producers' Association of Southern California met in Los Angeles last Friday and discussed the matter of purchase of the Burr Creamery of Los Angeles. This association produces about 200,000 pounds of milk daily and the purchase of the creamery is made in order to handle the surplus and at the same time to make a start in the general plan of "producer to consumer" in order to save one profit and give better prices to the consumer and better return to producer. The capacity of the Burr Creamery is about 70,000 pounds daily though at present it is running with one shift around 35,000 pounds. While this is only about one-third of the output of the association it is thought that its purchase will give control of surplus and will be sufficient to stabilize prices and put the association on a steady footing. Though the vote was entirely unanimous, there were occasional dissenting voices as to methods of procedure after the purchase was made. The Burr Creamery people have a valuable route and goodwill but the board of directors of the association felt that the plant would invoice up to the price made, $100,000. The goodwill is practically a bonus to members of the association. The board of directors was instructed to proceed at once with the details of the transfer but it is thought that it will be January first before the new management will have entire charge of the plant.

BELLER & BORDEN DUROCS

It was last spring that Beller & Borden at Carlsbad, purchased from Hewitt Bros. of Van Nuys the big prize winning senior yearling boar, Golden Cherry 5th. Fred De Vore pronounced this to be the largest yearling boar seen on the Coast. He is a son of the noted sire, Great Model. Today Beller & Borden have 18 high class sows bred to the service of Golden Cherry 5th. Perhaps half of this number will be reserved for the home herd but a number of these crack young sows will go out as foundation stock for other herds. These gentlemen have purchased foundation blood from the noted Slocum herd, as well as from other prominent Duroc breeders. They have fine alfalfa pastures and other facilities for the proper development of useful breeding stock. It is worth while to see those young sows and the boar to which they are bred.

ROSELAWN
Shorthorns at Public Sale
Thursday, October 16, 1919

ROSELAWN STOCK FARM

H. M. ELBERG
PROPRIETOR

WOODLAND, CALIF.

The sale of some of the choicest breeding animals from this noted herd provides one of the richest opportunities yet afforded in California for the purchase of high class Shorthorns to found new herds or to strengthen herds already established.

The herd itself needs no introduction to the buying public, for during its thirty years of development and ownership in one family the excellence of its cattle and the sound business principles of its managment have earned for Roselawn a commanding position in the breed's affairs in the west.

45 Scotch and Scotch Topped Shorthorns

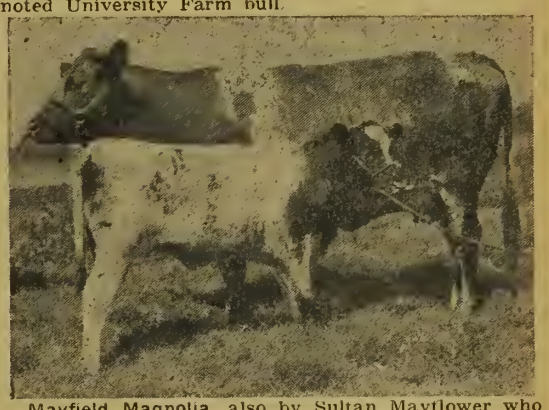
will constitute the offering in this sale, an offering that seems advisable to the owner at this time due to the settlement of an estate and the readjustment of some farm leases.

The females in the sale list are a group of notable average quality, including a large number of individuals that would be real attractions in any sale ring. Among them are MISCHIEF E 3D, the great show and breeding cow, undefeated in Canada, Grand Champion at 1918 California State Fair, and the dam of ROSELAWN CHAMPION, junior champion bull at the same show; ROSIE MAYFLOWER, an exceedingly good show prospect of rich breeding, her sire being Sultan Mayflower, the University Farm bull that sired the 1918 Chicago International champion Shorthorn steer, and the $5500 bull, California Model; MAYFIELD MAGNOLIA, also by Sultan Mayflower and selling with a promising roan heifer calf at foot by White Knight; PRIDE'S LOVELY 3D, a beautiful roan heifer of the Cruickshank Lovely family, bred to Roselawn Champion; PEACEFUL 5TH, by Golden Goods and selling with bull calf at foot by Crescent Dale; and a long list of cows and heifers of popular breeding and splendid quality. Among them are about 15 with calves at foot, and all of breeding age are in calf to Roselawn Champion or Crescent Dale. These are real foundation females.

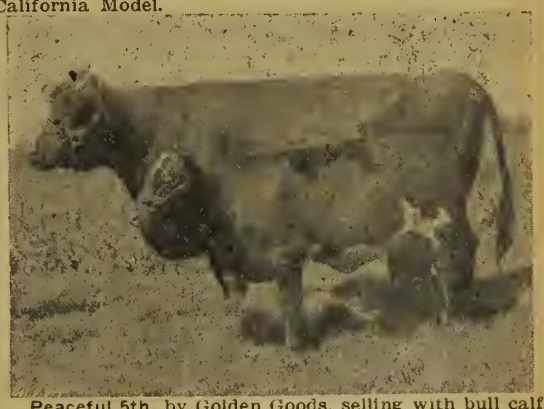
CRESCENT DALE

Mischief E. 3d, undefeated in Canada, Grand Champion 1918 California State Fair, and dam of Roselawn Champion, junior champion bull in same show.

Rosie Mayflower, one of the most promising heifers of the breed in the west. By Sultan Mayflower, the noted University Farm bull.



Mayfield Magnolia, also by Sultan Mayflower who is sire of California Marvel, champion Shorthorn steer at 1918 Chicago International, and the $5500 bull California Model.



Peaceful 5th, by Golden Goods, selling with bull calf at foot by Crescent Dale.

An Extra Choice Offering of Bulls

The exceedingly satisfactory list of bulls is headed by CRESCENT DALE who is being sold owing to the material reduction in the size of the herd. He is bred in the purple, being by Whitehall Rosedale, son of Avondale, and out of a daughter of Ruberta's Goods and the imported cow Crescent 8th. Crescent Dale is unusually smooth and thick fleshed, with a great deal of breed character, and already has a very promising lot of calves at Roselawn, a number of which will be in the sale. His combination of breeding, individuality, and proven ability as a sire stamp him as a worthy candidate for herd heading position in any breeding herd in the west. The list of bulls is completed by an especially well balanced offering of Scotch and Scotch topped individuals, presenting a most satisfactory selection for breeders and rangemen alike.

Every animal guaranteed to be a breeder. **Every animal over six months old tuberculin tested.**

Sale Begins Promptly at 1 P.M., Thursday, October 16

A NEW LAW

Every Dairyman should make a special effort to familiarize himself with the new State Feed Stuffs Law which becomes effective November 1st, 1919. This law was passed for your benefit, to protect you in the selection of your feed stuffs. It makes it possible for you to feed more intelligently and base the buying of your feeds on actual feeding value.

You know what you are feeding in roughage and no doubt what you should feed in a concentrate to strike the proper balance that gives a maximum milk yield.

What you want—is to know the analysis of the concentrate you feed and what simples are used in its manufacture.

You should know what kind of feed you are buying and buy a feed that will return a greater profit to you by way of increased milk yield.

Besgrade Dairy Feed is just such a feed—you can judge its real value, it comes to you tagged, showing analysis and ingredients.

Post yourself on the new feed law, passed for your benefit and also on the value of Besgrade Dairy Feed. Use the Coupon, it does not obligate you.

Great Western Milling Co., Los Angeles

Great Western Milling Co.,
Los Angeles, Cal.
Gentlemen:

Send me a copy of the New Feed Stuffs Law, also your pamphlet on Besgrade Dairy Feed containing analysis and ingredients of same.

Berkshires of Quality

Four Berkshire sows recently sold to the Italian Vineyard Company, Guasti, by Sandercock Land Company, Sacramento, for $2000.

IMPORTANT BERKSHIRE SALE

W. F. Sandercock has announced the sale of four exceptionally high class Berkshire sows to the Italian Vineyard Company, Guasti, for an average price of $500 each. The sale included the following: Wilsonia Princess Laurel, sired by Laurel Champion, and a litter mate to the Barker boar, Real Type. She is bred to Baron Duke, champion at the 1917 National Swine Show, Duke's Natomas Princess, sired by Baron Duke and out of Riverby Princess 3d. She was first prize junior yearling and reserve senior and grand champion at the recent state fair. Baron Duke Princess 11th, sired by Baron Duke and out of Riverby Princess. Riverby Princess was grand champion at the P. P. I. E. Duke's Natoma Rio Rookwood, sired by Baron Duke and out of Rookwood Lady 100th. Rookwood Lady 100th was champion at the National Swine Show in 1917. The purchase of the above sows will at once place the Italian Vineyard Company in the forefront of Berkshire interests in Southern California.

Live Stock News Notes

SALE CALENDAR

Holstein Cattle
October 8, Agee Brothers, Brawley.

Shorthorns
October 16, Dr. H. M. Elberg, Woodland.

Hereford Cattle
November 7. Third annual sale Pacific Coast Hereford Breeders' Association, San Francisco.

Poland-China Swine
October 7, Bassett, Ross and Crawshaw, Hanford.
October 11, Kings County Poland-China Breeders' Consignment Sale, Hanford.
October 18, Trewhitt, Vaughan and Nehis, Hanford.
October 21, Tulare County Poland-China Breeders' Association, Tulare.

Berkshire Swine
October 22. Western Berkshire Congress, Los Angeles Livestock Show.

Professor J. I. Thompson of the animal husbandry department, University of California, is attending the National Swine Show at Des Moines as judge of Berkshires. Thompson is considered one of the keenest swine judges in America.

A. D. McCarty, secretary of the California Poland-China Breeders' Association, is a visitor at the National Swine Show at Des Moines. While East McCarty expects to purchase several high class sows and perhaps a boar to add to the Riverina herd maintained near Modesto by McCarty & Starkweather.

Clayton N. Slocum of H. P. Slocum & Son, Duroc-Jersey breeders, Willows, has been invited to judge all classes of swine at the live stock show to be held at Tulare October 8-11.

The Western Berkshire Congress will hold a sale of Berkshires October 22 at the Los Angeles Livestock Show. About 40 head of bred sows and gilts will be offered. The sale will be managed by Frank B. Anderson, secretary of the congress, and Ord. L. Leachman will act as auctioneer.

Announcement has been made of a Poland-China sale to be held in Tulare, Tuesday, October 21, by the Tulare County Poland-China Breeders' Association. This sale will be held in the new live stock pavilion and is the first held by these breeders. Hugh C. Shinn, secretary, states that the sale will consist of 46 bred sows and gilts and four young boars. Every animal consigned to the sale has been selected by their committee and every animal will be a worthy representative of the breed. The animals consigned are by such boars as King's Timm, King's Big Bone Leader, King of the Golden Gate, King's Gerstdale Jones, President, and Big Bone Bob, and the offering will be bred to boars of equal note.

Guy Miller of Modesto reports the following sales: To John P. Daggs of Modesto the Jersey heifer calf Naomi of Venadera, a daughter of Altama Interest, to S. D. Kee of Bodega the yearling heifer Rosalpha of Venadera a daughter of Altama Interest. To F. D. Kimball of Chowchilla the Register of Merit cow, Fern of Venadera, test 401 pounds of fat in a year as a three year old.

Trewhitt, Vaughn, Nehls

Big Sale of

Big Type Poland-China Sows and Gilts

Hanford, Calif., Saturday, Oct. 18th, 1919

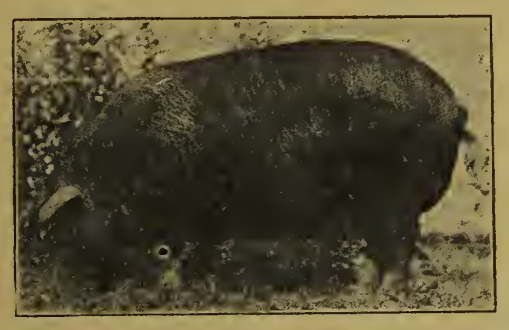
No Sale in the history of California has ever offered Poland-Chinas of such size, breeding, type and quality as you will find in this Sale. All bred to some of best Poland-China boars.

Mr. Trewhitt will offer My Giantess, by My Choice, by Big Fred out of a Jumbo Equal sow. This sow is high, long, deep, smooth, farrowed 10 last litter and bred to Model Jones by Giant Jones.

Hanford Belle, a large 700-lb. sow by Joe Wonder, has everything needed and bred to Iowa Wonder, by Big Long Wonder. 10 last litter.

E. Choice 1st, one of those big, typy sows by A. A. Wonder and bred to Iowa Wonder. You will like this sow. 9 last litter.

Another is T's Wonder by My Choice, and is one of those deep, typy, prolific sows we all want and she is bred to Model Jones by Giant Jones. 10 last litter.



THIS KIND WILL SELL

Mr. Nehls will offer 12 long, stretchy gilts, sold open, old enough to breed for spring litters and the kind that will make big sows. A combination of the blood of King's Model Longfellow, Frazier's A. Wonder and California Wonder.

Mr. Vaughn will sell Miss Orphan and Miss Orphan 2nd by Orphan Bob out of Big Bob's Beauty 2nd. These have the size and type demanded.

Sunlight Giantess and three litter sisters by Giant Jones, dam Jumbo Sunlight. Better ones don't grow. These were all purchased in the east last winter, personally selected and bred to Model Jumbo, by Walter's Jumbo Timm, from a Big Bob Wonder dam.

The above sows are just a few of those we will sell but gives you some idea of the character, approved type, prolificacy and wonderful blood lines—the greatest blood the breed affords will be found in this sale.

Don't overlook the importance of this sale of real breeding animals and another important fact, they all have good mothers as well as great sires.

Now this is the sale you have been *waiting* for, *longing* for, so make your arrangements now and attend this, the

Greatest Big Type Poland-China Sale Ever Held on the Coast

Due to the size of the offering the Sale will start promptly at 10.30 A.M. Lunch at noon. Geo. W. Bell, Tulare, is the Auctioneer.

Peanut Raising

By J. W. Mills

THE peanut crop is a valuable one as the entire plant may be used. The vines are nearly equal to alfalfa hay in feeding value, and the nuts have a food value for both the human family and livestock. The peanut is very easy to grow and is not subject to disease or injury from insects.

Climate and Soil

Peanuts do best in a light sandy, loamy soil which is well drained. The season should be long without frost as the peanut is susceptible to injury from frost.

Variety

The Spanish peanut is more extensively planted in the West. It is a small podded variety and has a heavy growth of vine desirable for forage. The nuts have a high percentage of oil. This variety is very hardy and particularly adapted for dry farming. The Valencia is another variety with nuts more desirable for commercial purposes.

Seed

Peanuts should be saved from hardy well matured vines, cured and kept dry during the winter.

The Spanish peanut may be planted in the pod, but large podded varieties are usually hulled. If the pods are soaked in water over night it hastens the germination, but they must be planted immediately. About two bushels of pods or one-half bushel of shelled nuts are required for an acre. If mice are bad the pods may be soaked in an emulsion of soap water and kerosene. Do not soak the shelled nuts.

Time for Planting

Plant the nuts in the spring, a little later than beans. The Spanish may be planted as late as June.

They are usually planted in rows from 28 to 36 inches apart and 9 to 12 inches apart in the rows. Cover with two inches of soil in light sandy soil, and less in heavy soils.

Cultivate the same as for beans. Keep the soil loose to prevent the loss of moisture. After the peanuts begin to form "pegs" stop all cultivation. In the later cultivation the soil should be worked to the plants so the pods may have a bed of loose earth in which to form.

Ripening

The yellowing of the vines is an indication of maturity, but care must be taken not to harvest too early as the nuts shrivel in curing when immature. In digging the peanuts, cut the tap roots below the nuts. Lift the vines and shake the soil from the roots. Turn the vines over and let the nuts dry in the sun. After a few hours place the vines in small shocks to cure. Vines dug late in the afternoon should be stacked the next morning as soon as they are dry. Too rapid curing is not desirable as the pods discolor and shrivel.

Antelope Valley Fair

An old fashioned fair with modern trimmings was that staged at Lancaster, the thriving metropolis of the Antelope Valley section of Los Angeles County, last week. It was not a live-stock show nor a pumpkin show; nevertheless there were on exhibition some of the biggest and finest hogs in the state, and some of the swellest pumpkins and squashes that California sunshine, soil and water can produce—all attesting the wonderful fertility of that section of Los Angeles County that has been fittingly dubbed the "milk bottle" of the city of Los Angeles.

Agricultural hall was well filled with a surprisingly large variety of products representing the output of alfalfa ranches, apple, pear and almond groves, as well as the grain growing sections of the valley.

A most novel feature of this fair was to be seen in the alfalfa palace, a structure designed to emphasize the leading feature of the valley's agricultural activities. The dimensions of the building were 55 by 100 feet, and about 700 bales were used in its construction, the pioneer rancher, J. L. Rector, being the designer and builder. As a public speaking and dancing hall the alfalfa palace made for itself a degree of popularity far beyond the anticipations of its most ardent admirers.

Among the general farm products exhibits may be mentioned the Harold True exhibit as having won first in the special prize contest instigated through the enterprise of the C. H. Lippincott Co. of Los Angeles. In this contest the True exhibit stood first, winning a $20 prize; the A. C. Pickens exhibit second, $15; the Elias Munz ranch third, $10, and the John Meder ranch fourth, $5.00. Among the highly commended were the Fred Godde exhibit, the A. C. Cissell exhibit, the Sunshine Ranch exhibit (O. F. Goodrich).

It was a splendid array of fruits, grains, grasses, roots, etc., commanding the admiration of sightseers, and calling into play the very keenest and best powers of the judges in making their final decisions as to comparative merits of all exhibits.

The Lancaster Feed & Fuel Co., and the Nicholls-Loomis Co. of Los Angeles were conspicuous with attractive displays in the line of alfalfa and other kindred products. The Globe Mills of Los Angeles had a fine display of their products.

A big tractor plowing demonstration was staged by Frank D. Waish, local distributer in the implement trade.

C. J. Gilbert had on exhibition his fine herd of registered Hampshire swine, and likewise Donald H. Graham showed a fine lineup of Durocs, with the noted Liberty Fair junior champion boar, Orioris King Gano, at the forefront. Both these are local herds. There were also smaller exhibits of Poland Chinas and Berkshires.

A public register kept at newspaper headquarters showed a registration of visitors from more than fifty towns outside the Antelope Valley. Many touring parties took occasion to visit the alfalfa and fruit growing sections of the valley. Also a big airplane from the Mercury aviation field ran on a 15-minute schedule on "bird's-eye" sight-seeing trips over the valley.

Secretary Frank B. Rutledge deserves credit for his efforts toward making this fair the success it has been against many odds not generally understood. However, the Antelope Valley Fair is a fixed institution that will grow bigger and better with each year of its existence.

IMPURE AND ADULTERATED SEEDS A MENACE

By G. H. Hecke, Director of Agriculture, Sacramento, California

One of the great sources of loss to the farmer, and one that is difficult to reckon in standards of money is the single item of "Impure Seeds."

1. They disseminate various fungous diseases.
2. They may carry the seeds of noxious weeds.
3. They may not be true to name, variety, or germinating quality.
4. They cause loss in weight through the admixture of trash.
5. The valuable strains of a given plant, which have won reputation for quality, may be broken down and destroyed through cross-pollination in the field and by careless admixtures of inferior seeds. Thus the period of life of any valuable commercial variety is lengthened or shortened according to the care that is exercised in keeping the original stock pure. The present condition which prevails to some extent in the Imperial Valley with regard to cotton seed is an illustration of this point. While we have succeeded, by strict quarantine regulations, in keeping out the boll weevil, yet the growers complain that pure varieties have been destroyed by cross-pollination. This demonstrates the

necessity for cooperation among the farmers and growers toward preserving the purity of desirable types.

The British government in Egypt has recently determined that more rigid regulations are necessary in the growing of cotton, for investigation shows that the qualities which made Egyptian cotton world-famous are being broken down through cross-pollination in the field and careless mixing at the ginneries with inferior varieties.

In our efforts toward big production we must not lose sight of the importance of maintaining the purity of standard types, in order that quality may result as well as quantity.

The old state commission of horticulture has endeavored to secure state legislation which will regulate the seed trade. but so far such efforts have been unsurressful. As to the department of agriculture, we intend to keep working at this important measure. Fully one-half ef the states in the Union now have seed laws preventing the sale of weed infested seed and seed of low vitality; the result is that seeds which can not be sold in such states will very likely be disposed of to states having no regulations against impure seeds. In order to protect the farmer in his efforts to maintain pure varieties he should be assured of a supply of pure seed, and this necessitates care on the part of both the growers and the dealers.

Let us compare this situation, impure seeds in interstate traffic, with other commodities that are marketed —and, too, regulated by law. Take, for instance, pharmaceutical preparations—under the pure food and drugs act of June 30, 1906!

Why do thousands of cases receive condemnation every year?

(1) Misbranded — the label sets forth ideas and statements that are misleading and untrue!

(2) They contain matter deleterious to health of man or animals!

(3) They contain an excessive amount of inert or worthless matter to give them bulk!

Then what of seeds, exploited by seed houses, that enter interstate traffic?

(1) They are misbranded as to quality and germinating power!

(2) They may, unless sterilized or fumigated, carry noxious insects, weeds or diseases!

(3) They may be adulterated with straw, chaff, hulls, or other inert or worthless matter, to give them bulk!

CORN BORER A REAL PERIL

The European corn borer undoubtedly is a serious menace to American agriculture. The United States department of agriculture has for some time called attention to the extreme danger from this pest, which has become well established in both Massachusetts and New York. Now comes this reinforcement of that judgment:

"We, the National Association of Commissioners of Agriculture, with official entomologists from many states and representatives of the United States department of agriculture, together with representatives of the Canadian government, present as experts in conference upon the situation, express ourselves, after examining the infested area, as thoroughly convinced that this pest is one of the most dangerous insects which has become established in America, and we hereby place ourselves on record in favor of most energetic efforts on the part of federal and state agencies to control and, if possible, to exterminate this insect, including in the program vigorous quarantines to prevent its distribution."

That is a part of the resolutions adopted by the European corn-borer conference, begun at Albany, New York, on August 28 and concluded at Boston, Massachusetts, on August 29. The state commissioners of agriculture, state entomologists and others went over the corn fields around Schenectady, New York, and Boston, Massachusetts, and saw the methods of destruction practiced by the United States department of agriculture and the state agencies, together with the damage caused by the borer.

Questions and Answers

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Burned Orange Trees

Our house burned a few weeks ago. Facing the site of the building, and about thirty-five or forty feet distant is a row of orange trees. For some time it seemed that the scorching of the leaves and twigs on the side of the trees next to the fire was the extent of damage done but lately the bark on the trunks of three of them has split and fallen off while still another one, that showed no signs of being scorched, is drying up. We have kept them as well watered as usual. Is there any sort of treatment that will save them?—Subscriber, Fresno.

There is nothing that can restore the tissue which has been destroyed by the burning building but if the greater part of the tree is still living removal of the dried and cracking bark and coating the trunk over with grafting wax will probably prevent undue cracking and will undoubtedly heal over the wound. As an aid in preventing the decay of the trunk it might be well to coat over the wound with Bordeaux or some other antiseptic mixture before the grafting wax is applied. If, however, the heat has destroyed the greater portion of the bark on the trunk it might be impossible to save sufficient of good bark to heal over quickly.

Diseased Liver in Rabbit

We are raising a few rabbits for our own use and when we killed one found the liver coated with white spots. What is the cause and what can be done to cure it or prevent it? I feed barley once a day and some alfalfa and they have plenty of water to drink. Their cages are always kept clean.—Subscriber, Aromas.

"Practical Rabbit Keeping" recommends the following:

"Rabbits suffering from this complaint have difficulty in breathing, which is heavy and quite audible. They, however, eat well, and with the exception of a dull, listless appearance seem in good health. With correct feeding and green food in season, particularly dandelion, rabbits rarely suffer from liver complaints. Should the liver become diseased or chronic inflammation set in, the patient had better be destroyed and thus put out of its misery, as the chances of permanent cure are exceedingly remote."

GAME LAWS FOR 1919

The United States department of agriculture is mailing to all who request it Farmers Bulletin 1077, "Game Laws for 1919." It is a 78 page bulletin giving a summary of the provisions of federal, state and provincial statutes.

THIS MONTH

Continued from Page 447.

combe Pink. Tulips thrive only in good rich soil and they should be planted one and one-half times the depth of the bulb and spaced three inches apart in the row or group.

Other bulbs which deserve mention are the earliest of all: snowdrops, crocus, and the little known grape hyacinth. These may be planted near the edge of the border as they are not giants. Last but not least in importance are the freesias, those very fragrant flowers in white, yellow, and lavender shades recently developed. They are valuable in the garden or grown in pots, if the last named method is adapted six to eight bulbs are planted in a five-inch pot and treated as advised for the other bulbs. Iris, liliums and anemones will be dealt with next month; in the meantime get your order in for the selections named.

Subjects for Sowing Now

Alyssum saxatile; Anchusa, Perry's Variety; Bellis perennis; Aubretia hybrids; Myosotis or forget-me-not; pansy and viola, Sweet William and hollyhock. Sow all these in a well prepared border in a warm situation.

LIVE STOCK NEWS NOTES

Continued from Page 456.

ports the sale of their prize winning six months old boar, Castleview Rival Duke to D. J. Bastanchury, Fullerton. The price was very satisfactory considering the age of the boar and he will be developed to head the herd now in the process of formation by Mr. Bastanchury on his ranch near La Habra.

J. Francis O'Connor, proprietor of the Castleview herd of Berkshires, plans to exhibit at the Riverside fair, the Los Angeles Livestock show and The California International Live Stock show to be held at San Francisco. O'Connor was one of the successful exhibitors at the state fair.

California cattlemen who attend the Los Angeles and San Francisco live stock shows will probably have an opportunity to see the two year old Shorthorn bull, Gainford Matchless, recently brought to this state by Edward Cebrian to serve in the Caledonia herd. Gainford Matchless is counted one of the best bulls ever brought West. He was first prize senior yearling at the 1918 International.

Tilly Alcartra, the famous Holstein cow owned by A. W. Morris & Sons of Woodland, has gained such a national reputation that her owners have been put to quite a test in answering the hundreds of inquiries regarding this remarkable dairy machine. Accordingly the Morris' have issued a 12 page booklet detailing the story of Tilly up to her tenth year. The story is written under the following chapter headings: "Tilly's Production Records"; "Tilly's Prize Winnings"; "Tilly's Individuality"; "Tilly as a Breeder," and "Tilly as a Dairy Cow."

L. J. Belknap, M. D., of Jersey Queen Farm, San Jose, has just purchased from Jack Borge of Dos Palos eight head of Duroc-Jersey sows and gilts that represent some of the best of the Elmer Lamb breeding. Included in the purchase were two junior gilts out of Lulu Wonder and four sows by Orion Model. These sows, together with those recently received from the East, give the Jersey Queen Farm a herd of 20 high class sows. Most of the sows have been bred to a grandson of Golden Uneeda, an exceptional brood sow.

The 6500 acre Tagus ranch, near Tulare, owned by H. C. Merritt of Pasadena, has been sold to Morris & Trexler. This ranch is regarded as one of the most valuable in California and the purchase price was near $1,000,000. For a number of years it has been the seat of extensive live stock operations and during the past year has been the headquarters for the Merritt-Bowers Company.

California Hereford breeders will have an opportunity to measure their strength with one of the good herds of the East when the show herd of the Wyoming Hereford Corporation of Cheyenne, Wyoming, comes West to exhibit at the Los Angeles and San Francisco livestock shows. The Wyoming herd is not only one of the largest collections of the breed owned in America but is rated as an exceptionally high class herd. The herd was seen at Los Angeles last year.

R. J. Yates, Poland-China breeder of Orland, has recently sold to J. L. Long of Bend two senior gilts sired by Long Jumbo, the Yates herd boar.

W. J. Higdon, Holstein breeder of Tulare, has recently sold to L. E. Prestage, Porterville, an 18 months old bull out of the 34 pound cow Caloma Beauty Butter Maid by a son of Segis Pontiac De Kol Burke.

The Famous Hardie Junior is a Real Power Sprayer

It has sufficient capacity for two lines of hose. It has plenty of power for high pressure effective spraying. It is little in first cost, weight, and upkeep. It is big in real value, engine power, pump capacity and ability to do successful spraying. We believe this is the greatest small power sprayer ever manufactured, and placed on the market with phenomenal success in every fruit section in United States and vouched by thousands who own the Famous Hardie Junior. Equipped with 1½ horse-power engine, battery ignition, 150-gallon tank with mechanical agitator, capacity of four gallons per minute with a steady working pressure of 200 pounds, and two 25-foot of the best spray hose, fitted with spray rods and nozzles; 4-inch tire truck with pole or shaft.

All for $315. *Delivered anywhere in this state*

If truck is not needed, deduct $55.00.

These prices are subject to change without notice. The wise buyer will place his order now.

This low price is made possible by big production.

If you are interested in other types and sizes of the HARDIE POWER SPRAYER, write us for the big spray catalog, and learn why we can offer more spray pump value than any other spray pump manufacturer.

The HARDIE ORCHARD GUN is $12.00, none better. Every one is guaranteed to give satisfaction to the user, or his money refunded.

The Hardie Spray Hose is the safest hose to buy.

The Hardie Manufacturing Co.

WHERE TO BUY YOUR

herd bull. We can be of material assistance to you in solving this question.

Sir Veeman Korndyke Pontiac

Our senior herd sire is a son of Sir Veeman Hengerveld, the sire of more 30 pound cows than any living sire. Five other sires bred for production. A good sire will increase your milk production. We have increased ours 100 per cent the past two years. We can sell you a young bull at a very reasonable price.

BURR FARM, Los Angeles, Calif.

Breeders of Registered Holsteins

Farm at E. 26th St. and Downey Road

Business Address, 8th St. and Towne Ave.

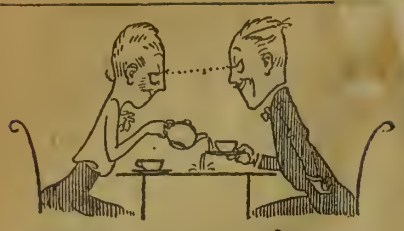
GOING FAST, SO ACT QUICKLY

Five young Holstein bulls have left Sunnyside Farm past month to head other herds. We have for sale a few select sons of Sir Veeman Korndyke Pontiac by Sir Veeman Hengerveld, the sire of more 30 pound cows than any other living sire. Full description and price on request.

R. F. Guerin Breeder of Holsteins Visalia, Calif.

Make the reading of advertisements in the California Cultivator a habit.

They will broaden your knowledge of the manufacturing improvements.



When you make your tea, the tea-flavor develops first—and that's what you want: tea-flavor, not tannin. Tannin then comes along and smothers the tea-flavor.

Common tea is older leaves with lots of tannin and very little tea-flavor.

Good tea is young tender leaves with abundance of fine tea-flavor and very little tannin.

That's why a pound of fine tea makes more cups of real tea-flavor than common tea does. And the flavor is infinitely better.

Schilling Tea costs ⅓ cent per cup for rich fine invigorating tea.

There are four flavors of Schilling Tea—Japan, Ceylon-India, Oolong, English Breakfast. All one quality. In parchmyn-lined moisture-proof packages. At grocers everywhere.

A Schilling & Co San Francisco

TO BANISH LONELINESS

O lonely heart set thine own chords in tune;
With discord's self, divinest music jars;
Then shalt thou learn Love's everlasting rune,
And chant the anthem of the morning stars.

For thee shall all creation have a voice.
And flowers and birds and angels round the throne
In one glad chorus sing to thee, "Rejoice"!
The heart that loveth never is alone.
—Lucy Fountain.

VALUES

I little care how tall you are,
Nor if you're small how small you are,
The thing that matters most to me
Is not how big your body be,
Nor how much cash you've stored away,
Nor on the scales how much you weigh,
But how much Soul you've set apart,
And what's the measure of your heart,
And in your share of stock preferred
What is the value of your word?
If these be always kept at par
It matter not how small you are,
Nor on what lowly planes you press
You've won success!
—John Kendrick Bangs.

SKATING TO COLLEGE

IN MY sophomore year I undertook to skate from my home on the Salmon River seventy-five miles to my college at Fredericton, New Brunswick. I never made a second attempt.

I had come home to a mild Christmas, but shortly before the end of the holidays the weather turned cold, and thick ice formed on the little Salmon. I should have to cross a wide lake and finish on the St. John River; as I felt sure that the lake ice would be as thick as that on the Salmon, I persuaded my family to let me undertake the trip.

The early sun was sparkling on the house roof and the frosted haystacks when I started. The morning was fine, and the ice, although half a foot thick, so clear that I could see stumps and leaves through it as clearly as through glass.

I saw also some floating cakes of ice, which told me that a break had occurred upriver. This caused me my first anxiety; I wondered if, after all, the lake might be open.

I was not long in suspense, for in 25 minutes I had covered the six miles of the Salmon and got a glimpse of the lake—solid as steel and glistening in the sun.

"Good enough!" I exclaimed in satisfaction; and soon I was clear of the mouth of the river and skimming over the smooth inland sea.

In one of the coves I saw some boys playing hockey. Over to my left, two men with poles came sweeping in long, graceful strokes toward the mouth of the Salmon. Now and then they would raise their poles and bring them ringing down upon the ice.

Their caution made me suspicious, although I could not see that the ice was becoming any thinner. As they neared me one of them shouted:

"Did you come down river?"

I nodded.

"Ice all right?"

"It is for six miles, anyway," I answered.

"That'll do," said the man, and he threw his pole down on the ice, as if he were glad to be relieved of it.

I picked it up, thinking it might be useful in testing the ice, and then struck out for a low point of land seven or eight miles below on the western shore of the lake. The wind that had helped me down the river now blew stiffly on my right shoulder, and sometimes veered round and stung my face.

Halfway to the point, I came suddenly on a strip of open water about four feet wide. I approached the edge cautiously, striking hard with my pole. The ice seemed perfectly strong, and I thrust my pole under the edge on the other side of the gap. It seemed six inches thick.

Although I had known of the ice bulging in ridges, sometimes seven or eight feet high, this open lane mystified me. However, I did not waste much time trying to account for it. I skated back some fifty yards; then, darting forward, I crossed the crack at a leap, and sped on toward the point.

But as I neared it I found another lane of open water stretching across the lake from the tip of the headland. As this was too wide to jump, I made for the shore, hoping that, after crossing the point, I should find solid ice on the other side.

The distance across was short, and my skates were so well strapped on that I did not want to remove them. So, on reaching land, I got down on my hands and knees and crawled.

When I saw that on the other side all was ice, I felt immensely relieved. Soon I was striking off again for another point ten or eleven miles below. The wind had increased and began blowing directly off the western shore.

Far in front of me and to my left a low mist hung over the ice. It lifted when I was well in toward shore, and I saw open water within a quarter of a mile. Then I began to hear the loose cakes grinding and the waves breaking on the edge of the ice.

I struck in toward the western shore intending to land and walk across to the St. John. And then I learned my true position—the whole body of ice was swinging off from the shore in the wind!

The blue line, stretching for miles along the land, was growing wider every moment, and I saw that my only hope was to hasten back to the point I had left a short time before and go ashore there.

I rushed off on my ten-mile skate, the wind helping me a little. Off to the east, as far as I could see, there was open water, and I realized that if the ice drifted out into the middle of the lake it would not be long before it was broken up by the swell. It was not altogether with exhaustion that my heart throbbed heavily as I at last neared the point. Straining my eyes I saw, not a narrow blue line shutting me off from shore, but the ice piling ten or fifteen feet high on the rocks.

This, however, was only at the extreme tip of the point; everywhere else along the projecting land was open water. I must take the risk of going ashore on the rocky horn with those grinding masses of ice.

Had it not been for the great ridge of cakes already deposited, the venture would not have seemed so hopeless. But sometimes a huge floe of the ice would rise on this embankment; then, as it broke, cakes almost as wide as the side of a house would lap back and smash into fragments on the oncoming crush behind. And all the time the ice seemed to be running faster and piling higher.

I noticed that when a big cake went up and fell back it was generally some minutes before the same thing happened again. I dashed forward, and in another moment felt myself upon the moving slope.

When I had struggled as far up as I could, I set my skates at a wide angle and stooped until my hands touched the cold, moving wall before me. If my skates should slip, it would be the end. The great cake bore me steadily up—higher, I thought, than any had gone before. The crunching, grinding and swaying, the roaring of the ice as it fell back on itself or as it plunged down fifteen or twenty feet into open water, were deafening and appalling.

The cake took me almost to the very inner edge of the great ice rampart. Then, as the floe broke behind and below me, I sprang in among the smaller pieces on the summit, and went rolling, clinging and tumbling down to the rocks. I was inside the wall of ice—safe!

Although I felt bruised, my bones seemed whole enough, and I was still determined to get to Fredericton, on skates. Finding a farmhouse near at hand, I paid the owner a dollar to drive me over to the St. John. There the ice was fine, and by seven o'clock that night I had covered the thirty miles to the college.—Youths' Companion.

A THIRST QUENCHER

To assuage thirst and cure feverishness, apple tea is a notable sick drink. It is made by slicing up raw apples into a jug, filling up the jug with boiling water, as in tea making, then sweeting to taste. When cold, this **apple tea** will be found pleasingly tart and refreshing.

ABOUT CLOTHES

We recently saw in an exchange a bit of common sense advice as to clothes which appealed strongly to us so we pass it on to Cultivator readers:

How do you choose a pattern? One that you like the appearance of, to be sure. That method will prove satisfactory for the best frock, but more than appearance should be considered in a pattern for the play and work aprons and dresses and the everyday underclothing.

Next to appearance is simplicity in the making. Choose the pattern with few and simple seams. Consider the number of buttonholes. Not alone in the making but in the subsequent care is this worth considering, for buttons have a way of pulling off and buttonholes a tendency to tear out that means continual mending. One busy mother makes rompers that require six buttonholes. Another's pattern demands eighteen! Nor is it one bit more convenient or better looking. Think of this before buying the pattern.

The popular "slip over" garments are easily made and usually require no buttons or buttonholes. This style of pattern has many other advantages. It is ideal for little play dresses and aprons. Every mother knows that play dresses wear out first in the front where they are subject to hard washing and wear. Being exactly alike back and front the "slip over" can be worn so as to distribute the wear and will last much longer. This is equally true of "nighties" which usually wear out first at the back.

The objection is frequently made that the neck of slip-overs must necessarily be cut large to allow the head to pass through and consequently is too low for any except very warm weather. This objection may be overcome with any pattern by cutting the neck much smaller and leaving one or both shoulder seams open a few inches from the neck. Close with a button and buttonhole or a dress-snap.

Consider the ironing when choosing a pattern. The "alike back and front" garment is so easily ironed and is a boon when a mechanical ironer is employed. Next to this, the apron or dress which opens out single is easy to launder. Confined gathers and elaborate trimmings are out of place on the garment that pays a weekly visit to the washtub.

The wise choice of a pattern saves time and material in the making, and saves work in the care of the garment as long as it lasts.

CARE OF SHOES THAT PAYS

Have shoes carefully fitted. Well-fitting shoes look better and wear better, besides being more comfortable. Poor quality shoes are seldom economical.

Alternate two pairs; they last longer. Slip shoe-trees into shoes when you take them off; it makes them keep their shape longer.

Keep shoes clean and well-brushed; a dressing made with a little oil and well rubbed in prolongs the wear of leather and kid.

Clean canvas shoes on shoe-trees to prevent shrinking. Sponge with a little water and soap that contains whiting or use a commercial cleaner.

Dry wet shoes slowly on shoe-trees or stuffed with paper.

Protect shoes with rubbers in wet weather. Even with careful drying the moisture tends to rot the sewing threads.

Do not wear run-down heels; they spoil the shape of the whole shoe.

Have small rips mended at once; often they can be sewed at home.

TO MAKE THEM WEAR LONGER

Reinforce, in making, parts subjected to hard wear. Sew buttons on children's garments through several thicknesses of cloth to prevent tearing out. Run a few threads back and forth in the heel and toe of a new stocking.

Darn promptly small holes in stockings and other knitted underwear. A stitch in time saves the garment. Rub a piece of soap across the end of a run to stop the run until you can mend it.

Wash stockings frequently. It prevents continued strain on the same part of the stocking, and rotting and change of color from perspiration.

Wash new stockings before wearing to remove the sizing; otherwise holes may appear at once.

SANITARY FLOORS

We have arrived at the stage in civilization where we want everything else sanitary, so why not floors? The physician tells us that dust and dirt are prolific sources of disease. Cracks in floors, while being unsightly in appearance, harbor an unbelievable quantity of dirt.

A new floor, if properly laid, is free from this disagreeable feature, but in the course of time these cracks will begin to appear due to the shrinkage of the wood. For this identical condition paint manufacturers make and sell a specialty known as "crack filler." If all floor cracks are filled with this material, the accumulation of dust and dirt will not be in evidence. Thus you may be assured of a sanitary floor surface and sickness may be avoided. It is a simple matter to remedy; just clean out the dust and dirt from the cracks with some sharp pointed instrument and then thoroughly clean out with a scrubbing brush, soap and water. When dry, the crack filler may be applied. It is made in stiff paste form and should be applied with a putty knife in much the same manner as putty.

To make the job complete the floor should then be waxed, varnished or painted, depending, of course, on the present finish and the effect desired.

BURNING MONEY

Life is gay and blithe and sunny since the peace dove hit the breeze; every one is burning money just as though it grew on trees. I insist on thrift and saving, but there's none to heed my words; Johnnies say that I am raving, and throw money to the birds. Men are drawing princely wages, and their breasts are filled with mirth, and they jeer foreboding sages who predict a day of dearth; but that day will come as surely as tomorrow's sun will rise; things will then be going poorly with the giddy spendthrift guys. Things won't boom along forever as they're booming now, my friends; and the man who's truly clever saves as ably as he spends. It is patent to the knowing, in expansive times like these, that the kopecks won't be growing always on the shrubs and trees. There will come a day of trouble, when this boom is left behind, and the kopeck and the ruble will be mighty hard to find, happy then the lads whose wages have been safely placed in brine, who obeyed the seers and sages, when the saving graft was fine. And how sick will be the mortals who like spendthrifts now behave, who reply with jeers and chortles when we call on them to save.—Walt Mason.

LITTLE DIFFERENCE

A man said to a fisherman, with a bitter laugh:

"My friend, your time can't be very valuable. I've been watching you for two hours, and you haven't had a bite."

"My time's worth too much," the fisherman replied, "to waste two hours of it watchin' a man fish wot ain't ketchin 'nothin'."—Washington Star.

NO UMPIRE

"Are you in favor of protection or free trade?"

"It's a delicate question," relpied Senator Sorghum. "There is a difference of opinion among my constituents as to which I really favor. And I don't propose just now to break in and try to decide any disputes."

THE LAST LAP

Knicker—"How long does the cook promise to stay?"

Mrs. Knicker—"She says she will finish breaking this set of china."—New York Sun.

THE LOGIC OF IT

"De man dat looks out exclusive foh 'number one,'" said Uncle Eben, "mustn't be surprized if he finds himself cuttin' a purty small figger."—Washington Star.

SMILES

Charles Clees says: "Smiles are made to show the heart, not the teeth."—Philadelphia Cultivator.

Baldwin

A Name that Stands for Real Worth in PIANOS *and* PLAYER PIANOS

The executives responsible for Baldwin policy wish the name to stand for superior musical worth. Every Baldwin workman is imbued with the thought that he is making musical instruments. Art is the life spark of the Baldwin organization ever urging it onward to the goal of satisfaction in pianos and player-pianos.

But with this Art there is combined great industrial strength, making for the most economical production. Raw materials are bought in immense quantities and therefore at the most favorable figures. Two immense factory groups provide the facilities for the manufacture of practically every part, thus eliminating the profits that the maker of an assembled instrument must pay to parts manufacturers. The Baldwin plan of selling direct through exclusive Baldwin dealers does away with jobber and other middlemen, placing the instrument in the home at the lowest possible price.

SONG BOOK FREE!

Send your name and address and we will mail you "Songs of Long Ago", words and music complete of 26 favorite songs. We will also tell you how you can hear and try any of the Baldwin-made instruments, the Baldwin, Ellington, Hamilton, or Howard Piano, or the Manualo Player-Piano.

ALMONDS

California Almond Growers Exchange opening prices:
Nonpareil @32¼, IXL @31½, Ne Plus Ultra @30½, Drake @23½.

Citrus Markets

Los Angeles, October 1, 1919.

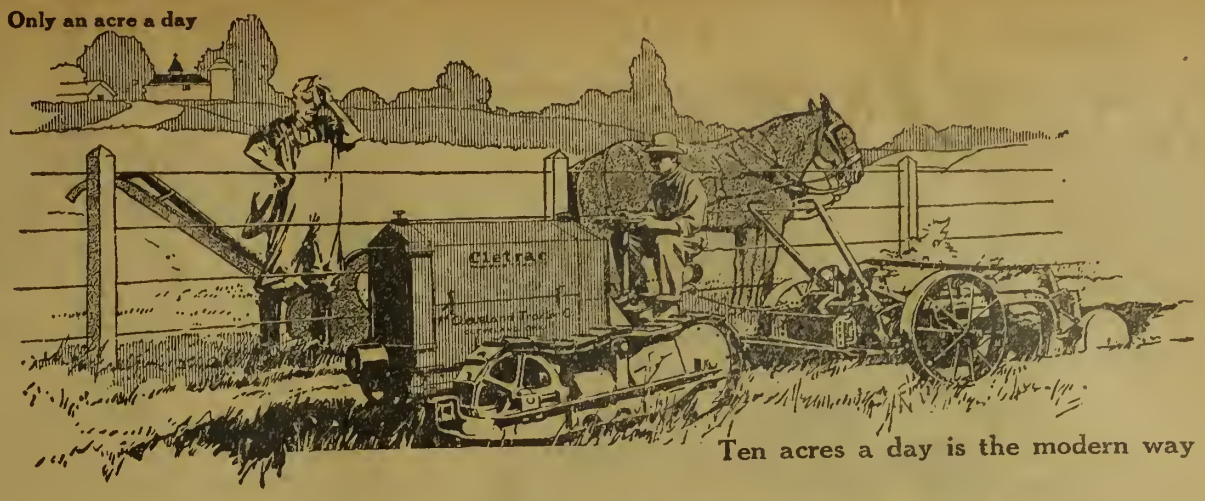
The car shortage has affected shipments, nearly 100 cars a week being cut off. This has resulted in creating a demand for the few which have gone forward and good prices are prevailing. St. Louis and other Middlewest points are, however, paying lower prices. There are still nearly 3000 cars of Valencias to go forward. The holdovers will, however, fill requirements when Navels are usually going forward. Navels will be later than last year.

Lemons are exceptionally strong, $7.00 and $8.00 prices being secured in auctions.

Shipment

Shipments of citrus fruits to date since November 1, 1918; Southern California: Oranges, 32,654 cars, lemons 9178, total 41,832. To same date last season: oranges, 12,862, lemons 6566, total 19,428. Central California this season: Oranges, 4427, lemons 354, total 4781. To same date last season: oranges, 2539, lemons 115, total 2654. Northern California: oranges, 244, lemons 2, total 246. Last year same date: oranges, 203.

Only an acre a day



Ten acres a day is the modern way

Which side of the fence are you on?

Are you a one acre *laborer*—or a ten acre *farmer*?

Do you cling to old, slow, out-of-date animal labor—or are you farming the modern way with the Cletrac?

The Cletrac Tank-Type Tractor enables you to do *more* work and *better* work *more* days in the year—with *fewer* men, *shorter* hours and *less* expense.

It produces *larger* and *better* crops at a *lower* cost thus materially increasing *your profits*.

It plows, harrows, plants, reaps, binds, threshes, cultivates, hauls, saws—does practically all the things that your horses, mules and stationary engine used to do—and does them *better, cheaper* and *faster*—requiring considerable *less man labor* to accomplish the *same amount of work*. You—or your wife—or your boy, can operate the Cletrac and do as much work with it as was formerly done by *three* men and *three* teams.

The Cletrac runs on metal tracks like a locomotive. It goes over the top of the ground,—doesn't sink in, doesn't pack down the earth even when it is freshly plowed. No power is wasted in moving the machine itself *through* the soil.

C. HENRY SMITH, General Agent
Pacific Coast and Hawaiian Islands
311 CALIFORNIA STREET SAN FRANCISCO

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS, MARCH 21, 1916.

of California Cultivator, published weekly at Los Angeles, Cal., for October 1, 1919.
STATE OF CALIFORNIA,
County of Los Angeles, ss.

Before me, a Notary Public in and for the State and County aforesaid, personally appeared Frank H. Thomas, who, having been duly sworn according to law, deposes and says that he is the publisher and business manager of the California Cultivator and that the following is to the best of his knowledge and belief, a true statment of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse side of this form, to-wit:

1. That the names and addresses of the publisher, editor, managing editor, and business manager are:

NAME OF—	POST OFFICE ADDRESS
Publisher, Cultivator Publishing Co.,	Los Angeles, Cal.
Editor, C. B. Messenger,	Los Angeles, Cal.
Managing Editor,	
Business Manager, Frank H. Thomas,	Los Angeles, Cal.

2. That the owners are (Give names and addresses of individual owners, or, if a corporation, give its name and the names and addrsses of stockholders owning or holding one per cent or more of the total amount of stock).

Cultivator Publishing Co.,	Los Angeles, Cal.
Frank H. Thomas,	Los Angeles, Cal.
R. M. Teague,	San Dimas, Cal.

3. That the known bondholders, mortgagees, and other security holders owning or holding one per cent or more of total amount of bonds, mortgages, or other securities, are: (If there are none, so state.)
None.

4. That the paragraphs next above, giving names of owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholders or security holders appear upon the books of the company as trustees or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities as so stated by him.

5. That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is ——. (This information is required from daily publications only.)

FRANK H. THOMAS, Manager.

Sworn to and subscribed before me this 23rd day of September, 1919.
(SEAL.) ROBERT WHITFIELD,
Notary Public in and for Los Angeles County, Cal.
(My Commission expires April 4, 1923.)

MALTHOID
and
RU-BER-OID
READY ROOFINGS

Good ready roofings consist of felt, saturated and coated with waterproof materials.

Sun and rain, however, are respecters of neither persons nor things, and the continued protection afforded by any roofing—its lasting ability—depends absolutely on the quality of the materials that go to make it.

That is why we maintain our own refineries for turning out saturating and coating compounds of the quality needed to make Malthoid and Ru-ber-oid Roofings *long-lasting.*

Pictured above are some of the huge stills used for this purpose. Crude oil is carefully distilled by a special process which retains the natural life and vitality of the asphaltic residues. These residues are then scientifically combined into highly waterproof and sun-resisting compounds.

Tough, long-fibre, wool-and-cotton felt, made in our own mill, is first saturated and then coated with these special compounds, to make Malthoid and Ru-ber-oid Roofings—all under the care of experts, and with the most modern machinery.

We have been making ready roofings for 35 years. We are particular about quality because experience shows that *quality* roofing is the only kind that will not rot or dry out, and that is fire-resistant. Malthoid and Ru-ber-oid are therefore economical to use on barns, homes, sheds, shops, garages or factories. The price is higher, but the cost is less.

Eggs Without Electricity

By Jean A. Koethen

THE use of electricity in the laying house is so generally recommended and so generally practiced by California commercial poultrymen that the position of the minority who neither use nor recommend making the hen's winter day as long as her summer day invites interest and challenges respect. I found such a man in Riverside last winter. He declared that his hens were making a higher egg record in the old way than were those of his neighbors who lengthened the day. Recently I found another, a large commercial poultryman, too, in the Burbank district.

The advocates of electric light argue that hens lay fewer eggs in winter than in summer because the day is shorter. Instead of getting out at five they doze on the roosts till seven, and instead of working till seven in the evening, they go to bed at five. Here are four perfectly good hours lost in December and January. Why not provide artificial daylight for these four hours and so give the biddies a chance to eat more and lay more eggs?

I hold no brief for either side. The "ayes" seem to have the best of the argument, and so I am willing to join the procession. My personal sympathies, however, are all with the "noes," for if a hen hates half as badly as I do to get up before daylight she is greatly to be pitied. The daylight saving scheme was lovely for folks who can lie till eight every morning, but for the poor commuter who must hustle off at seven summer and winter it was no joke. And so I would rather do without an extra egg or so and let poor Biddy have the winter morning sleep she has earned through long summer days of scratching. However, as I said, the "aves" have it. Only let us hear what the "noes" have to say.

Section of Laying House

Notice the wooden shades which may be raised or lowered or placed at any angle to protect from sun or rain or wind. Notice also the wooden shelter under which the hens are gathered around their mash trough.

On One San Fernando Ranch

On the Nielson poultry ranch, owned by two Nielsons, father and son, there are 400 hens and pullets in the laying houses, which cover a good part of the ten acre ranch. The rest, outside of residence and garden, is planted to green stuff, one and one-half acres being in alfalfa, which is the main dependance for green feed. The ten laying houses which accommodate 400 hens each, are each fifty feet long and sixteen feet wide, and all have cement floors. The double yard system is followed, the yards being alternately planted to barley and opened to the hens. This system keeps the soil sweet, for there is nothing but a green crop that will thoroughly purify the soil of a poultry yard.

University Rations

The ranch is run strictly according to experiment station methods, but the owners do not consider it necessary to follow any one station in all respects. In raising their baby chicks they follow the California station in both management and feeding, but their laying ration is that of the Missouri station, which is as follows:

Scratch feed: two parts wheat, one part milo, one part corn. This is fed at night, one and three-fourths ounce being allowed to each hen. As the grain is measured by the sack it is easy to figure out how much must be allowed to each house.

Dry mash: one hundred pounds each of bran, shorts, corn meal and beef scrap. This is kept before the hens in hoppers, and is never moistened. Cut alfalfa is fed at noon in troughs, a full tub being allowed for each five hundred hens.

On this ration, which offers both balance and variety a good egg yield and strong fertility are assured. Corn is considered an essential part of both scratch feed and mash because the nights in this section are uniformly cool. "We don't know anything about hot nights here in California," declared the younger Nielson, who had just returned from a summer trip to the middle west, "and our Leghorns need corn the year round to keep them from chilling at night."

The Oregon method of feeding chicks, namely, keeping coarse corn meal and beef scrap before them in separate hoppers, was tried with one lot of pullets last year, and while the birds made good growth, it was not quite so good as that of the birds fed on the California ration.

Cull by Color

The color test, as recommended by Professor Dougherty, is carefully followed in culling out the slackers. Culling is commenced in May and continued till August, the birds being gone over on May 15, June 15, July 15 and August 15, or as near as possible to those dates. "We go most by the vent," said Mr. Nielson, "when that is yellow it invariably means that a hen has stopped laying." The Hogan system is also followed and the two systems rarely fail to corroborate each other. "How about culling according to late or early molt?" I asked. "Oh, that amounts to the same thing," he replied, "only we prefer to cull out those that have stopped laying as soon as they stop, rather than wait for them to molt." Culling is continued till the hens are five years old.

No Electric Lights

As I have already hinted, electric lighting is not followed in the laying houses. They are convinced that while a few more eggs might be the result the first season, this small gain is more than balanced by poor fertility and loss of vigor. "It is all nonsense," declared Mr. Nielson, "to say the hens need more time to eat. Why, even the shortest day in winter they do not eat all the time. A hen can't stand being kept at work from fourteen to sixteen hours a day the year round. I know of more than one man who has [illegible] to [illegible] out of business because [illegible] his hens unduly. They [illegible] to pieces."

All th[illegible]m this ranch are marke[illegible] the Poultry Producers [illegible] owners are enthusiastic b[illegible] for that organization, because it not only secures them better prices, but relieves them of a good deal of responsibility.

POULTRYMAN'S CALENDAR—OCTOBER, STARTING THE PULLETS

While many of the earlier pullets begin laying in July and August and even in June, no regular production can be expected from March and April pullets until October. To get them into laying form as speedily as possible after they have reached maturity without forcing them to the detriment of health is the poultryman's problem. At the Maine station the pullets are put in the laying house in September, but are not closely confined at once. Their mash at first consists of 300 pounds bran and 100 pounds of corn meal, low-grade flour and meat scrap. The first of October this is changed to 200 pounds of bran and 100 pounds each of corn meal, low-grade flour, gluten meal and meat scrap. The first of November 50 pounds of linseed meal is added to the October formula. This gradual narrowing of the ration brings the birds gradually into full laying form, keeps them from moulting in early winter and secures an even production during the winter. At the California station the pullets are put on a maintenance ration of bran and beef scrap (95 per cent bran and 5 per cent beef scrap) as soon as they begin to show signs of early maturity and are kept on this mash until the middle of September or first of October, when they are given the regular laying mash. This keeps them from laying before they are fully developed and prevents fall molting.

For fall layers, whether pullets or hens, there is no better ration than that used at the Vineland International Contest. The scratch feed consists of equal parts by weight of cracked corn, heavy oats and wheat; the mash of equal parts bran, middlings, corn meal, ground oats and meat scrap.

Poultry Queries

Conducted by J. A. Koethen

Crooked Backs

We have Rhode Island Red chickens and several of the young ones have crooked backs, the tails of some being turned clear around to their sides and some of their backs are humped up. Most of them are roosters and were all right when they were chicks. What is the cause of this?—Subscriber, Elsinore.

Lack of sufficient lime and phosphorus in the ration has made the bones of these chickens too soft. Possibly they have also been crowded on the roosts or have slept too long in a box or on a floor where they crowded together and thus bent these soft bones out of shape. If their ration had contained bone meal as well as meat and grain and greens, and oyster or clam shell had been kept before them their bones would have been so strong and hard that a little crowding would not hurt them. Oats, either sprouted or ground, for chicks the rolled breakfast oats, wheat bran and bone meal are the feeds necessary to the making of bone and muscle. If you add these feeds to the ration now you will keep other birds from developing this trouble, but the roosters that are already deformed had better be eaten as soon as possible.

Sudan for Poultry

Please give the value of Sudan grass for poultry. When would be the proper season to sow seed in Santa Cruz County and would it be injurious to the crop to cut when about three inches high and keep it cut frequently for chickens?—Subscriber, Santa Cruz.

I saw a very thrifty crop of Sudan grass growing on a Burbank poultry ranch in August and was told that it is excellent green feed for summer, but that it cannot be grown after the nights become very cold or frosty. My impression is, that from May to October is about the limit of its life anywhere in California. In a warm district it might be sown as early as April. On the ranch where I saw it growing, it was allowed to grow to a height of a foot or more, and then was cut and run through a clover cutter for the chickens. I was told that if thoroughly watered after being cut it would grow again to cutting height in a month.

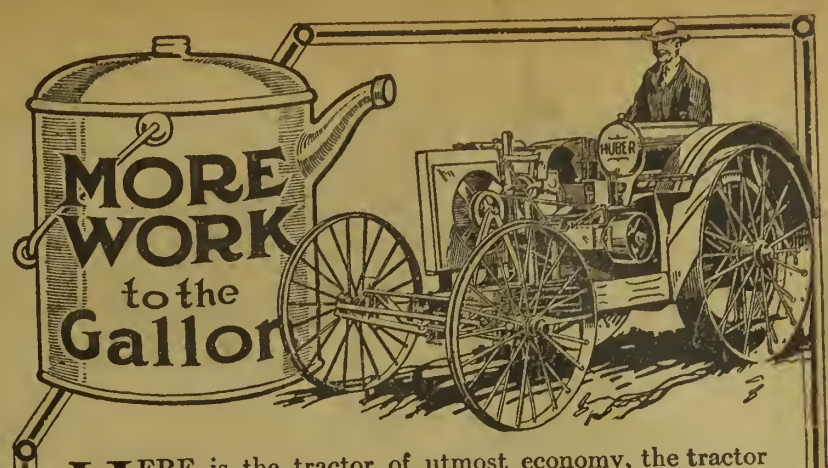
THE MOTHERING FATHER

The "mothering" of things means a whole lot more than their "fathering." A lot of us in this world are ready to father everything that is good, but when it comes to mothering or caring for the helpless a real mother is necessary. However, there are exceptions. One of these is given to Cultivator readers by Miss L. J. Donaldson who writes of an experience:

The old turkey hen had stolen her nest in the hay field and when the mower came she was not quick enough to escape and lost both her legs. She had to go the way of all turkeys, and the eggs were taken home and finished under a setting hen, or nearly so, for when the first little poult appeared she proceeded to kill it so that the rest of the eggs were taken from her and the incubation finished in warm flannels. With the busy housewife the mothering of these poults was not entirely satisfactory. However, they did well for a day or two, then as they were in the sunshine at the doorstep the old turkey gobbler realized the time had come for raising his own family. At night he hovered them and by day he cared for them. The entire flock was given to him and he raised a thoroughly happy and contented family of turkeys that never knew any other mother.

Gentleness is one of the virtues with poultry. It is just as easy to have the birds so tame that they will come up and eat out of your hand as to have them so wild that they will shy off when you come in sight of them

The poultry business is not for the lazy man who has made a failure of everything else. He will make a failure of this also.



HERE is the tractor of utmost economy, the tractor that gets most from every gallon of fuel because the direct drive from motor to both rear axle and belt pulley saves power.

THE HUBER Light Four

is the right sized tractor for every sized farm. It is powerful enough to pull three 14-inch bottoms and turn an acre an hour, and light enough to work on plowed ground without packing it down.

Thousands of Huber Light Fours are in successful use. It is the tried and proved tractor. Huber owners are Huber boosters. For 40 years Huber has built steam tractors; and for 20 years gas tractors. The Huber Light Four is the best tractor Huber ever built.

It plows, harrows, drills, pulls a binder—does every type of heavy field and belt work *economically*. So simple a boy can run it, and anyone who knows an automobile can keep it in repair.

Every one interested in tractors should read the "Tractor in the Making," a reprint in booklet form. Tells vitally interesting facts about tractors. It is free for the asking. *Write for your copy today.*

Weight 5,000 pounds; pulls three 14" bottom plows; 12 h. p. delivered to the drawbar; 25 h. p. at the belt; Waukesha, four-cylinder motor; Perfex Radiator; Hyatt Roller Bearings; burns gasoline, kerosene or distillate; center draft; two speeds, 2½ and 4 miles per hour.

Sperry Rolled Oats are specially kiln-dried

That's all important because it eliminates the fusel oil which gives ordinary rolled oats that strong rancid taste.

Sperry Rolled Oats are so pure and tasty and wholesome that you'll notice the difference at once. It's our special process of kiln-drying that brings out their nut-like flavor.

—that's why they taste better!

And not only do you get full flavor-value in Sperry Rolled Oats—you get full food-value, too! Nor must you suppose that Sperry Rolled Oats can be used *only* as a breakfast dish. Here, for example, are two uncommon ways to use this wholesome and delicious cereal:

Note: All measurements are level. Flour is sifted once before measuring. A half pint measuring cup is used.

Sperry Rolled Oat Cookies

½ cup shortening; 1 cup sugar, granulated or brown; 1 egg; ⅓ cup milk; 1¾ cups Sperry Rolled Oats; ½ cup chopped raisins; ½ cup chopped walnuts; 1½ cups Sperry Drifted Snow Flour; ½ teaspoon salt; ½ teaspoon soda; 1 teaspoon cinnamon; 1 teaspoon nutmeg.

Cream shortening well, add gradually, while beating constantly, sugar. Then add egg, well beaten, milk, Sperry Rolled Oats, raisins and chopped nuts. Mix and sift dry ingredients and add to first mixture. Drop from tip of spoon on well greased pan, about 3 inches apart, and bake in a moderate oven about 15 minutes.

Sperry Rolled Oat Timbales

Pour left-over cooked Rolled Oats into wet custard cups. When cold scoop out centers and fill with well-seasoned chopped cooked meat or fish. Place in a moderate oven until brown. Serve with a tomato sauce.

Ask for Sperry Rolled Oats in the familiar Red Package—at the store where you do your trading.

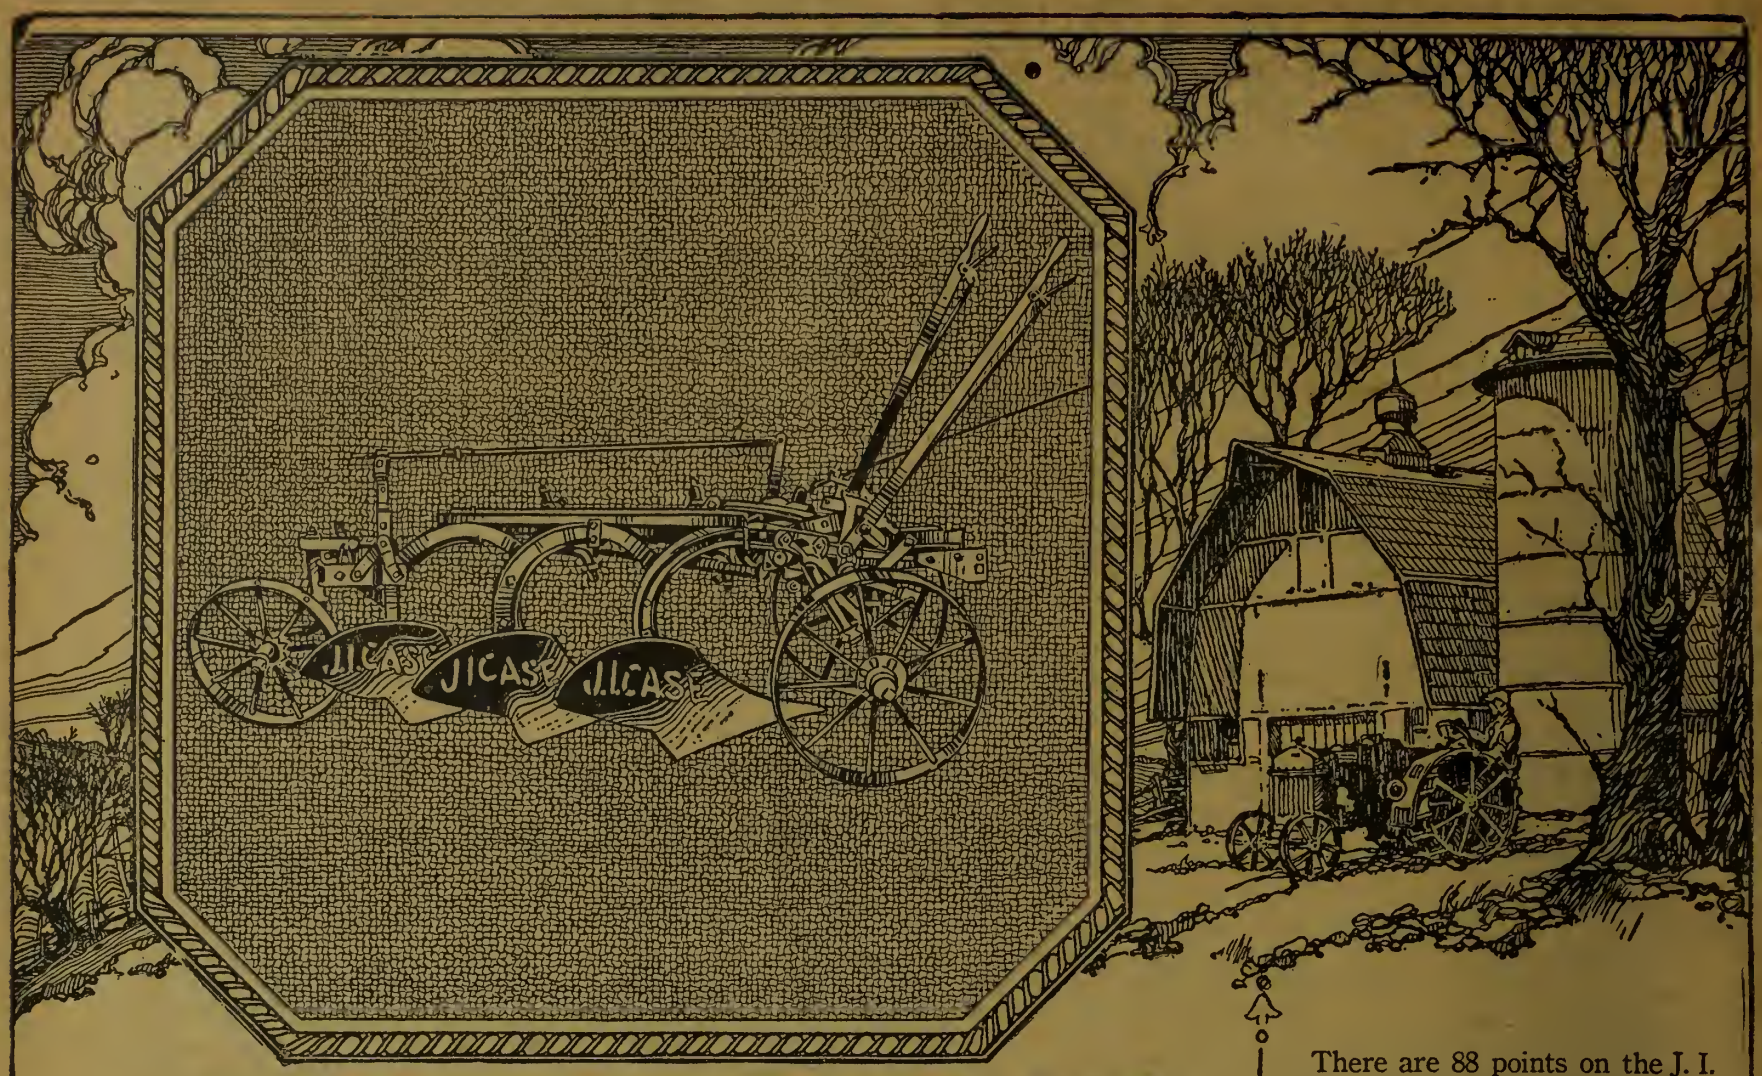
Rich Fields of State Land Settlement in Butte County

Substantial improvements which have been suggested by state engineers and practical farm people prevail in the land settlement colony at Durham. There are no high priced houses; there are no public buildings; some of the farm equipment is not of the highest quality; but so far as improvements have been made they have been practical and permanent. There are concrete gates, substantially built culverts and good roads. Naturally the land is very rich, and fine stands of alfalfa and profitable crops are the results of the first year's work. The farm in immediate foreground was the first one allotted.



J.I.CASE Tractor Plows

Your Tractor Deserves the Best Plow

Your tractor becomes a better investment the moment you hitch on a J. I. Case Tractor Plow. You will plow more acres per day at lower cost, and have a more productive seed-bed.

Its light draft permits of rapid plowing. That is, perfect plowing at better speed. This is due to the uniform depth of furrow, the even pull on all bottoms, the complete, scientific design which gives best possible plowing with minimum "drag."

For over forty years farmers everywhere have relied on J. I. Case Plows. Their experience has shown that with these capable plows they can do not only *more* work but *better* work. The J. I. Case Tractor Plow represents the best of a half-century of successful plow development. It is the logical tractor plow for you to buy.

It is strong and substantially built of first-quality materials. It is lasting and durable. It is light weight and short coupled. It is simple and sure of operation. It is designed specifically for tractor use and has a performance record beyond compare.

The Case Tractor Plow is built as a 3-bottom unit. One share can be dropped for 2-bottom work, or two plows can be coupled to form 4, 5 or 6 bottoms when needed. We also build 10-inch and 12-inch bottoms in various sizes and types designed for heavy or light tractors and for any soil or any requirements.

Consider the outstanding superiorities of the J. I. Case Tractor Plow. Have your dealer demonstrate it or write us.

23

There are 88 points on the J. I. Case Tractor Plow that are examined and inspected before leaving our factories. This is positive assurance that your Case Tractor Plow will measure up to your highest expectations.

Consider the following, which are only a few of the advantages of the J. I. Case Tractor Plow:

1. Light draft, resulting from scientific design and use of highest quality materials.
2. Lifting device operated by strong chains; of simple design.
3. Bottoms always lifted uniform height above soil surface regardless of plowing depth.
4. Extra-width land wheel is stronger and carries the weight better.
5. Re-inforced tension-spoke construction locks entire wheel into one lasting, complete unit. Wheels cannot come loose in hub.
6. Wheel boxes are dust-proof and retain the oil.
7. The "I"-Beam brace on 3-bottom, 14-inch plow gives absolute rigidity and great strength.
8. Gauge-block method of alignment insures correct plowing-position of shares and permits easy removal and replacement of bottoms.
9. Pin-brake hitch is standard J. I. Case equipment. Simple and positive in action. Saves broken shares.
10. Case mold-boards are specifically shaped to best handle every plowing need.
11. Depth levers, once set, need not be changed at end of furrow, or when lifting plow from ground.

Ship by Truck---in California

ATTENTION has been called to California's good roads by events of the past few days. Attention has been called to California's good roads several times before. This time it was by the trip of a number of loaded trucks covering the coast road from San Francisco to Los Angeles, and a number of other trucks—including some of those from San Francisco—which are this week covering roads in the southern part of the state, touching almost every Southern California city. But, strange as it may seem, the truck drivers are not fully satisfied with California's good roads and are saying: "Give us still better."

This is not said in criticism of the present condition of the roads so much as to call attention to the need for encouraging better transportation facilities. The trucks which were loaded in San Francisco and sent to Los Angeles were not specially manufactured or selected, but were taken from regular service or from the shop floor. There was nothing spectacular in the event, and no effort was made to break any speed laws; it was simply an efficiency test under normal conditions.

We regret that we have no comparative figures as to costs, but in general the assertion is made that shipment by trucks will mean great economy for the producer. It will also mean far better and more substantially built highways. The day of the concrete foundation — and of a much heavier concrete foundation than has usually been built—has come. The macadam road has given good service in California, but it will not give the long continued service which the concrete base will, and the fact that our state highway commission has turned almost exclusively to the more substantial foundation gives encouragement to the shipper of farm products and to the shipper of merchandise.

There are some counties in California which have passed ordinances limiting loads which may be transported over highways within their borders. It is possible such limitation is necessary with present day bridges and roadways, but we trust this need is only temporary and that these same counties are already devising means of increasing road efficiency, hence decreasing transportation costs. There should be no limitation of the country's advancement.

Speaking of the practicability of motor truck transportation Manager Hertz of the Moreland Truck Company says:

"Motor transportation is not an innovation. It has become a prime essential to business, and it is a necessity. When the motor truck was first given its taste of what the future held for it there were very few people who realized the advantages offered by it, and most people were content to look upon the motor truck as nothing more or less than an experiment. This contention, however, has been forever eliminated, because the motor truck withstood the rigorous tests it was subjected to and emerged with a perfect score.

"The practicability of the motor truck has been proven in telltale figures until now it is universally recognized as an established transportation medium. The history and success of motor transportation has been builded upon actual operation and execution instead of alluring inducements from governmental sources in the nature of material gifts.

"Competition is the greatest producer of efficiency known. During the past two years or more there has been considerable competition between the railroads specializing on short hauls and the motor truck. The reason for this is largely due to freight congested conditions which were somewhat caused by the hustle and bustle of war work. The immediate success and recognition of motor transportation as being superior to short line railroads is largely due to the war. Now that fighting has ceased 'over there' another momentous battle is being staged at home between the railroads and motor transportation."

FAST FREIGHT OF THE HIGHWAY

By James DeCamp

PERFECTION of the motor truck, coupled with a far flung network of the best highways in the United States, has provided a supplementary railroad which lays its own tracks to the gate of every Western farmer. This line is independent of sidetracks, schedules and semaphores. It has for right of way the wide west itself, from the Sierra Nevada to the Pacific, from the Canadian boundary to the cactus studded realm of revolutions and tamales.

Coming at a time when the steam lines are glutted with the greatest mass of freight business in history and their arteries swollen to bursting with unprecedented passenger travel, this rubber shod transportation system is hailed as nothing less than an intervention of providence. Throughout the troublous war years the motor truck proved itself a factor in national life by assisting the railroads in handling Uncle Sam's affairs. Now it is stepping forward to relieve the freight car shortage, to assume the bothersome short and medium hauls and thus enable the railroad administration to handle the wheat, barley, rice and other important crops.

When the train of 15 laden trucks, comprising the San Francisco "Ship by Truck" caravan, thundered into Los Angeles on Saturday, October 4, the miracle book of progress opened to a new chapter. With a combined cargo of some 86,000 pounds, including print paper, farm machinery, lubricating oils, automobile and truck tires, walnut bags, tractors, flour, goods made from California cotton by a California mill, and other articles the San Francisco expedition proved beyond argument that gasoline propelled vehicles are qualified to handle shipments of all varieties both expeditiously and economically.

With a brief stop for delivery and reloading the bay city caravan headed northward for the return trip over the coast route, the entire distance laid out for the trip comprising 1,000 miles. At the same time, not to be outdone by their up-state contemporaries, Los Angeles truck dealers launched a one week's demonstration and educational tour covering Southern California completely. This mammoth run, due for completion on October 11, called out some 35 entries, ranging from light delivery models to heavy commissary, refrigerator, oil tank and fire trucks. The itinerary included Long Beach, Downey, Norwalk, Artesia, Garden Grove, Santa Ana, Anaheim, Fullerton, Brea, La Habra, Whittier, Puente, Pomona, Ontario, Riverside, Colton, Redlands, San Bernardino, Upland, Claremont, LaVerne, San Dimas, Glendora, Azusa, Monrovia and Pasadena, freight being carried from point to point. Educational demonstrations, lectures and motion pictures were furnished for the crowds along the route while many of the towns arranged receptions, dances and barbecues in honor of the train.

For the agriculturist who is sending his product to market or ordering supplies of machinery the truck method of shipment is cheap, convenient and positive. Tedious trips to and from railroad loading points and delays due to rehandling, sidetracking, etc., are absolutely eliminated. The truck transport backs up to the barn door for your shipment. Once loaded the stuff is on its way, arriving at the curb or warehouse of the consignee, in most cases, before it is handled again. Similarly, implements, seed, etc., ordered for farm or orchard are delivered to the dooryard—not to a freight warehouse miles distant from their destination.

Truck tonnage includes so wide a range of capacities that shipments of every conceivable bulk and weight may be handled. Between the light delivery trucks, designed to carry about 1,000 pounds, and the 7½ ton monsters there is a flock of graduated sizes, all of which will be available under the plan of organized motor freight service. When a complete truckload of certain products is to be carried the cost of crating or sacking may often be eliminated, since the goods will not be subjected to the ordeal of frequent bumping about on freight platforms. For extremely perishable stuff refrigerator trucks are being put in operation on the longer runs, while in some districts large machines equipped with dumping apparatus have been used successfully for handling sugar beets.

In some parts of the state, where the short haul trucking business is highly organized, farmers have seen fit to turn over part of their land to truck gardening, and this with profitable results because of the excellent transport service furnished. The extension of motor hauling has also put many in touch with the market who heretofore have been partially isolated through lack of funds to purchase a truck. In this field the freighting by motor idea has created its own business and enlarged the profits of the farmers without competing with any other carrying medium.

In Southern California some 83 truck transportation companies are listed with the "Ship by Truck" bureau as operating regularly over 34 fixed routes. This comprehensive system has relieved the railroads of many unprofitable "short haul" jobs and encouraged farmers, produce men and dairymen to increase their output materially in this district. Some of the larger farm establishments are now reaching the city regularly with dairy products which heretofore have been practically worthless.

As the ship by motor movement gathers momentum a general readjustment of foodstuff prices is inevitable. Land unprofitable because of remoteness from railroad and market will be cultivated by men anxious to play the game to the limit as soon as they receive the assurance of transportation for their products. Others who have been growing staples will enlarge their acreage and tackle more perishable stuff, or install dairy herds. Communities will join in the purchase of trucks to carry the crops of the district to the large distributing centers and return loaded with groceries, clothing and supplies. The possibilities contingent upon the development of the scheme are unlimited.

But there are difficulties to overcome which will require the closest cooperation between merchants, farmers and the truck dealers and operators. The people must be educated to a full realization of the benefits obtainable. Bonds must be voted and pressure brought to bear for the augmenting of our good roads system and construction of certain connecting links. Above all the shipper must realize that the secret of the entire project lies in keeping the trucks loaded both ways and endeavoring to so regulate shipments that this may be realized.

The personnel and cargoes of the San Francisco caravan were as follows: Two ton White, The White Co., load of Firestone tires. One and a half ton Maxwell, Western Motor Co., print paper. Three and a half ton Kissel, Western Motor Co., print paper. Two and a half ton Service, Peacock Motor Sales Co., cotton goods. Four ton Fageol, Butler-Veitch Co., Fageol tractors. Two ton Federal, William L. Hughson Co., farm machinery. Three and a half ton Federal, William L. Hughson Co., Fordson tractors and oil. Two ton Garford, Garford Motor Truck Co., oil. One and a half ton Garford, Garford Motor Truck Co., paper. One ton International, International Harvester Co., farm implements. Three and a half ton Mack, International Mack Co., grain. Seven and a half ton Mack, International Mack Co., walnut bags. Two ton Nash, Pacific National Motor Co., flour. Three ton Packard, Earl C. Anthony Co., Goodyear tires. Three ton Packard, Earl C. Anthony Co., commissary truck.

The following Southern California companies entered from one to four trucks apiece in the Southern California tour, freight to be picked up and distributed along the route: Moreland, Moreland Motor Truck Co.; White, O. R. Fuller; Republic, Harold L. Arnold; Pierce-Arrow, W. E. Bush; Federal, William L. Hughson Co.; Kissel, Western Motor Sales Co.; Oldsmobile, J. W. Leavitt; Garford, Garford Motor Truck Co.; Mack, International Mack Corporation; Fageol, Ruddle and Menillo; Chevrolet, Chevrolet Motor Co., of California; Diamond T., Walter H. Bissell Co.; Kimball, Kimball Motor Truck Co.; Autocar, Autocar Sales Co.; Jumbo, Smith, All-American and Vim, Gates-Kelly Co.; Firestone, Firestone Tire and Rubber Co.; entries from the Goodyear Tire Co., B. F. Goodrich Rubber Co. and Union Oil Co.

Agricultural News Notes of the Pacific Coast

Northern California

A newly patented grape dehydrator is at work near Rutherford.

The first rice crop sold in Shasta County brought $6.05 a hundred.

The El Dorado County fair will be held at Placerville October 23-25.

California Industries and Land Show, San Francisco, October 14-19.

Construction is to begin on a $200,000 food products plant in Sacramento.

A carload of Placerville Kelsey plums brought $6.60 a crate in the East.

A new nursery firm at Marysville will grow more than 3,000,000 fruit trees.

Buyers in "wet" countries have contracted for 50 per cent of California's hop crop.

The fig acreage of the Sacramento Valley will be doubled by this season's plantings.

The teachers' institute for Northern California will meet at Sacramento October 21.

A 40 acre peach orchard in Sutter County recently sold for $35,000, a record price.

Dr. H. S. Fawcett, citrus expert, is making a citrus blast survey in Tehama County.

There is a 20 acre field of Turkish tobacco in Placer County that yields heavy returns.

A seed farm for peas is the latest enterprise in the Hallwood district of Yuba County.

The new $100,000 dairy products plant at Holt, San Joaquin County, is now in operation.

Citrus growers within a radius of 100 miles of Oroville attended a meeting there last week.

Japanese importers have placed an order for 1,000,000 pounds of Sacramento Valley rice.

Sacramento bean prices are $5.75 per hundred for pinks and $6.90 for whites, in the field.

The state board of control places the profits of the state fair between $9000 and $10,000.

The Vacaville and Suisun districts have shipped 35 cars of fruit a day for the past month.

From two to five carloads of wine grapes are daily shipped to Chicago and eastern points.

Prairie and brush fires about Grass Valley have destroyed grazing for thousands of cattle.

Owing to a strike on the Sacramento river boats, all perishable products are shipped by rail.

Shasta County will have two stock exhibits, at McArthur October 4, and Anderson October 25.

Twenty years ago wine grapes in Sonoma County brought $14-$17 a ton and cost $1.25 to pick.

Herbert Hoover has been asked to speak at the Fruit Growers' convention, Chico, November 10-15.

Owners of several thousand acres in the Cordua district, near Marysville, have formed an irrigation district.

The Alhambra Valley, near Martinez, has shipped $25,000 of Tokay grapes, also $100,000 worth of pears.

The Elson ranch of 640 acres, four miles from Modesto, sold last week for $180,000.

Central California

Visalia Victory Fair October 13-19.

Tulare reports .87 inches of rain to October 1.

Tulare County Live Stock Show October 6-11.

A citrus packing house is being built at Imperial.

Kings County will have a hog show at Hanford October 15.

Madera County has an irrigation scheme to embrace 370,000 acres.

Pomona reports all local canneries have changed from peaches to tomatoes.

In the period of September 1-24 the Lodi section shipped 1,706 cars of grapes.

Several hundred acres to rent are wanted in Yuba County for seed production.

Up to October 1 Turlock received 1.04 inches of rain, causing severe crop damage.

A Lindsay grower brags of a bean 40 inches long, but that "New Guinea bean" is a gourd.

Kern County land owners are organizing an irrigation district to embrace 400,000 acres.

Turlock growers and cannery employes received $650,000 from the local plant the past season.

Lodi growers claim car shortage will result in but 50 per cent of their Tokays being marketed.

Up to September 27 Watsonville shipped 745 cars of apples, as against 367 same date last year.

At the last farm bureau hog sale at Corcoran, Tulare County, the prices ranged from $12.95 to $15.15.

In two months at the Tulare cannery 1,139,251 cans of peaches were produced, the payroll being $43,574.72.

A load of almonds weighing eight and one-half tons was delivered at Oakdale, Stanislaus County; value $5,000.

About $112.000 was realized by Stanislaus County farmers from sales at Turlock and Modesto on September 26.

The railroad strike in England is preventing shipments of apples from Watsonville. All shipped are held in New York and none now going forward.

The Tulare board of trade has called a conference of water interests at Tulare October 24. It is hoped at this meeting to present a program for a valley wide reclamation project.

Grape growers of Fresno and Tulare Counties are held back from shipping because of car shortage. Word comes from Dinuba that not more than 25 per cent of the Malaga crop has been marketed in those counties.

Night classes for fruit growers are being conducted by Dr. Boncquet in Porterville, Exeter and Lindsay. Instruction will cover a period of 20 weeks. Dr. Boncquet is in charge of plant pathology investigations of the Fresno County horticultural commission.

Farm center meeting dates for Merced County are as follows: Planada, 10; Riverside, 14; Fruitland, 15; Le Grand, 16; Amsterdam, 17; Plenic, 18; Livingston, 20; Stevenson, 21; El Nido, 22; Eschscholtzia, 24; Merced Colony, 27.

Southern California

Lima beans opened at Oxnard at $12.05.

Los Angeles Live Stock Show October 18-26.

Shippers of Valencias complain of car shortage.

The Imperial honey crop will be about 20 carloads.

One carload a week of melilotus seed is shipped from Brawley.

A child of five died in Los Angeles from eating green walnuts.

The acreage of lettuce to be planted in Imperial Valley is fully 10,000.

M. H. Mendleson of Ventura County has nearly 2,000 colonies of bees.

The Oxnard district reports very little damage to Lima beans from rain.

The parlatoria scale on date palms in the Coachella has been exterminated.

The Elsinore cannery is running full blast with tomatoes but is short of labor.

C. E. Borst, Hemet, picked 202 boxes of peaches in 11 hours and received $16.16.

The 15 acre Blom ranch of Valencias at Garden Grove sold last week for $52,000.

The packing plant of the Santa Ana Walnut Association opened on September 29.

Buena Park and vicinity in Orange County is to have an immense drainage district.

Owing to rains the California Lima Bean Growers have not named the 1919 prices.

The new packing house of the Whittier Walnut Association is now ready for business.

Riverside County is destroying Russian thistle around West Riverside and Wineville.

The Elsinore tomato cannery started work September 15 and hopes to run until Christmas.

The La Sierra Canning Company has moved its offices from Los Angeles to Arlington.

The weather man says the October rainfall in Los Angeles was the heaviest in 43 years.

There is an organized movement at Brawley both in city and county to get rid of the Japanese.

Men and boys of Pomona who fought forest fires were paid over $20,000 by the federal government.

The bean warehouse at Greenville, Orange County, has up to date received 15,000 sacks of Limas.

Twenty-five thousand acres in the San Fernando Valley are estimated to yield 25,000,000 pounds of baby Limas.

Officials of the Walnut Growers' Association met in Los Angeles October 1, fixing the price of budded walnuts at 34 cents.

James J. Jeffries, retired heavyweight, will send a pedigreed calf by airplane from Burbank to the Los Angeles Live Stock Show.

Two Goleta, Santa Barbara County, ranchers were fined $25 each for hauling bean straw without a permit, in violation of a county ordinance.

The stockholders of the California Date Association met at Coachella September 13 and appointed a committee of five to decide upon grades of dates and prices to be paid growers.

The Coast and General

A potato show will be held at Redman, Oregon, October 16-18.

Three counties in Oregon are making a fight against jackrabbits.

An Oroville cannery is putting up grapes, mainly Thompson Seedless.

Catania, Italy, estimates 250,000 boxes of lemons will be exported this year.

Yuma Valley has a serious labor shortage and a big cotton crop to pick.

A turpentine plant is being built at Portland to utilize the fir pitch now wasted.

Hood River, Oregon, farmers resolved not to sell or lease land to Japanese.

Ricardo Videla, of Buenos Aires, Argentina, is studying California farming methods.

Tacoma, Washington, farmers have rented a market and will bar Japanese from its use.

Reports from 60 fall wheat farms in Stevens County, Washington, show a yield of 30 bushels.

Twenty-five cars of lambs in one train, numbering 5,350, left Republic, Washington, recently.

J H. Dengel of Chicago purchased a five acre apple orchard in the Wenatchee Valley for $15,000.

A load of 3500 pounds of dried raspberries at Springbrook, Oregon, brought the owner $2,302.

The first two bales of Egyptian cotton sold this year in Mesa, Arizona, brought 65 cents a pound.

Large numbers of cattle in Oregon have been killed by eating poison hemlock, Conium maculatum.

The California Walnut Growers will issue a cook book to show the housewives how to use walnuts.

One Hood River nurseryman has received an order for 200,000 Clark Seedling strawberry plants.

Palermo, Italy, exports this year about 1,250,000 boxes of lemons. Already 650,000 boxes have reached New York.

A line of poisoned bait three miles long was recently laid by Springville, Arizona, farmers to stop an invasion of grasshoppers.

Bulletin No. 88 of the Arizona agricultural experiment station is entitled "Use and Waste of Irrigation Water". This bulletin was compiled by Prof. G. E. P. Smith.

The entire Shorthorn herd of the Bartlett-Heard Land & Cattle Company of Phoenix, Arizona, consisting of 146 head, has been purchased by C. W. Bowers, of Merritt Bowers Company, Tulare, California.

The number of motor vehicles registered in Arizona up to September 15 was 29,643. The secretary of state estimates that there will be about 1250 more during the year. The total number last year was 23,905.

The city of Phoenix is to celebrate fire prevention day, October 9, as clean-up day. This is partly in the interests of making the city more attractive and more particularly to improve sanitary conditions, believing that every precaution should be taken to prevent a recurrence of the influenza epidemic.

Common Sense Plan for Land Settlement

Editorial Correspondence

AS ONE looks at the great wealth of the state of California it appears that with all the rich lands which are insufficiently farmed and the thousands of acres which are not farmed at all, the state should be able to give each one of us who might ask a farm all his own.

Something over a year ago when the first land settlement act became a law it seemed to a number that the wonderful time was coming when the state would present us with the long wished for little farm. But there was a shock for all who had such dreams. The state did proceed to buy some land—not much—in fact only two tracts totalling 5219 acres in Butte County near the little station of Durham.

A small portion of the land was subject to a lease so all could not be subdivided into small farms, but such as was free was divided and in two separate allotments was assigned to ap proximately 100 farmers. This assigning, however, was not without considerable delay and thorough investigation. The state had a natural desire to make a complete success of this first venture, the first venture in America, for that matter. Hence it asked some long questions of those who would farm on lands which the state might assign to them. The question may be raised as to how these people were secured; how they were all given an opportunity to purchase from the state of California these lands. Careful readers of the columns of the California Cultivator of about a year ago may possibly have noticed among the very interesting items which appear on the liner pages this advertisement:

STATE FARMS FOR SETTLERS—Thirty-one farms and five farm laborer's allotments in the state land settlement at Durham are now open to the inspection of intending settlers. Applications will be received up to noon. November 20, 1918. For particulars regarding prices, terms of payment, address George C. Kreutzer, Superintendent, Durham, California.

It was in response to this and similar advertisements that the people of California gathered at Durham for the drawings.

Those who applied were almost all practical, hard-headed people; they were not dreamers who thought the state had farms to give away, but understood they were to make a direct purchase. Yet the state wished to know their qualifications, and where two or, as was sometimes the case, a dozen or more applied for the same parcel of land, it asked: What is your experience; what is your capital; what is your ability to endure hard work; and a number of other practical questions. The answers to these questions, together with somewhat of a knowledge of human nature, led to the selection of 100 farmers, and now, after something more than a year since the first farmers began making homes, I have taken a ride over a portion of the settlement, I have talked with some of those who have put in a year of hard work, and I cannot help but say: "California's first land settlement has proven an unqualified success."

Every settler is not as successful as he would wish, in fact, it is admitted that one or two errors were made, and transfer or reassignment of holdings have been made to other settlers. Paternalism enters not at all into the plan. The state bought unimproved land; specialists employed by the state investigated soil and water conditions; other specialists divided or parceled the farms into holdings varying from an acre or two to 300 acres or more. Practical farm management people, aided by soil chemists and irrigation experts and engineers, tendered their services to the settlers. and while every farmer was free to act as he preferred (within certain lines) with his own property, yet with practical helpers at hand few mistakes were made.

Pioneering in Butte County

Upper picture shows Chris. Neilsen in his working clothes. Picture on the cover gives a better view of the field in the background. The man showing the biggest smile is G. C. Kreutzer, superintendent and all around daddy for the whole bunch. The other gentleman is William Bunger, a returned soldier, just getting down to work on his allotment. The third from the top is a scene in the 22 acre or park site near the center of the settlement. The lower is a cottage of one of the settlers.

Some of the lands which were not apportioned until after crop planting time had been seeded under direction of the settlement board, and these growing crops were transferred to the settler with charge sufficient to cover cost of labor, seeding and care up to time of his purchase. The harvesting of these crops netted to the settlers sufficient to aid materially in the first year's keep of the family. Alfalfa and even more permanent crops were sometimes planted; orcharding, however, was left entirely to the settler. The board preferred that each farm should be a general farm, so diversified that the settler would have each month a cream check or egg account or other return which would mean encouragement for each month.

My visit was all too short. Owing to a late train there was little more than an hour to be spent in the settlement. Through the courtesy of the superintendent, George C. Kreutzer, I was given opportunity for a once over and had only a few moments for conversation with settlers. Of course I saw Chris. Neilsen, the first settler to begin operations on his own farm. Mr. Neilsen had a little capital; he had more ability for hard work and was engaged in it at the time of my visit. Photo on this page shows him in the act of sinking post holes along the roadside in front of his alfalfa field. There was a magnificent stand and it showed that regular irrigation had kept it in excellent condition until the early fall season.

The houses vary in comfort and in beauty, for there is a range in cost of from $400 or $500 to as high as $3,000. Some of the settlers are still living in their barns, having built a substantial structure for storage of hay and devoted one corner of it for home use until another crop shall bring other comforts. All but three of the 100 settlers are married, and with schools and other advantages the social life will soon be the equal of any in the state. One of the social gathering places is a grove of valley oaks containing over 22 acres in the center of which is a large dancing floor with water and lights and other conveniences. It is hoped that another season will see the installation of a plunge. This grove was made the gathering place for the annual picnic of the Butte County farm bureau, and its advantages to the settlers as a social center were abundantly shown on that day.

One of the greatest advantages in a settlement of this type is the oneness of interest which permits and even induces unity in solving marketing and other problems such as stock breeding. In live stock the community idea is being worked out. For instance, in the selection of dairy stock it has been

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

THIS WEEK'S COVER

An auto load of people passing a thrifty alfalfa field will invariably bring forth the remark: "The most beautiful of sights is growing alfalfa." The cover illustration is one of those beautiful sights, with new mown hay in the foreground, standing alfalfa in the middle distance, and the life giving water at the borders of the field. The scene is laid in Butte County. More particularly, it is on one of the state land settlement farms near Durham.

OCTOBER 26

Sunday, October 26, 2 A. M., is the time for changing the clocks back to good old suntime, and as congress succeeded in overriding the president's veto and repealed the daylight saving law, it is to be presumed our clocks will remain with the sun for some years to come.

COOPERATIVE TRUCKS

It costs a lot of money to buy a dependable motor truck. The small farmer can hardly afford such a luxury; perhaps we should say necessity, for the time is rapidly coming when its necessity will be more apparent. Hence the suggestion. Communities have organized and bought high-priced registered bulls and stallions. Why not the cooperative motor truck?

LITTLE DAMAGE

We feared last week that much damage to Lima beans might result from the rains. The moisture has all passed and the sunshine has started the cylinders in the threshers, and the last of the beans will soon be in the sacks, in fact, the more hopeful think that a fraction of one per cent will represent the real damage to the bean crop. As to prices—well ask congress.

BETTER TRANSPORTATION

Papers of San Joaquin County refer repeatedly to the awful losses occasioned to grape growers by lack of transportation facilities. The Lodi Sentinel carried big headlines: "Hopes of a golden year have gone glimmering. Transportation a factor that contributes to transform bright anticipation to gloom." The paper says: "From the standpoint of ability to move the crop, the grape situation in California is the most disastrous that has ever confronted the growers and shippers of this state."

There appears to be excellent market in the East for the grapes if they can be shipped. The Tokay situation in Lodi is characterized as rotten. The supply of cars is woefully inadequate, and, in addition, instead of seven and ten days service to Chicago and New York, as last year, the quickest shipment this year is around 15 days, and instead of making a 30 day round-trip service for each car, it now requires 50 days to two months. Lodi alone is able to send out 170 cars of Tokays daily. But the greatest number of cars she is receiving is from 20 to 32.

READY FOR THE CENSUS

The census bureau has printed 15,000,000 copies of the farm schedule to be used for gathering data for the 14th decennial census. These will be distributed so far as possible before the enumerator's visit, in order that farmers may become familiar with "acreage, tenure, values, live stock and crops." The bureau anticipates that the coming census will show an increase of 1,000,000 farms since 1910. At that time the farms enumerated numbered 6,361,502, valued at $40,000,000,000. Enumeration will begin on January 2, 1920. The work of gathering data is expected to be completed by February 1.

Above all the enumerators are appealing to farmers for full and complete returns. To that end they give assurance that the facts and figures gathered will have absolutely nothing to do with valuation of property for taxation purposes. The act of congress which provides for the taking of the census makes it unlawful for any enumerator, special agent, supervisor or other employe of the census bureau to divulge any information whatsoever concerning the census returns.

ASIA OR AMERICA?

A committee of bean growers is in Washington fighting for recognition of the California bean, or, more correctly, the American bean. Last year America's production was nearly double that of any preceding year, but with this immense production of highest quality beans the market went to pieces because importers poured in over 3,000,000 bushels of Asiatic grown stock. This, on top of the 10,000,000 bushel production of 1918, with another 6,000,000 bushels of holdover, was sufficient to cause a stampede and destroy every semblance of stable marketing conditions. The spring of 1919 saw greatly lessened planting, and unfavorable weather conditions caused still greater reduction in harvest. What will be done another year by bean planters remains for congress to say. If the people of the United States prefer Japanese and Chinese produced beans, there are now the ships to carry them to this country. Meantime some American producers will lease their farms and move to town.

WINE OR NO WINE?

The grape grower is finding "the government" a desperately indefinite term. "Will the government permit crushing of grapes and manufacture of wine?" is a question which is repeatedly asked and as repeatedly unanswered.

The internal revenue department says it has instructions to collect revenue on all wine manufactured but gives assurance that this in no way exempts from war time prohibition or gives faintest promise that the law will not be enforced to the fullest. The department of justice, or those having to do with the enforcement of the law, grins and says nothing. Presumably the safest course comes from observing the spirit and letter of the law. However, in two separate dispatches now appearing in daily papers it is announced: "U. S. will not interfere with wine makers."

A word of warning may be given as to homemade wines. The impression prevails that everyone is entitled to make for home supply. Notice has been served that the making of a gallon is as much a violation of the law as is the making of a carload.

PLANT A SEED

Now comes a farmers' bulletin from the department at Washington, "Home Storage of Vegetables." It is a bulletin which will be little understood by California growers. The Californian is planting his winter garden now and prefers the fresh garden sass to any stored stuff. We would suggest to our Eastern friends that instead of hibernating along with their stored vegetables they come to California and plant some seed.

HOME CANNING

The French people were quick to pick up instructions given by Americans and the thrifty people proceeded to can everything from garden and orchard which was not sold fresh. This is proving so successful that French missionaries are carrying information as to the advantages of home canning into Northern Africa. This is one case where French thrift and economy took lessons from the American waster.

FARM OWNERSHIP

The Oklahoma Farmers' Union has adopted a resolution asking congress, if it grants the demands of the railroad men, to buy all the farms of the United States, employ the farmers to operate them at two-thirds of the hourly wage paid to the railroad employes and sell the products of the farms to consumers at cost.

This would be just as fair as it would be for the government to buy the railways and would save the farmer a lot of worry. Uncle Sam is a fatherly old fellow and while he is distributing his favors should remember the farmer.

BARRING A GOOD GRASS

The Imperial Valley says that no seed of Sudan grass shall enter that rich section. And yet Sudan has proved itself capable of increasing the wealth of any section. Unfortunately its seed is identical in appearance with that of the deadly Johnson grass, and who wants Johnson grass? The Imperial Valley says, "Not I," and proceeds to bar the good in order that the evil may be prevented or, rather, reduced, for there is already in that valley much of Johnson grass infestation.

TEST THE COWS

It is inherent in nearly all of us to dread to learn wherein we are failures, and while we fully realize the necessity of locating the cause of loss it comes easy to put off the final determination. Hence many a farmer has continued to board and maintain in comparative idleness an old brindle cow even at the expense of some comfort to his own family. Worse, many a farmer will continue for some time to come to do the same identical thing. Occasionally a dairyman does awaken to the fact that this is the height of foolishness. He joins the cow testing association; he learns to appreciate the work done by cows of real merit; and he learns that comforts may be restored to his family by making beef of the boarders. This man becomes an educator for his neighbors, but it seems to be a desperately slow process.

May the cow testing associations increase.

KNOCKS

Sometimes when the motor begins to knock the owner proceeds to imitate it, but the manufacturer of the auto or truck or tractor maintains that the motor is sometimes really justified in its knocking and that the owner is not. One tractor manufacturer says: "The tractor motor that goes out and pulls its load for ten hours has put forth as much energy as the automobile that has covered a distance of 600 or 700 miles." That is some distance, and instead of knocking the owner should give more attention to care of a faithful servant. All of us who have followed the team and plow through a hot forenoon have found that we might secure renewed and far better service in the afternoon if the collars were removed and a shoulder bath with cold water given the faithful horses. The faithful motor cannot voice its appreciation as plainly as does the faithful horse, but its service speaks for itself.

NOT PROFITEERS

The retailers and middlemen found it necessary to turn the spotlight in some other direction, so they picked on the raisin and prune growers and other cooperative organizations as guilty parties, and the stop-thief cry resulted in rather an uncomfortable time for some of the cooperators. A trip to Washington has been made necessary, but it has resulted in making a conclusive showing that the producer is simply eliminating a few of the large profits exacted by the established trade. In fact, we think that prices to consumers have been lowered by efforts of cooperating producers.

Just at the present moment both consumer and producer are pointing to labor as the cause of some of the high prices. Local papers in various fruit producing sections have chronicled the fact that swift working fruit cutters and operators have been earning during the busy season of the past summer as high as $50 and $75 per week. The producer is the first sufferer in the payment of such wages but naturally it comes to the ultimate consumer.

The Great Family of Citrous Trees

By Ernest Braunton

DOUBTLESS there are a few growing citrous fruits who care nothing about the great family to which these trees belong, but as a rule men are interested in all that is closely allied to matters or objects under their care or charge. In this article I shall aim to present short notes regarding the nature, nativity and possible use of members of the citrous tribe outside the genus Citrus which contains only the citron, lemon, lime, grapefruit or pomelo, sour or Seville orange, common or sweet orange, King orange, and the Calomondin orange from the Philippines.

While this article is not aimed to be scientific, it is our purpose to avoid the known hybrids such as the citrange and limequat, for much has been written of these and the tangelo. Two other genera are well known to growers in Fortunella, which is the kumquat, and poncirus, which the tradesman has called Citrus trifoliata, because it belonged to the citrous tribe, though not more so than those of which we write. It will be necessary to use the botanical names, for very few have any other but if such others are known they will be given. Some of these little known citrus trees will some day prove of great interest also of great value to Californians, more especially the climbers. Many of them are recommended for trial by the United States department of agriculture.

Aegle Marmelos is a small and handsome tree native to northern India but widely cultivated throughout other nearby countries. It has a fruit ranging from 2-6 inches in diameter, but usually 4-5 inches, covered with a thick shell filled with a pale orange-colored pulp that is sweet, wholesome, nutritious and very palatable and also has some medicinal value in both ripe and green state. The tree is now being tested in the warmest parts of this country, according to Walter T. Swingle.

Aeglopsis Chevalieri is a small spiny tree from tropical West Africa and bears a fruit with a thin hard shell of orange color, but inside it is filled with a mucilaginous mass that is highly aromatic. It is reported growing in swamps near the sea and it may be strongly resistant to alkali. The U. S. department of agriculture is testing it in the greenhouses at Washington as a stock for other citrus fruits.

There are a dozen or more species of Atalantia ranging from India to Australia and several of them have been recommended for cross-breeding with our better known citrous fruits The fruits look like small oranges, with a lemon skin, which in some species is edible, but in others the trees are being tried merely for stock to work citrus on, while fruits of others yield oil. Some of these trees range to forty feet in height.

On account of the vigor and size of some species of Balsamocitrus it is thought they may prove of value on which to work other trees. They are native to Tropical Africa and bear orange-like fruits six inches in diameter filled with an amber-colored fragrant gum. The empty fruits of one species have been much used for powder flasks.

The tabog is the common name of Chaetospermum glutinosa, native of Luzon in the Philinpines. Oranges, lemons and all such trees have been successfully budded on the tabog, which shows a most vigorous root growth though the tree is a small one.

Citropsis is known as the African cherry orange. This is an interesting tree which bears small bright colored oranges averaging ahout one inch in diameter, with an agreeable odor and a pleasant flavor, borne on the trees in tufts or bunches, hence its common name. The trees have been cross-budded at Washington with the more common sorts.

In its native Australia Eremocitrus is called the desert qumquat, and has been grown by the writer as an ornamental. It stands both heat and cold to a remarkabe degree and buds well with the common kinds. It is the hardiest evergreen citrous tree known. The fruits are used for jam and pickles and for making cooling drinks.

Feronia Limonia is known as the wood-apple, a deciduous tree from India that is being tested in California as a stock, all common kinds being budded on it. The fruit has a hard, woody shell with an acid edible pulp which is used for making a jelly somewhat similar to black currant jelly. It also has some medicinal virtues.

Feroniella is closely allied to Feronia and may also be used as a citrus stock. It is native to Cochin-China and surrounding districts where its fruits are used as a condiment in sauces and the pulp is sometimes eaten. Trees are now growing in the greenhouses at Washington

If we have a navel orange may we not also have a naibel? For that is the name of a small spiny tree of beautiful foliage native to Ceylon, India and Cochin-China. The fruits are very small, not more than a half inch in diameter and bitter, but used for seasoning. The tree has a vigorous root system and is recommended for trial for budding stock by Swingle, who has some budded on both lemon and grapefruit at Washington. The botanical name is Hesperothusa.

Lavanga is the botanical name of a citrous tree whose common name is lavangalata, which is a poser for those who object to botanical names. There are several species of Lavanga and they are all climbing shrubs and U. S. experts say they should be introduced into this country for budding and breeding trial. Hurrah for the climbing orange! These trees range through India, Cochin-China, and the Malayan Archipelago and bear small lemon-colored resinous fruits the size of pigeons' eggs.

The finger-lime of Australia has fruits of finger shape with a pungent acid juice and the tree is recommended only for budding and breeding purposes on account of its extreme hardiness. The tree grows forty feet and has a variety bearing blood-red fruit with pinkish pulp. There are five species of this tree, Microcitrus by name, and one bears a lime equal in flavor to the best, but the fruits are not finger shaped.

In India and Ceylon, in sandy soil near the coast is a small citrous tree named Pamburus missionis that bears small fruits filled with gum. It is thought it may prove good stock for light sandy soil.

Papeda Histryx is used in the Philippines on which to graft the more common stock, but its fruits are not edible, but sour and acrid, though closely allied to the genus Citrus. The Filipinos use the fruits instead of soap for washing the hair.

Paramigyna are evergreen climbers related to the orange having round lemon-colored fruits filled with gum, and twigs, leaves and spines somewhat hairy, the latter character usually ascribed to plants withstanding severe drouth.

Pleiospermium is but Greek for many-seeded! And there are two species of it native to India and elsewhere and though related to the orange the fruits are filled with that mucilaginous pulp so common in the citrous family. It is thought both species are worthy of trial as budding stock.

Severinia buxifolia is a box-leaved plant not far from the orange but having black berries with no pulp as the orange, but fleshy and evidently a true berry. It is used as a hedge plant and doubtless has a value for budding stock for lands too salty for other citrous roots to grow.

Triphasia trifolia is the lime-berry widely cultivated as an ornamental for the shrub is very attractive even when not in bloom and it flowers and fruits freely. It is of interest to the orchardist by reason of its growing in soil much too salty for any orange and therefore worthy of trial as budding stock.

From pears to peaches in California is indeed a far cry for the 1919 estimate of pears is but 93 000 bushels, while that of peaches is placed at 17,488.000 bushels. Our apple yield is considerably less than half of the peach crop, being 7 591.000 bushels. All land crops of California are estimated to reach 95 to 100 per cent of normal.

Relation of Soil Moisture to Orchard Irrigation

(Continued from last week.)

Gravity draws the melted snows from the high Sierras and deposits the water in the ocean, and it is this same force which draws the irrigation water downward through soils and subsoils. During the past two years McLaughiin of our bureau has demonstrated that gravity acts on capillary moisture as weii as on free water.

Capillarity and Surface Tension

Mr. McLaughiin also found that the force which is variously termed capillarity, capiilary attraction, and surface tension, has been overrated. From statements which have appeared in textbooks and elsewhere the impression has been created that if moist soil comes in contact with dry soil, the moisture content in each will soon be about the same, due to the movement of water from the wet to the dry. Mr. McLaughiin found that when the wetter soil was placed in the soil boxes directly above the drier soil, that, largely through the action of gravity, there was considerable movement downward, but that when the positions of the two soils were reversed and the dry soii placed above, there was little movement upward. The results obtained by McLaughiin and others seem to establish the beiief that oniy relativeiy small amounts of water can be raised from a moist to a less moist soil; also that the bulk of such moisture can only be utilized by the extension of the root system to where moist soil is to be found. Apart from the top layer of soii there appears to be little movement of water from the subsoils upward.

The movement of water in soiis sideways from furrows depends on the nature of the soil. the amount of organic matter which it contains and other factors. In ordinary soiis a sidewise movement of two feet is about as much as can be expected, whereas in tight soils containing iittle organic matter and in poor physical condition it may not exceed nine inches in several days. Sometimes the water in its downward course encounters an impervious layer, becomes somewhat dammed up and then spreads laterally. Under such conditions the horizontal spread of water may be considerabie.

Distribution of Soil Moisture

In considering soil moisture and its distribution through soils and subsoils, some reference should be made to evaporation and the loss of water which it entails. A dozen years or so ago I carried on some experiments in California to determine this loss. These investigations showed that the loss of water by evaporation from irriyated soils, particularly when the entire surface is moistened, is very great for the first two days or so after water is appiied.

In summing up the situation in regard to soii moisture, there appear to me to be at least two essentials that deserve careful consideration. One of these is the amount of water which a soil of a given type will retain against gravity at each irrigation within the root zone of the trees, and the other is the smallest amount of moisture which a soil of a given type must contain in order to prevent damage to trees and their fruit.

We hear much these days about the optimum moisture content of soils, meaning by that the amount of moisture which is best for the plants. But this and other terms which I might name belong to the realm of theory rather than practice. It is not practical to maintain an even moisture content in the soil within the root zone of piants. The best irrigation practice merely enables the orchardist to fill up the soil with water without undue waste either by evaporation or deep percolation and to time the intervais between irrigations in such a way that the trees wiii not suffer for lack of moisture. This in turn brings up the question of how and when to apply water in order to attain these desired results. The California orchardist has little choice of methods. In the large majority of cases he must choose between furrow irrigation and some form of the basin method.

The Furrow System

In setting forth some of the good and bad features of these two methods of irrigation and in comparing their relative merits, perhaps the strongest argument in favor of the retention of furrow irrigation is that it is admirably adapted to the irrigation systems of the South.

A small head can be conveniently and advantageously used in furrow irrigation and it is also more economical of water than any form of flooding because the water surface exposed to evaporation is confined to a small fraction of the total land surface and a fairly large percentage of the surface soil is kept dry, thus preventing loss of water by evaporation. It likewise tends toward deep rooting and the preventing of root growth within the soii mulch covering. Furrow irrigation may also be used on a wide range of slopes from the flattest to the steepest and is about the only method which can be used on steep contoured side hills. Furthermore, it calls for little grading or displacement of surface soil and no special equipment other than the basin method. Taking the state as a whole, the average annual cost of appiying water by this method would be at least 30 per cent cheaper than by the basin method.

The chief objections are that the water is not distributed eveniy over the soil within the root zone and that the fertiiizers in the soii are not always conveyed by the water to the rootlets in the most efficient manner possibie. It is believed that much can be done to remedy uneven distribution by using shorter runs and adopting a better location and spacing of furrows. Instead of allowing water to run in furrows for 600 feet or more in porous soils, the length of runs should be reduced by one-half. Efforts should also be made to moisten the entire area from which roots can derive water and food.

The Basin Method

The basin method is best adapted to

The Deming "Century" for simpliiied spraying. May be mounted en side or head of barrel. Pump set low on barrel with cylinder submerged. Removal of 4 bolts only, makes valves and plunger accessible.

"A Barrel of Profit"

THE man who has never sprayed thinks of a sprayer as an expense—the man who has tried it knows it is a money-maker.

Here's the outfit for the beginner—big enough to do a good job fast, marvelously simple in design and mechanism for easy handling, and reasonable in cost—a first-prize winner in a National contest. Back of it are 40 years of specialized study on the design and building of pumps.

Send for the 1919 Deming Catalog—32 pages—free on request. 10c in stamps or coin will also bring an 80-page text-book on spraying.

The Cletrac runs on a pair of tracks like a locomotive

The Tracks Save Power

THE Cletrac Tank-Type Tractor runs on metal tracks like a locomotive. Six wheels, three on each side, carry the entire weight of the machine and run on the endless tracks which are laid down and picked up as the Cletrac goes along.

This distinctive and efficient type of construction enables the Cletrac to go practically anywhere. No matter what the soil conditions, it runs *on its tracks*—nothing stops it.

It doesn't have to expend *extra* energy to push *itself* along. This saves *power*, saves *fuel*, saves *time*.

The power isn't wasted propelling the tractor. It goes into the "pull" on the implement.

And the tracks being broad, *distribute the weight* of the Cletrac as snow shoes distribute a man's weight. Think what that means in the preparation of your seed bed. Think what a tremendous advantage it gives you on hilly ground. Think of the extra power and the lower upkeep under hard conditions. Think of the greater speed and the easier handling.

See your Cletrac dealer *today*. Early ordering is important. *Write for the illustrated booklet "Selecting Your Tractor".*

relatively flat slopes, large heads and a fairly liberal use of water. The winter irrigation of orchards can usually be carried out by this method more advantageously than by any other, since at such times water is usually plentiful, the work involved in forming basins can be done at a time when other orchard work is not pressing, and large quantities of water can be applied in a brief time. Another advantage is that it provides a miniature reservoir in which nitrogenous mater may be deposited, thus affording a speedy and direct means of adding nitrogen and other plant food to the soil within the root zone.

Some of the disadvantages of the unmulched basin as compared with furrows are its greater cost, the larger loss due to evaporation, the shifting of top soil for dikes and ditches, the baking of the surface soil and limitation of application to relatively flat land. Perhaps the most serious objection to the mulched basin is that it introduces a radical change in the process of root development. The removal of the mulch for even a short period in midsummer would be likely to result in the drying out of the moisture in the top soil, the destruction of the roots therein, and a setback to the tree itself.

For the Benefit of the Whole Community.

The pick of Fred W. Kiesel's Sacramento Holstein Ranch. This bull was presented by him to the state land settlement at Durham.

Summary

Summing up the relationship between soil moisture and orchard irrigation practice, the following points seem worthy of special consideration:

1. The great need of arid soils in general and of orchard soils in particular is an abundant water supply and a larger percentage of organic matter.
2. The effective water holding capacities of soils should be determined in order to find out how much water to apply at each irrigation and how often to irrigate.
3. Comparatively little moisture is drawn upwards through soils by capillarity. It is only where a water table is found within a few feet of the surface or where a body of free water comes in contact with the soil that this force is efficient in moving soil moisture.
4. Gravity acts on capillary water as well as free water and draws both downward unless a layer of hardpan or other impervious material intervenes.
5. The expense of substituting the basin method for the furrow mothod may be saved, providing the texture of the soil is improved by the addition of sufficient organic matter.

LAND SETTLEMENT

Continued from Page 473

agreed that the Holstein shall be used in the settlement dairies. This has permitted uniting in the securing of two valuable bulls, one purchased from the University Farm at Davis, the other presented by Fred Kiesel of Sacramento. Kiesel said, "Come to my ranch and take your pick." The "pick" is shown in photo on this page. Both of these animals are of finest breeding, and for their use every settler pays a stipulated fee arranged to cover overhead and the actual cost of the keep of the animals, which at present are on the ranch of Mr. Neilsen, who has the contract for giving them care and attention.

In beef, the Shorthorn has been chosen; in hogs, the Duroc. While I was taking the train on leaving I had the pleasure of seeing one of the hog breeders of the settlement making shipment of a Duroc boar to San Joaquin County. The high quality of the stock kept in the settlement is becoming known the state over.

As to marketing there has as yet been no community plan made; each individual markets or disposes of his produce as he sees fit, and this will continue although it is very probable a cooperativo effort will be made along this line as well as in the establishing of a creamery, cannery and other home factories. Even cooperative

purchasing has not as yet been engaged in, except in the matter of farm implements, and there special prices were secured for the settlers. Stores and the bank at Durham just at the edge of the settlement supply practically all needs up to the present time.

Mr. Kreutzer, while a comparatively young man, is considered the daddy of the bunch and finds his hands full in giving advice to both farmers and housewives. He does not take the position of farm adviser, and yet, from the nature of his work as superintendent of the settlement, is appealed to for all kinds of advice. At the time of my visit the one question uppermost in the minds of all was: "What is the best procedure in view of the anthrax situation." Greatest care is being taken to prevent the spread of this malady, which is serious in some sections of the Sacramento Valley. Mr. Kreutzer was advising inoculation and taking every precaution possible. Of course the settlement has the advantage of the services of the farm adviser of Butte County. Regarding Mr. Kreutzer's work the estimate put upon him by the land settlement board in its first annual report is as follows:

"The most important person in an enterprise like Durham is the superintendent. He can do much to make or mar any law. The rapid progress in the development and settlement of this area and the industry and unity which prevails among settlers is largely due to the efforts and influence of the superintendent, Geo. C. Kreutzer. Mr. Kreutzer has unusual natural fitness for this task. A graduate of the Colorado agricultural college, he has had experience in America in the operation of United States reclamation works; in Australia, in the administration of irrigation districts and in the management of settlements similar to that at Durham. Later as farm adviser of Kern County he secured the needed knowledge of conditions in this state. He combines marked executive ability and a definite knowledge of the next step to be taken, either by the settler, or by the board."

Contrary to an impression quite general these lands will not cost the taxpayers of California one cent. There was, however, an appropriation made for bearing the expenses of the land settlement board. This is expected to cover expenses during the life of the board, at least so far as that one project is concerned. The state did make an appropriation to be used in the purchase of the land, but this is to be returned with interest at the rate of five per cent and with an additional amount to cover all expenses of surveys, services of specialists, installation of water, or any other expenditure which added to the efficiency or worth of the lands secured by the settlers.

The success of this movement has been so complete that the recent legislature launched a movement for a far greater settlement plan. This calls for the appropriation of a million dollars to be temporarily placed in the hands of the settlement board, and with this it is anticipated that other land settlements will be made. For insance, it is expected that a portion of the Imperial Valley may be brought under some such a plan either as a nationally or state controlled settlement. Dr. Mead has issued a report regarding these lands in which we note:

"In Imperial Valley, on the southern border of California, there are over 200,000 acres of public land which can be irrigated from the Colorado River by a canal which would start at the Laguna dam and carry water both to the mesa land and to the Imperial irrigation district. This dam was built by the United States reclamation service and belongs to the government. A survey to locate the canal from this dam to the Imperial Valley, and an estimate of its cost, have been made at the joint expense of the United States reclamation service and the Imperial irrigation district.

"This land is the upper part of the gently sloping sides of the Salton Basin. The lower part of this great bowl, or basin, is the Imperial irrigation district, watered by a canal from the Colorado River, but starting farther down and making a long loop into Mexico before reaching the land to be irrigated.

"It is planned to build a high line canal, large enough to supply both the unirrigated mesa land and the Imperial district, and to have the entire canal on American territory. The Imperial district and the higher unirrigated land are both to share in its cost, hence less than half the expense of the main canal would be a charge on the mesa land. A bill has been introduced in congress authorizing the sale of the irrigable public land in tracts of 160 acres and the use of money thus obtained to help finance construction.

The elimination of speculation is one of the great advantages from this state control of land. Many a large tract has been purchased in California; improvements have been made such as roadways, irrigation canals, etc.; and then the original cost plus all improvements has been increased by 100 or even greater percentage to create a fund for advertising, commissions and profits. This has placed upon the land an undue burden which later settlers have had to carry. It is increasing the cost of living because such a system can only increase the overhead and put a burden, which must be carried for all future time, on the farming class. If the state cannot continue these settlements indefinitely, it at least has indicated where there may be great saving in farm land costs.

118-120 N. Los Angeles St. Los Angeles, Calif.

$15,000.00 Sale of Implements

You can SAVE from 30% to 50% on

New Plows, Cultivators, Sulkies, Tractor Discs, Garden Cultivators, Stock Cutters, Feed Cutters, Mowers, Pumps, Planters, Bolts, Shovels and Many Other Items

The Davenport Implement Company of 1032 East First Street, Los Angeles, has purchased the $15,000 stock of implements of the Los Angeles Implement Company at 110-112 North Los Angeles Street, Los Angeles and MUST MOVE THE STOCK AT ONCE. The stock we bought was for the most part originally bought at pre war prices. We bought it at a discount below these enabling us to *offer values that cannot be duplicated anywhere*—in many instances the offerings of well known dependable factories *at less cost to you than the factory cost.* We had to buy a larger stock than we have room to carry and we have made prices so low, when the price of steel and materials is advancing, that the stock is sure to move and move fast.

Look at the Big Price Reductions—You can SAVE over $100 on a Tractor Plow

TRACTOR PLOWS AND DISCS

The old reliable Casady power lift Tractor Plows 10, 12 and 14 inch. 3 gang regular price $366.00.
SPECIAL SALE PRICE ONLY $165.00.
These can be made into 2 gang plows.

Benicia Hancock 28 in. Engine. Single disc plow, (Beater type). Regular price $225.
SALE PRICE ONLY $117.50.

WARD FORCE PUMPS

Hand, wind or motor power several sizes selling everywhere for from $12 to $15.
SPECIAL SALE PRICE $8.15.

NO. 1 PILOT RIDING SULKY PLOWS

These are the Reliable South Bend plows 12 and 14 inch. Mouldboard bottoms, repairs in stock. Regular price $90.00.
SPECIAL SALE PRICE ONLY $57.50.

We have a good stock of chilled plows, steel and wood beams, assorted sizes, to be sold cheaper than you can get anything better like them in California.
No. 25 8 inch regular price $12.00.
SALE PRICE $7.50.

OTHER PLOWS IN THIS CLASS AT SIMILAR LOW PRICES.

BIG REDUCTIONS IN MOWING MACHINES

We bought 11 5 and 6-foot Crown Standard mowers that ordinarily sell for $102.50 and that are equal to any $100.00 mowers—we will sell these at prices below which they cannot now be manufactured.
$102.50 Crown Mowers at $73.50.

HAND CULTIVATORS

Combination hand cultivators a great implement for garden work. Regular price $4.00.
SALE PRICE $2.85.

ROSS FEED CUTTER AT $43.75.

This is new, 1 ton capacity and a great bargain.

GREAT REDUCTIONS IN WALKING PLOWS

An extraordinary opportunity to buy New South Bend walking plows, subsoilers and general purpose plows—none better made—
No. 19, 12 inch wood beam, regular price $29.00.
SALE PRICE $22.50.

No. 40, 10 inch, regular price $25.00.
SALE PRICE, Wood Beam, $18.50.
Steel Beam, $19.50.

Big Reductions in these Miscellaneous Items—All Good Usable Materials Bought Cheap at Pre War Prices

HAY CARRIERS (Meyers)

Regular price $12.00.
SALE PRICE $6.85.

SHOVELS

Regular price $1.00.
SALE PRICE 65 CENTS.

**Today's Dream—
Tomorrow's Reality**

Electricity offers to the farmer of the present the means of eliminating the monotonous grind from the day's routine.

G-E Motors Save Labor

You can free yourself from the physical exhaustion resulting from farm drudgery if you use G-E motor-driven machinery to milk your cows, separate cream, churn butter, cut feed and ensilage, saw wood, thresh grain, pump water and perform the many other tasks which make up the necessary activities of the working day. The cost for power is less than the wages of one farm hand. Ask your lighting company or our nearest office for full particulars.

October Lawns

By Ernest Braunton

OF THE autumnal season this is the best time to put in new lawns and if properly done the results will equal the best spring planted lawns. Fall lawns are not recommended for the colder sections of California for sharp frosts will injure young grass when it is in the milk stage. But for the greater part of the state October lawns are advised.

The preparation of the soil must be thorough for you cannot get under a lawn once it is planted, either to improve the soil or make smooth the surface. As you leave it so it will remain; getting poorer with time, rather than better. Do not depend wholly on feeding lawns from the top except for incidental annual fertilizing. You must have a good foundational soil, therefore it must be rich, and permeable to the fine grass roots. Sandy soil will not produce a good lawn, but black adobe, if well worked over, will support one to the highest point of excellence. Four inches of good stable or dairy fertilizer well mixed in the soil is what should be spread on every area where lawns are to be made.

Pulverize the soil as finely as possible, for it must be settled before sowing until it is as smooth as a house floor. After once sowing it can never become smoother. After the grade is perfect it must be sown from the far side toward the front. For this purpose use boards and sow from back to front, taking up the boards as you retreat (?) (toward the front). Before sowing sprinkle the soil a little so the seeds will stick to it and not blow about. Grass seed is very light and a windless day or time must be chosen. After sundown is generally best. Sow the seed very evenly. If you wish to mix clover with it sow clover separately and first, as wind will not move it. Before taking off the first boards sow an inch of well rotted sifted stable manure over the seeded portion and you will have the job of planting finished.

Watering must be very carefully done. If force is used the manure covering and seeds will be driven into spots or streaks and if too much water is used the manure and seeds will float into islands and leave bare spots. You cannot water a newly sown lawn too often but you can easily water it too much. If weather is hot four times a day is not too often to spray; if weather is cool it should still be sprinkled twice a day until the grass is up. After grass is tall enough to cut, get in with the mower at once, but be careful how you step. If you can it is best to mow a little strip along the edge, then put down a board to walk on and so on with boards across the area, never stepping on the lawn at all. As soon as weeds are big enough get in on these same boards and pull them. Have one board to kneel on and another so your toes will rest on it or you will dig holes in the young grass. In final preparation of the soil it is better to use a roller to settle it after being thoroughly dug up, and if you have such roller, use it to roll the young lawn after each of the first two or three cuttings or weedings. On small lawns gardeners tread all the surface over with their feet, to be sure of no imperfections in the surface. Careful attention to these directions will give you the best of lawns, for the writer has made several with his own hands and has had acres made under his direction, of the very cream of lawns. Use a pound of grass seed to 200 square feet, or an area 10x20 feet; clover seed will cover one-third more space.

October Bulbs

October is the first month in which fall bulbs are planted and many do not plant any until November. It makes some difference what the season is and in what part of the state one lives. There is no question but those living on or near the coast may plant bulbs earlier than those in the interior valleys except in seasons of early rainfall. To be explicit: bulbs need cool weather for best development.

Cyclamen, freesias, and the early dwarf gladiolus of the Blushing Bride type all do well through early planting. Watsonias should go in at once; they are as well planted in September. As soon as lilies are available they may be planted; too often they are late in arrival. The first planting of Dutch or Holland bulbs may now go in the soil but if the weather is hot the first of November is time enough in the south half of the state. These bulbs are anemones, daffodils, hyacinths, French buttercups or ranunculus, and tulips. It is best, if you plant many bulbs, to make two or three plantings a month apart, so you may have flowers over a long period.

Cosmos in the Corner

Cosmos are tall plants and must be put away in corners and backgrounds, allowing lowlier plants to hold the foreground. As Cosmos are fine for winter flowers and should be sown now, in my own garden I am sowing them in a wide border against the fence and in the foreground sowing calendulas. Cosmos usually are sold in four shades or colors, white, pink, crimson and yellow. But of late years intermediate shades and new forms have brought us named varieties that are very attractive. In the common Cosmos the whites, pinks and crimsons have a yellow disk as they have in the nearly related yellow species, but in a dark red species the disk or button is also red. All species are native to Mexico.

Plant Improvement

Do not hesitate to tackle improvement of plants, flowers or fruits. By selection the chrysanthemums of today, with all their size and gorgeous colors, came up from a yellow flower the size of a five-cent piece. The dahlia by selection had been brought to a showy flower before white men found it and therefore its domestication is very old, but the wild species today are single flowers two inches across. In the fruit line considered how the common apple has been elevated in size and quality from the wild apples of several countries. And even today the apple will run wild if allowed to, in many parts of our country. It is our privilege, and our duty, to combat this return to the wild and by constant selection and breeding ever improve all life under our charge, whether animal or vegetable. Keep up the selective process at all times.

Prehistoric Big Trees

Big trees closely allied to our giant sequoias lived in ages long past. In Spitsbergen in soft, fine grained black shale forming roofs over coal beds the branches and leaves of Sequoia Nordenskialdi are very common and in thin seams of coal, branches, leaves and cones of Sequoia Langsdorfi are found in great quantities. There are also found fine fossil specimens of the same bald or swamp cypress, Taxodium distichum, that grows in the United States today, also fine specimens of many other trees of genera common in the United States, although they flourished ages before our known history began, and many of these fossil remains are found in the soil of the now treeless windswept plains of the Dakotas, Wyoming and Montana. A layer of fan palm leaves a foot in thickness was found in a formation in the northern part of the state of Washington.

Growing Laurels, Etc.

Complaints are common that southern laurel, Kalmia latifolia and plants that grow under similar conditions cannot be grown in California. When received they flourish for a time and then dwindle and die. This will be especially true if the soil is alkaline to even a slight extent, and death will be speedy. The secret of success lies in producing an acid condition of the soil. This may be done by introducing decaying vegetable matter in considerable volume. Oak leaf mold is commonly used in California, but get the rotting and dry leaves together, not the rotted, rich, black leaf mold be-

neath. For rotting oak leaves are acid while thoroughly rotted they are alkaline. This holds true as proper treatment for many plants said not to thrive in California. Trailing arbutus will grow here in soils of sufficient acidity.

Plants in Arid Regions

The gardens of Arizona cities, according to Prof. Volney M. Spalding, constitute an experiment station in which year by year the availability of one species after another for desert planting is being determined. From the great number of plants successfully cultivated there seems, at first sight, to be sufficient justification for the reiterated statement that anything will grow there if only you will give it water enough, but closer attention to the actual facts make it evident that this statement is true only in part, and that there are many plants that grow indifferently well or not at all, especially during summer. Geraniums, a universally easily raised plant of moister regions, are very uncertain. Cannas and gladioli, which grow side by side in the east, part company here, the former making a good growth and the latter failing altogether.

Reviving Wilted Flowers

If a really cool place with cool water is to be had wilted flowers will slowly come back to condition and this may be the best way of all to handle hard-wooded stems such as roses. But with herbaceous stems as in dahlias, gladiolus, iris and a host of others a plunge of stems in hot water is the quickest and surest means of revival. The water should be well toward the boiling point.

Peonies in California

There is no reason why peonies may not be successfully grown in all parts of California. For three years past the writer has noted them in several gardens where each year they were of the best, no failures. The aim should be to keep the roots cool, either by constant cultivation, mulch or planting on the north side of a fence that has a base board a foot above the ground; but some gardens bear fine flowers without any special care.

Giant Tree Ferns

Ferns of nearly all kinds thrive best in a humid atmosphere and in California near the coast, yet fine tree ferns grow in this state far inland, when provided with sufficient shade. Under large native trees they flourish best.

The tallest tree fern known is the very rare Alsophila excelsa from Norfolk Island, to the east of Australia. The trunk has been found as tall as eighty feet while A. MacArthur found upon Lord Howe's Island attains seventy feet. In American tree ferns A. armata of Jamaica has grown to fifty feet high. The West Indies contain a number of species of fine tree ferns.

GARLIC

By D. F. Relchard

Garlic is one of the aristocrats this year, as it has been for the past two years. It is commanding unusual prices. The demand for a couple of years was heavy and last year it was so high that the usual growers of garlic sold their sets because they could get more for the bulbs than they ordinarily get for the crop produced from them; therefore another scarcity of garlic and the resultant high price.

Garlic is grown from sets or cloves planted just under the surface of the ground. The mature bulbs are broken up and the cloves are set about six inches apart in rows 12 to 18 inches apart. The ground should be a rich, well drained soil, convenient to irrigate, for best results. The settings may be made in late fall or early spring. October plantings are to be preferred because they have the winter rains to keep up their growing and they develop an early crop and harvest.

In the culture of garlic, as with onions, the surface must be kept loose and the bulbs allowed to develop as nearly on top of the ground as is practical. Irrigation will be necessary when rains or natural moisture are not sufficient. Furrow out and apply the water in the centers between the rows. Do not allow the water to get around the plants. Cultivate carefully after each irrigation.

There are no pests or diseases that attack garlic so that the crop depends on the soil in which it grows and the care given. It can be grown wherever onions are grown and on hillside land where the moisture is not sufficient to develop good marketable onions.

There are three varieties of garlic, White, Pink and Imperial. The Pink and White are of the old flattened round type of which the Pink is the more productive and most used. The Imperial was developed in the Imperial Valley and is more of a conical shape, having more than one tier of cloves overlapping. The Imperial is a great improvement over the older varieties but is almost entirely out of the market at present.

It requires 200 to 300 pounds of bulbs to plant an acre. The yield under proper conditions should be about 2500 pounds. Discontinue irrigating when the bulbs are well formed and the foliage begins to turn brown or die. Harvest when the stems are well wilted by pulling and throwing the plants into piles to dry for a few days. The foliage is then cut off leaving about an inch of the stem on the bulb. Store in shallow crates where they can get good ventilation.

The Annual Meeting of the National Grange will be held at Grand Rapids, Michigan, November 12-23, 1919. A reduced rate of a fare and a third, on the certificate plan, has been granted by all railroads on account of this meeting.

DR. FORBES WRITES FROM EGYPT

Dr. R. H. Forbes, formerly dean of the college of agriculture of Arizona and now connected with the Societe Sultaniene d'Agriculture of Egypt, writes an interesting letter from Cairo which is quoted from a recent number of the Reclamation Record.

"Egypt is an easy transition from our own Southwest. The climate is generally the same and the crops specifically so; while the Nile and the Colorado belong in the same great family of irrigating rivers. The economic conditions are, however, vastly different. Sand is costly and labor is cheap, being, therefore, abundantly and intensively used in place of machinery, as with us, on the land. It gives one a wrench, though, to see a man cleaning a ditch with nothing but his hands to throw out the mud, or at best a basket with which to carry it out. Just at this time, with high prices for labor (35 cents a day for a good workman) there is an impetus toward the use of machinery, but as yet with very little result. Large ignorant populations move slowly, and the would-be improver of agricultural practice must look very carefully for the lines of easiest understanding along which to work. To begin with, I am introducing the successful varieties we grew in Arizona, of ceru, wheat, legumes, etc., for it is a scientific matter to substitute a good seed for a poor one, and the result is conspicuous and easily understood. The first crops were quite satisfactory, and the coming season's work will include additional New World introductions which should add to the list of returns which we are making to the Old World for past contributions to our own prosperity.

"Incidentally, there is still much to learn from even the Egyptians of more or less direct profit to our own agriculture, and it is very interesting to study out the details of their beautifully close fitting scheme of agriculture, which has been hammered into shape through so many years."

SANTA BARBARA HORTICULTURAL SOCIETY

The Horticultural Society of Santa Barbara County will hold a fall flower show on October 22 and 23 in Santa Barbara at Recreation Center. Principal exhibts will include chrysanthemums, dahlias, roses, annuals and pumpkins. Free exhibition entries invited, which should reach the secretary one week before date of show. Many displays are expected from the large estates in Montecito and many of the owners have donated prizes as also have seedsmen of the state.

The officers of the society are: President, P. A. Vincent; secretary and treasurer, Otto Neidemuller; publicity manager, A. R. Gould.

International Tillage Brings Bigger Yields and Better Grades

MANY are the uses, and great is the value of a good disk harrow. More than any other farm tool, its proper use takes the gamble out of crop raising. The perfect seed bed that causes quick, strong germination of the seed, rapid growth of the plant, and even maturing of the crop, cannot be made without a disk harrow. A good one costs so little, and plays such an important part in determining the yield and value of your crops, that its purchase deserves really serious consideration.

Knowing the character and condition of your soil as you do, you will know whether to buy a two or three-lever harrow, a tandem, or one of our new leverless tractor disks, but, whichever style is best for your work, you will find a high-grade, up-to-date harrow of that style in the International line, and of a size, suitable to your power equipment. We have sold disk harrows for years, but never was the line so complete, or of such high quality, as the line we offer for 1919. The local dealer will explain the value of the many features we have not space to mention here.

Other useful implements in this line, each built for its own special work, are open end, closed end, and flexible peg-tooth harrows, spring-tooth harrows with single and double end teeth, and one-horse cultivators with every kind of tooth and shovel equipment. These, too, can be seen at the local dealer's place of business, or we will send catalogues on request.

Glance over the list of machines in this advertisement and write us for full particulars about any in which you may be interested.

The Fresno Fair

THE Fresno district fair opened at Fresno, September 30, under conditions that promised everything but a successful show. On the opening morning there was a heavy rain, but before noon the skies cleared and the attendance the rest of the week was highly satisfactory. It was said that the Wednesday crowd was the largest in the history of the fair.

Few fairs of any size in this state have more attractive grounds and buildings, and with the improvements noted this year excellent facilities are provided for the exhibitors and visitors.

The horticultural and agricultural exhibits were in every way representative of the possibilities and resources of the famous district. The different town and farm center exhibits were very creditable. Clovis was awarded first prize over six other towns in Fresno County.

The show of farm machinery and tractors was especially pleasing.

The live stock show was hardly as well balanced this year as last, there being no entries in the beef classes. Such a condition should not prevail. Fresno is the center of an extensive cattle section and the fair management and the breeders of this state should make an effort to strengtnen this very important department.

The entries in the horse department were also very mediocre.

The dairy cattle department was rather better balanced this year than last.

Holsteins

Five herd of Holsteins competed for the liberal prizes offered. The Higdon, Cornwell and Holmes herds had met at the state fair. The Phillips herd, which has recently been strengthened by the addition of several high class animals from Eastern herds, made its initial show. Mrs. Annie Donders had a small exhibit. Higdon had the senior, junior and grand champion bulls, King Korndyke Pontiac 20th winning final honors over Model Bonnie Fobes De Kol, the senior yearling. Cornwell's two year old Ciruela Walker, first in class at Sacramento, was tied senior and grand champion. Holmes' senior heifer calf was junior champion.

Prof. C. W. Rubel judged all dairy classes.

Exhibitors: W. J. Higdon, Tulare; J. P. Phillips, Fresno; H. E. Cornwell, Modesto; R. L. Holmes, Modesto; Mrs. Annie Donders, Fresno.

Aged bull—1, Higdon; 2, Cornwell.
Two year old—1, Holmes; 2, Phillips.
Senior yearling bull—1, Higdon.
Senior bull calf—1 and 2, Higdon; 3, Phillips.
Junior bull calf—1, Mrs. Annie Donders; 2, Higdon; 3, Holmes.
Aged cow—1, Phillips; 2, Higdon; 3, Higdon.
Two year old—1, Cornwell; 2, Phillips; 3, Higdon.
Senior yearling—1, Higdon; 2, Phillips; 3, Higdon.
Junior yearling—1 and 2, Higdon; 3, Phillips.
Senior heifer calf—1, Holmes; 2, Higdon; 3, Holmes.
Junior heifer calf—1, Higdon; 2, Holmes; 3, Higdon.
Senior champion bull—Higdon.
Junoir champion bull—Higdon.
Senior champion female—Cornwell.
Junior champion female—Holmes.
Grand champion bull—Higdon.
Grand champion female—Cornwell.
Aged herd—1, Higdon; 2, Phillips.
Young herd—1, Higdon; 2, Phillips.
Calf herd—1, Higdon; 2, Holmes; 3, Phillips.
Produce of cow—1 and 2, Higdon; 3, Phillips.
Get of sire—1 and 2, Higdon; 3, Cornwell.

Jerseys

J. E. Thorpe of Lockeford and A. A. Jenkins of Tulare fought for the top places in each class, with the former getting the majority of the leads. The bull championships were divided between the two herds, Thorpe taking the senior placing and the grand championship. Thorpe had both the female champions. E. R. Eichner of Selma also showed.

Exhibitors—J. E. Thorpe, Lockeford; A. A. Jenkins, Tulare; E. R. Eichner, Selma; Di Donato, Clovis.

Aged bull—1, Thorpe; 2 and 3, Jenkins.
Two year old—1, Eichner; 2, Di Donato.
Senior yearling—1, Jenkins; 2, Thorpe.
Junior yearling—1, Jenkins.
Senior bull calf—1, Thorpe; 2, Jenkins; 3, Eichner.
Junior bull calf—1, Thorpe; 2, Jenkins; 3, Eichner.
Aged cow—1 and 2, Thorpe; 3, Jenkins.
Two year old—1, Thorpe; 2 and 3, Eichner.
Senior yearling heifer—1, Thorpe; 2, Jenkins; 3, Eichner.
Junior yearling heifer—1, Jenkins; 2, Thorpe; 3, Eichner.
Senior heifer calf—1 and 2, Thorpe; 3,

Over the Top—the Sale of the Year

A Complete Dispersal Sale of

Our Milking Herd of Registered Holstein-Friesian Cows

Wednesday & Thursday, November 5th & 6th, 1919

100 Cows with First and Second Calf 100

We find it necessary to reseed our land to Alfalfa, therefore we are offering our entire herd of Registered Holstein-Friesian Cows. We are keeping only their calves. These cattle were selected with great care from Pure Bred herds in New York, Michigan, Ohio and Wisconsin. They were purchased as calves and yearlings in the East, grown out and developed on our ranch and are the CREAM of the six carloads which we purchased for our Foundation Herd.

63 now on Year's Test for Milk and Butter. Several have finished their Year's Test and have made good records. They are Choice Individuals doing GOOD WORK with ordinary Herd Feed and care and they are getting BETTER every year. YOUR OPPORTUNITY TO GET STARTED RIGHT with GOOD EASTERN BRED REGISTERED HOLSTEIN-FRIESIAN COWS that carry the Blood of GREAT MILK AND BUTTER PRODUCERS.

All Tuberculin Tested — Write for Catalog

GEO. A. SMITH & SON, Owners — **Corcoran, California**

The Keep On Herd Register of Merit Jerseys

Fifteen Keep Ons won twenty-six prizes and one gold medal. All three first prizes for production went to the Keep Ons. Grand Champion cow and Champion butter cow won by Keep On Herd. Buy a Keep On and get the best. Nothing finer or better. Bred for both show and production. Males and females at reasonable prices. Write your wants.

Dr. H. W. Hand — Orland, Calif.

BREEDERS OF MILKING SHORTHORNS

Senior Herd Sire Oxford Duke 2nd No. 396933, a splendid type of the dairy Shorthorn
Junior Herd Sire Grand Wapsie No. 641734, sired by the 17th Duke of Wapsie

We are offering some young bulls and females of extra breeding and individuality from these sires and the choicest dams in our herd. Tuberculin tested. Write for particulars.

THE JOHN LYNCH RANCH
P. O. Box 321 — Petaluma, Calif.

100 REGISTERED HOLSTEINS 100

—AT PUBLIC AUCTION—

C. A. Miller Ranch, Ripon, Calif.

Thursday, October 30, 1919

In this sale C. A. MILLER will disperse his entire herd with the exception of two cows and a few heifer calves, about 50 head; GOTSHALL & MAGRUDER will contribute 30 head; H. A. De WOLF will contribute 20 head. The cattle are one of the best bred lots to be sold this season, and include a very large percentage of young animals from calves up to open and bred heifers, and young cows, mostly with A. R. O. records or from A. R. O. dams.

A. R. O. COWS WITH RECORDS UP TO OVER 28 LBS. BUTTER IN 7 DAYS.

HEIFERS FROM DAMS WITH RECORDS UP TO OVER 32 LBS. BUTTER IN 7 DAYS.

COWS AND HEIFERS BRED TO A 33 POUND SON OF KING MEAD OF RIVERSIDE.

Holsteins and The Milk Check

The size of your check depends less upon the size of your herd than upon the size of your cows. Get big, healthy, pure bred cows with the ability to convert feed into milk at a profit.

Wherever dairying is on a prosperous footing, that's the home of the Holstein cattle. Besides being the leading dairy breed, they bring top prices when beefed. They breed regularly, and the calves are easily reared.

If interested in

HOLSTEIN CATTLE

send for our booklets and inform yourself on how to make money in breeding dairy cattle.

The Holstein-Friesian Association of America, Box 120, Brattleboro, Vt.

10 Jersey Bulls

We have recently purchased the entire pure bred Jersey herd of Houston & Son, Imperial, — 143 head, and offering young bulls from $50 up. These are bred in the purple. Write for particulars.

Young herd—1, Thorpe; 2, Jenkins.
Calf herd—1, Thorpe; 2, Jenkins.
Produce of dam—1, Thorpe; 2, Jenkins; 3, Eichner.
Get of sire—1, Thorpe; 2, Jenkins; 3, Eichner.

The feature of the dairy show was the winning of the Chandler special herd class by the Thorpe Jerseys over the entire field. In this class, which is really an interbreed contest and therefore very unsatisfactory to judge, $500 is divided in four prizes.

W. F. Chandler Special Dairy Herd Prize, each herd to be one breed of 10 animals and consist of 1 bull two years or over, 4 females three years or over, 1 bull under two years, and 4 females under three years—1st, $200, J. E. Thorpe, Lockeford; 2nd, $150, W. J. Higdon, Tulare; 3rd, $100, J. P. Phillips; Fresno; 4th, $50, A. A. Jenkins, Tulare.

Poland-Chinas

The feature of the Poland-China show was the class and quality shown by the animals exhibited. H. D. McCune, Lemoore, had the first aged boar in King's Massive Orange. Chas. Gatewood won first junior yearling and grand champion boar with his star fair ground champion, Giant Bob. In one of the hardest classes of the show Fred Gatewood won first senior boar pig and junior champion on Fresno Boy. It seems to be characteristic of the Gatewoods to develop grand champions. In the sow classes A. Buckland & Son won first aged sow with Wonder King, an excellent specimen of the breed, and she was later made grand champion. One of the most difficult classes to judge was that of senior sow pig, due to the exceeding high quality of the 16 animals shown. W. T. Dice of Hanford was the winner on Cora Giantess, and she was also made junior champion.

Exhibitors: A. Buckland & Son, Fresno; Fred Gatewood, Fresno; Chas. Gatewood, Fresno; Chas. E. Dack, Fresno; Fred Grant, Fresno; Harry Barkema, Fresno; H. D. McCune, Lemoore; W. T. Dice, Hanford; A. W. Uridge, Kerman; J. C. Palmateer, Kerman; Joel Hall, Kerman; J. W. Hall, Caruthers; J. Van Cleef, Riverdale; E. S. Meyers, Riverdale; W. L. Choisser, Riverdale; Thos. Caesar & Son, Reedley; N. H. Mason, Selma; O. T. Hess, Ceres; Ira L. Mason, Fowler; Elmer Almgren, Reedley; Leslie Bisel, Fresno; J. W. Jones, Caruthers.

Following are the awards:
Aged boar—1, McCune on King's Massive Orange; 2, Grant on Favorite's Best.
Senior yearling boar—1, Buckland on California Jumbo Buster; 2, F. Gatewood on Fresno Sampson.
Junior yearling boar—1, C. Gatewood on Giant Bob; 2, Caesar on Roseland Jumbo; 3, Hess on Fresno Prince.
Senior boar pig—1, F. Gatewood on Fresno Boy; 2, Van Cleef on Vaughn's Jones; 3, Mason on Smooth Leader.
Junior boar pig—1, C. Gatewood on Young Bob; 2, Johansen on Victory Bob; 3, Dack on Binna Boy.
Aged sow—1, Buckland on Wonder Kings; 2, Bissel; 3, Jones on Big Mabie.
Senior yearling sow—1, Barkema on Raisin Queen; 2, Caesar on Model Sunnydale; 3, Choisser on Rose Royal 4th.
Junior yearling sow—1, C. Gatewood on Forrestview Annie 2nd; 2, Dice on Miss Smooth Orphan; 3, Dice on Young Rosebud.
Senior sow — pig—1, Dice on Cora Giantess; 2, Caesar on Miss Smooth Wonder; 3, Almgren on Sallie.
Junior sow pig—1, C. Gatewood on Polandale Betty; 2, C. Gatewood; 3, Dack on Annie's Fall Girl.
Aged herd—1, C. Gatewood; 2, Buckland.
Young herd—1, Buckland; 2, C. Gatewood; 3, J. W. Hall.
Get of sire—1, C. Gatewood; 2, Buckland; 3, J. W. Hall.
Sow and litter—1, C. Gatewood; 2, Buckland; 3, Jones.
Grand champion boar—C. Gatewood on Giant Bob.
Junior champion boar—Fred Gatewood on Fresno Boy.
Grand champion sow — Buckland on Wonder King's.
Junior champion sow—Dice on Cora Giantess.

In the Poland-China futurity prizes were awarded for best litter of four pigs as follows:

1, C. Gatewood; 2, Dack; 3, Buckland; 4, J. W. Hall; 5, Van Cleef; 6, Jones; 7, Barkema; 8, Myers; 9, Carsten & Holloway; 10, Harris.

Duroc-Jerseys

The remarkable rise of this breed in the Fresno territory the past few years was evinced by the largest exhibit, according to a number of breeders present, at any Fresno fair. Joe Chinowth won first aged boar with Joe's Orion Cherry King 5th and first senior yearling, that was first in class at state fair, with Lord's Orion Cherry King. J. E. Thorpe, Lockeford, had

will go to the highest bidder at

Roselawn Stock Farm, Woodland, Calif.

H. M. ELBERG, Proprietor

Thursday, October 16, 1919

CRESCENT DALE

Owing to the material reduction of the herd, occasioned by the settlement of an estate and the readjustment of some farm leases, one of the herd bulls, CRESCENT DALE, will be one of many star attractions among the offerings. This excellent sire combines a pedigree that is hard to fault with a degree of breed character and type that is highly desirable in the head of a high class herd, and his calves stamp him as a sire of proven ability to get offspring of most approved type and quality. A well balanced group of seven Scotch and Scotch topped bulls rounds out a select offering of bulls suitable both for breeders and rangemen.

39 Scotch and Scotch Topped Females

The fifteen great cows with calves at foot, and the beautiful lot of heifers must be seen to be appreciated, but brief mention of a few gives an index to the breeding and quality that buyers will find on sale day, and among them we find: MISCHIEF E 3D, undefeated in Canada, Grand Champion at 1918 California State Fair, dam of Roselawn Champion, junior champion bull in same show; ROSIE MAYFLOWER and MAYFIELD MAGNOLIA, both sired by the University Farm bull Sultan Mayflower, who sired the 1918 Chicago International champion Shorthorn steer and the $5500 bull California Model; LOVELY'S PRIDE 3D, a beautiful roan heifer of the Cruickshank Loveiy family, bred to Roselawn Champion; PEACEFUL 5TH, by Golden Goods, selling with heifer calf at foot by Crescent Dale; and a long list of others of exceptional merit.

IT IS ALSO A MATTER OF PRIME VALUE TO BUYERS THAT ALL THE BRED FEMALES IN THE OFFERING ARE IN CALF EITHER TO CRESCENT DALE OR ROSELAWN CHAMPION.

Every animal guaranteed to be a breeder

Every animal over 6 months old tuberculin tested

SALE CALENDAR

Shorthorns
October 16. Dr. H. M. Elberg, Woodland.

Hereford Cattle
November 7. Third annual sale Pacific Coast Hereford Breeders' Association, San Francisco.

Poland-China Swine
October 11, Kings County Poland-China Breeders' Consignment Sale, Hanford.
October 18, Trewhitt, Vaughan and Nehls, Hanford.
October 21, Tulare County Poland-China Breeders' Association, Tulare.

Berkshire Swine
October 22. Western Berkshire Congress, Los Angeles Livestock Show.

Fred M. Johnson, Duroc-Jersey breeder of Napa, who recently disposed of his entire herd to Harvey M. Berglund of Dixon, is now in the East where he expects to purchase 40 high class sows and a boar the equal of any in the West. Johnson will attend the National Swine Show.

John A. Bunting, secretary of the Pacific Coast Hereford Breeders' Association, writes that the latest breeder to join the association is Edward Morgan of Northam, Nevada. Morgan has been identified with Hereford affairs in the West for many years, having been herdsman for the late Governor Sparks. While with Sparks, Morgan made several importations from England.

W. D. Duke, Likely, Modoc County, owner of the Alamo herd of Herefords, has bought the Wadsworth ranch in Siskiyou County and plans to transfer his herd to his new location. The purchase price for the ranch, which is one of the largest in Northern California, is said to have been $325,000.

Defender's Ohio Maid is the great Duroc-Jersey brood sow owned by W. Moore, Fallbrook, San Diego County. This fine sow was a close second to the noted Winsor Ranch sow, Model Defender Lady, at the San Diego fair. Added to this distinction she farrowed a litter of 11 fine pigs the night before the show.

Moramarco Bros., breeders of Poland-Chinas at Van Nuys, Los Angeles County, have purchased a part of the well known Whitley "show place" adjoining town.

D. H. Ogden of Alpine, San Diego County, was showing a nice string of young Herefords at San Diego last week. The Ogden Herefords are entered for both the Riverside and Los Angeles shows. They are representative of one of the largest breeding herds in the south end of the state.

For uniformly big type Durocs Falfadale Farm stands in a class by itself. At this fine breeding headquarters at Perris, Riverside County, are to be seen today no less than 18 first class sows mated for fall litters to the great boar, Winsor's Giant Orion, the largest boar of the breed even seen on the Pacific Coast. At the Riverside and Los Angeles shows this month will be seen a fairly representative exhibit from Falfadale Farm at the head of which will be the great young boar, Great Orion Sensation, Jr., selected in person by Manager "Burt" Wilkinson from the leading show herd of Nebraska. Since it required $2000 in cold cash to buy this young hog it will be more than a mere matter of curiosity among up to date breeders of Durocs to size up his merits. Mr. Wilkinson argued that with the high class sows at Falfadale Farm he needed the best boar that money could buy. See the herd at the fairs.

First in war and first in peace—that is the scheme and plan upon which the Underhill Hampshire breeding operations are to be conducted at Santa Barbara. It was the Underhill Hampshires that blazed the way for quick progress in the Hampshire field in the Pacific Coast country through the staging of a public sale of breeding stock in the month of July. All went well on sale day, every animal catalogued finding a ready buyer. At this time there are yet to spare at Underhill Rancho some high class bred sows of exceptional breeding; likewise some fine yearlings, both gilts and boars. There are a pair of yearling boars also of tip top breeding, but they cannot be longer used in this herd. Manager Dunsmore reports prospects the very best.

The Ireland Ranch, Owensmouth, has recently sold four fall yearling daughters of Cherry Volunteer 2d to T. P. Tupman at Bakersfield for $600. The Ireland Ranch bred sow sale is booked for January 31—an event that should close the year's operations at this well known Duroc breeding headquarters in a blaze of glory.

The offering at public sale in Hanford, Saturday, October 18, of bred Poland-China sows and gilts by Messrs. Trewhitt, Vaughn and Nehls will include such as My Giantess, E. Choice 1st, To Wonder, Miss Orphan and Sunlight Giantess. In speaking of these sows Messrs. Trewhitt and Vaughn said: "These are the kind that are bringing the top prices in the eastern sales." Some were selected by Mr. Vaughn on his visit to eastern herds last winter. They will be bred to good boars and have the very best blood lines. Seventy head will be sold, most of which will be bred.

W. D. Trewhitt in announcing the sale that he, together with C. A. Vaughn and G. H. Nehls, will hold in Hanford, October 18, says: "The animals to be sold are all of big type breeding, as that is what is wanted by the farmers and breeders today. We have selected what we consider a high class lot of sows and gilts. The sows have proven prolific and conform to the high standard set for size, type and breeding. Seventy head will be sold in this sale and no doubt there will be a large number of buyers in attendance. It is highly improbable that a better lot of individuals will be sold this year, and no doubt the results of this sale will show that good Poland-Chinas will always find a ready market.

The Tulare County Poland-China breeders are making every effort to make their first sale a big success. This sale will be held in the new live stock pavilion, Tulare, Tuesday, October 21, and 46 bred sows and gilts and four young boars will be sold. Particular attention has been paid to the selection of the animals to be sold as well as the blood lines of the individuals. Hugh C. Shinn, secretary, states that the offering includes outstanding individuals sired by some of the best boars on the Pacific Coast. The sows and gilts will be bred to boars the equal of any found in the state, and that assures the purchaser a litter of correct type and breeding.

Elliott-Brant Rancho, Guernsey headquarters at Owensmouth, is now well launched in the Duroc game. About 65 fine pigs are in evidence in the fall litters, the get of the big junior yearling, May Rose King.

Donald H. Graham, breeder of big Durocs in the Antelope Valley, plans a "coup" for 1920 with his big junior champion boar, Orion's King Gano. As senior yearling the big fellow is looking tip-top, but he will rest on his laurels the present year in the interest of future triumphs.

Under new and thoroughly competent herd management the Fred Hartsook big type Poland-Chinas at Lankershim are now in the very pink of condition, with about 50 big pigs in the fall litters.

Eastmont Farm at El Monte, Grant A. Brown, owner, will present a young herd of Jerseys at both Riverside and Los Angeles. These young Jerseys are to feature the three year old herd bull Lady's Shylock's Financier.

Burr Farm, Holstein headquarters on Downey Road, Los Angeles, under the energetic management of Geo. M. Brown, will do some effective breed publicity work at the big live stock shows in Southern California.

The Ortega Underhill Ranch at Santa Barbara has at head of herd of Hampshires three great boars of the breed; Gen. Allen's Counterpart, Draper Laddo, and Tipton Senator.

Falfadale Farm, noted Duroc breeding establishment at Perris, owns some of the great brood sows on the coast, daughters of P. L. and W's Great Model, litter brother to the noted Winsor Ranch boar Great Model.

Kill the Hog Lice

Keep your hogs' skins healthy and free from lice and you'll get more pounds of l. gh priced pork. Sprinkle Dr. Hess Dip and Disinfectant freely about pens, feed troughs and yards. Use it the year round to kill lice—to destroy disease germs—to purify the air—to ward off contagious diseases. Disinfect the barns and poultry houses. Also use it about the house. in the sick room, in sinks and cesspools to establish better health conditions.

have sired some wonderfully fine pigs. Big type Poland-Chinas by these two boars for sale at a reasonable price. Write immediately for full description. Fully guaranteed to satisfy

R. J. Yates, Orland, Cal.

When Writing Advertisers, Mention The Cultivator.

A. B. Humphrey's double decker display (Guernseys and Berkshires) will be in place in the live stock section at Los Angeles again this year, under the care of that well known crack showman Lowry.

The Diamond Bar Ranch at Spadra, Los Angeles County, is now the best equipped swine breeding establishment on a large scale in the south end of the state. With 100 brood sows, many young litters and the 325 young Durocs of the spring litters, the big ranch presents one of the liveliest scenes of the day in pure bred live stock circles.

W. M. Carruthers, Like Oak, reports the sale of two Berkshire sows and a boar to Dr. C. E. Moulton of Yuba City. The sows were sired by Mayfield Superbus and the boar is a son of Mayfield Champion.

C. L. Hughes has just wound up a week of sales in which around 600 head of grade Holstein cows, heifers and calves were cashed for close to $65,000. During the week of September 23 to 29, Hughes, assisted by Col. Ben A. Rhoades of Los Angeles, made the following sales: Roeber Co., Maxwell. 100 head for approximately $13,000; Brookhollow Farm, Hollister, over 100 head for about $13,500; San Mateo Dairy Ranch Company, San Mateo, 225 head for upwards of $30,000; Yellow Bank Live Stock Company, Davenport. 110 head for approximately $13,500. In view of the fact that a large number of young things were included the prices obtained were considered highly satisfactory and indicate a keen demand for grade Holstein females. The cattle went to buyers from a wide territory.

George C. Kreutzer, superintendent of the Durham colony, purchased 56 grade Holstein cows in the Roeber sale. September 23. The cows will be distributed among the colonists.

SHORTHORN SALE AT SAN FRANCISCO

The Ormondale Ranch at Redwood City will enter six head of heifers and two head of bulls in the Shorthorn sale at San Francisco on Thursday, November 6. The quality of these animals under the able hands of James McDonnell, the superintendent of the ranch, is assured.

H. L. & E. H. Murphy of Perkins have entered the three heifers which they were fitting for the Sacramento fair and which owing to the illness of E. H. Murphy they were unable to show.

Two choice heifers will be consigned by the Pacheco Cattle Company of Hollister.

The beef cattle exhibit at the live stock show promises to be excellent both from the standpoint of number and quality.

EL DORADO COUNTY FAIR

El Dorado County will hold an agricultural fair October 23-24 at Placerville. L. J. Anderson, district club leader, writes: "This is the first attempt of the agricultural club and farm bureau to put over a community fair and we hope to make it quite a success. We will show in the largest building in town a variety of exhibits produced by the agricultural club members, such as registered Durocs, sheep, goats, poultry, potatoes, corn, rabbits, also domestic science and manual training exhibits. Besides this the forest service and horticultural commission will have extensive displays and there will be a number of commercial concessions of a high type."

CONTRA COSTA COW TESTING

The report of the Contra Costa Cow Testing Association for September shows 11 animals producing more than 40 pounds fat. The highest record is held by a pure bred Holstein owned by Bock Bros. of Pacheco. This cow produced 65.70 pounds fat from 2.190 pounds milk testing three per cent. The second highest producer was a grade Durham belonging to M. W. Hotchkiss of Knightson, 51.90 pounds fat from 1,212 pounds milk testing 4.2 per cent. Mr. Hotchkiss had three animals on the honor roll; Bock Bros., two; J. M. Christen, Pacheco, three; E. H. Fox, Oakley, three.

The Highest Priced SIRE and SON

KING KORNDYKE PONTIAC 20th

and HIS SON

KARLRAY PONTIAC TOLA

King Korndyke Pontiac 20th, our junior herd sire, at $6500, is the highest priced Holstein bull ever sold at public sale in California.

Karlray Pontiac Tola, a three months old son of King Korndyke Pontiac 20th, and the great heifer K. P. Tola Joe, has been sold by Gotshall and Magruder, Ripon, to A. B. Spooner, San Luis Obispo, at a price never exceeded in California for a bull calf at private sale.

In these instances price is a true measure of quality.
Why not put a son of this sire at the head of your herd?

OUR ENTIRE HERD IS TUBERCULIN TESTED

THE FRESNO FAIR

Continued from Page 483

the first junior yearling and grand champion boar in Freddy You'll Do, while J. P. Mallory, Fresno, had the junior champion boar in California Trailfinder. Thorpe had both the grand champion and junior champion sows in Delight of Mossdale and Reggie's Twilight of Mossdale.

Exhibitors: C. G. McClure, Fresno; J. A. Mallory, Fresno; E. Borges, Fresno; Joe N. Chinowth, Visalia; Fulgham & Sons, Visalia; R. E. Clifford, Strathmore; M. Cross, Raisin City; S. K., Kelsey Ceres; Ellis & Ellis, Tulare.

Aged boar—1, Chinowth on Joe's Orion, Cherry King 5th; 2, Fulgham on Col. Chief.

Senior yearling boar—1, Chinowth on Lord's Orion Cherry King; 2, Kelsley on Orion Good Enuff 3rd.

Junior yearling boar—1, Thorpe on Freddy You'll Do; 2, Ellis on Highland Good Enuff; 3, McClune on Max's Model.

Senior boar Pig—1, Mallory on California Trailfinder; 2, Chinowth on Al's Orion King.

Junior boar pig—Thorpe 1-3, on Regulator You'll Do Again and You'll Do Prince; 2, Fulgham on Royal Critics Pathfinder 1st.

Aged sow—1-2, Thorpe on Delight of Mossdale and Happy Lass of Mossdale; 3, Mallory on Imperial Angiola 2nd.

Junior yearling sow—1, Thorpe on Miss You'll Do; 2, Walker on Pioneer Queen 3rd; 3, Mallory on Col's Best Good Enuff.

Senior sow pig—1, Thorpe on Reggie's Twilight of Mossdale; 2, Cross on Red Velvet.

Junior sow pig—1, Thorpe on Reggie's You'll Do; 2, Chinowth on Joe's Orion Lady; 3, Clifford on Lady Uneeda Col.

Aged herd—1, Thorpe.

Young herd—1, Thorpe; 2, Clifford; 3, Chinowth.

Get of sire—1, Thorpe; 2, Clifford; 3, Chinowth.

Grand champion boar — Thorpe on Freddy You'll Do.

Junior Champion boar—Mallory on California Trailfinder.

Grand champion sow—Thorpe on Delight of Mossdale.

Junior champion sow—Thorpe on Reggie's Twilight of Mossdale.

Sow and litter—1 and 2, Mallory.

In the Duroc Jersey futurity for litter of four pigs the following awards were made: 1, Clifford; 2, Chinowth; 3, Fulgham; 4, Chinowth.

Junior boar pig—1, Fulgham; 2, Chinowth; 3, Clifford; 4 and 5, Chinowth.

Junior sow pig—1, Chinowth; 2 and 3, Clifford; 4 and 5 Fulgham.

Chester Whites

Foster Bros., Fresno, were the only exhibitors and were awarded all prizes in the classes in which they had entries.

J. L. Thatcher of Sacramento judged all breeds of swine in a manner entirely satisfactory to both the breedors and the ring side.

MARSH-McCRACKEN POLANDS AEVRAGE $160

The Marsh and McCracken sale of Poland-Chinas was held in Modesto October 4. Fifty-six bred sows and gilts and four young boars were sold for a total of $9,560, making the very satisfactory average of $160. The top of the sale went to Lendorris Ranch, owned by W. L. Haag & Son, Hanford, in the sow Ripon's Pomona Girl, bred to King's Big Bone Leader, at $420.

John M. Bernstein, Hanford, secured an outstanding gilt by Kansas King, bred to King Jones Over, for $315.

Geo. V. Beckman & Sons, Lodi, secured Long Wonder Girl, bred to King's Big Bone Leader, for $340. M. Bassett, Hanford, secured one of the real outstanding sows of the sale for $340.

A number of weaned pigs were sold for from $20 to $50. On Friday evening Marsh and McCracken tendered the Poland-China breeders of the state a banquet, to which the farmers and bankers were invited. Wm. Bernstein, Hanford, president of the State Poland-China Breeders' Association, presided, and the principal speaker was H. C. Carr, banker, of Porterville, who spoke on the relations of the banker and farmer, especially regarding live stock. He laid special stress on the value of the boys' pig club movement.

Geo. W. Bell of Tulare was the auctioneer, assisted in the ring by Ord L. Leachman and Cy Clark.

Following is detailed report of the sale:

Marsh Consignment.

1, Langhorst Bros, Lodi, $250.
2, J. F. McSwain, Merced, $155.
2½, C. J. Colburn, Turlock, $105.

12, C. J. Kelleran, Modesto, $85.
13, L. McCracken, $155.
14, Luther Thompson, Modesto, $115.
15, Arnold Hattam, Bakersfield, $160.
16, C. M. Stetson, Keys, $160.
17, J. Y. Peterson, $100.
18, W. A. Harr, Haywards, $125.
19, A. A. Plagge, Oroville, $75.
20, Ruth Hammond, Modesto, $85.
21a, A. J. Elliott, Tulare, $220.
22a, A. J. Elliott, $285.
22b, J. Y. Peterson, $140.
23a, Haag & Son, Hanford, $320.
24a, John M. Bernstein, Hanford, $315.

McCracken Consignment.

21, Haag & Son, $420.
22, R. F. Guerin, Visalia, $230.
23, Geo. V. Beckman & Sons, Lodi, $340.
24, Frazier Bros., Ripon, $165.
25, F. C. Dollard, Ripon, $135.
26, A. A. Plagge, Oroville, $80.
27, W. H. Brower, Angels Camp, $85.
28, Haag & Son, $200.
29, J. Y. Peterson, $150.
30, F. C. Dollard, $100
31, J. Y. Peterson, $140.
32, Frank Dolly, Ripon, $100.
33, J. Y. Peterson, $150.
34, G. F. Storm, Lodi, $170.
35, J. F. McSwain, Merced, $150.
36, John M. Bernstein, Hanford, $170.
36a, California Twine Co., Escalon, $95.
37, J. Y. Peterson, $175.
38, S. J. Boone, $160.
39, H. C. Shinn, Tulare, $175.
39½, J. Y. Peterson, $150.
40, Eugene Miner, Lodi, $100.
41, Frank McVey, Turlock, $80.
42, J. Y. Peterson, $135.
42½, J. Y. Peterson, $150.
43, Loyd & Tointon, Santa Rosa, $120.
44, J. Y. Peterson, $150.
45, J. Y. Peterson, $130.
46, H. J. Kimball, $125.
47, J. Y. Peterson, $95.
48a, M. Bassett, Hanford, $340.
49a, J. F. McSwain, $135.

Maricopa County, Arizona, has entered into an agreement with the builders of a dam across the Gila River, near Gila Bend, to permit building a bridge across the structure. This will furnish a direct connection between Phoenix and the rapidly growing mining town of Ajo.

BERKELEY, CALIF.

SHOWED THE VALUE OF TESTING

One of the most interesting, and at the same time instructive, exhibits at the state fair was the demonstration staged by the Sacramento and Yolo Cow Testing Association. Three cows were used, and above them was a sign inviting the public to pick the high and low producers. One cow had a record of 623 pounds fat, one produced 561 pounds and the third produced 231 pounds fat. To the average dairyman there was little to indicate the producing ability of the three cows, and it was just that fact that drove home to the dairyman the folly of neglecting to tests his own cows in order to weed out the boarders.

This association, which is one of the most active in the state. is doing very effective work. Last December when the new board of directors took charge there were 700 cows in the association and only two per cent were on the honor roll. At present 2300 cows are being tested and there have been months when 20 per cent were in the honor list.

Indicating the value the association is rendering the members, R. E. Watson and A. E. Greene, directors, told of one member whose herd stood near the bottom during the spring months. This same herd is now well up toward the top, the owner declaring that he "could not afford to have his herd at the bottom." He put into practice better methods of feeding and management, weeded out his unprofitable cows, as shown by the test, and has increased his net profits $200 per month.

Members have become interested in better methods, and the sale of purebred bulls has developed notably.

The association inaugurated a contest to last throughout the year and several thousand dollars worth of prizes were secured. Part of the exhibit at the state fair consisted of a large case of cups being offered in the contest.

ELBERG SALE A SHORTHORN OPPORTUNITY

With only a few days left before the notable sale of Shorthorns to be held at Roselawn Farm, Woodland, there is still time for breeders throughout the state who are interested in this breed to make their plans to attend the sale. It is a foregone conclusion that the vendue in question will be accorded wide patronage owing to the established reputation of the Roselawn herd and its owner, H. M. Elberg. Few sales have been held in the West that have offered as much attractive breeding material, and the sale should provide a splendid opportunity for breeders and beginners to make selections that will strengthen their herds. The sale will include many of the cows that have been among the best producers in the herd, and will also include an exceptional lot of heifers. Only a few bulls will be sold, but those listed, including the good herd bull, Crescent Dale, are of a quality that will please buyers who are demanding a better class of bulls than formerly.

The sale is expected to mean much to the development of the pure bred beef cattle industry in this state. The time is at hand when cattlemen must look to the pure bred bull to cheapen their production casts, and when once the possibilities along this line are more generally recognized there will develop a demand that will necessitate the establishment of many more breeding herds.

DISPERSAL SALE

George A. Smith of Corcoran writes regarding his dispersal sale of Holstein-Friesians as follows:

"This is a complete dispersal sale of my milking herd of young registered Holstein-Friesian cows. We are keeping only their calves. They are all tuberculin tested. Sixty-three of them are now on year's semi-official test and doing good work. Several have finished their year's test and made good records. They are all Eastern bred cows which we purchased from pure bred herds in New York, Ohio, Michigan and Wisconsin. We bought them as calves and yearlings and have grown them out and these are the cream of our purchases."

HEREFORD BREEDERS TO HOLD SALE

Secretary John A. Bunting of the Pacific Coast Hereford Breeders' Association writes that the sale to be held November 7 at the San Francisco Livestock Show promises to bring out the best lot of cattle ever offered by members of that organization. The sale will consist of about 35 head and will include only a few bulls. The selection of the offering was placed in the hands of Alec McDonald of the university farm and he was instructed to pick only individuals of exceptional merit as it is the hope of the association that the sale will induce a number of men to take up the breeding of Herefords. The sale is to be managed by C. L. Hughes of the California Sales and Pedigree Company, Sacramento.

AN ENVIABLE RECORD

Within 30 days the firm of Rhoades and Rhoades of Los Angeles has conducted sales of dairy cattle in 14 different counties in California. Their sales have extended from the Mexican line in San Diego County to Maxwell in Colusa County. Among the counties in which they sold were Orange, San Diego, Los Angeles, Ventura, San Benito, San Mateo, Yolo, Colusa, Sacramento, San Joaquin, Kings, San Bernardino and Imperial.

Col. Rhoades stated that the demand for dairy cattle in these various sections of the state was excellent and it was no trouble to get $200 or better for a good cow. In fact the herd of L. Lothras on October 2 averaged $209 per head, with the high cow selling at $305.

CATTLEMEN'S CONVENTION IN NOVEMBER

The California Cattlemen's Association will hold a meeting in San Francisco November 5-7, the week of the Livestock Show. The meeting will be largely given over to a discussion of the proposed regulatory legislation now before congress.

Among the prominent men who are expected to appear on the program are; T. W. Tomilson, secretary of the American National Livestock Association; Frank W. Tomson, editor of The Shorthorn in America; R. W. Kinzer, secretary of the American Hereford Breeders' Association; O. M. Plummer, manager of the Pacific International Livestock Exposition, and H. A. Jastro, chairman of the marketing committee of the state association.

WAYS IN WHICH HOG CHOLERA MAY SPREAD

The germ of hog cholera may be carried to healthy herds in many ways. The most common way in which cholera is spread is direct contact between sick animals and well ones, or direct contact through yards, pens, cars, food or other material which has been contaminated by sick hogs. Around cities cholera is often spread through the feeding of scraps or swill. Small irrigating ditches passing through infected farms may also carry the infection to herds lower down. Crows, buzzards and other carrion-eating animals may be responsible for the spread of hog cholera. Direct sunlight kills the virus of hog cholera quite promptly, but it is possible that it may retain its disease-producing powers for a considerable time in the soil in moist, sheltered localities, especially during cool weather. James P. Jacks, veterinarian, bureau of animal industry and University of Arizona.

In the James Jeffries Holstein show herd at the Los Angeles Livestock Show may be seen the noted sire King Segis Pontiac Jannek and a few of his get. Jeffries will show from his Burbank ranch the 9-year-old cow, Gerben of Maple Lane 2d; also her daughter, granddaughter and great granddaughter. In her younger days this cow made better than a 25-pound record, and she is capable of better than 30 pounds today.

Nearly two inches of rain fell in Phoenix September 27 and 28. Rain was quite general over the state and adds to the water supply of the range country and will also help the fall feed very materially.

Mossdale Farm

JERSEY CATTLE DUROC-JERSEY SWINE

We believe that the test of a sire lies in his ability to sire uniform, prize winning offspring, and we are proud of the record of Mossdale sires.

Jerseys---

Our herd bull, JOLLY SENATOR RALEIGH, was never defeated in class as a yearling or as a two-year-old and this year he was grand champion, as a three-year-old, at the California State Fair, the Kings County Fair and the Fresno Fair. And at each of those shows his get won the get of sire class.

Duroc-Jerseys---

The record of Mossdale Durocs at recent fairs is proof of their merit. Freddy You'll Do, our herd boar, sired the winning get of sire group at the above fairs.

We can furnish young things of either breed at prices that are attractive. Write us your wants.

See Mossdale Exhibits at Los Angeles and San Francisco

Beef Feeding in the Salt River Valley

The following feeding practice is from a report of County Agent H. C. Heard of Maricopa County, Arizona, and is based upon an interview with E. C. Cavness, manager of the Burnt Ranch on the Phoenix-Glendale road where extensive beef fattening operations have been carried on for the past few years.

Mr. Heard says: "The Salt River Valley plant of the Burnt Ranch is maintained as a sort of safety valve for the ranch, at the head of Lime creek some 65 miles north of Phoenix where 4,000 head of cattle are run by Cavness Bros. While baby beef has been fed out mostly so far, it is not necessarily the intent to keep up this practice. For the last two years range feed has been short and the calves have been rather thin. For this reason all of the steer calves and cull heifers have been finished in the Salt River Valley plant. Mr. Cavness culls his own cows very closely and at present has his range so well cleaned of old cows that those he discards each year are still profitable as feeders and do not have to be dumped on the canner market.

"Mr. Cavness has fed out about 1,200 calves in each of the last two winters. The average age of the beginning of the feeding period is about six months, with the extremes running from five to eight months. When brought in, calves will probably average slightly under 400 pounds and are fed for a period of about 150 to 160 days, in which time the average gain is close to two pounds per day. These calves begin on a ration of all of the ensilage they will eat and all of the chopped alfalfa they care for, supplemented by one pound of cottonseed meal and one pound of ground barley and milo. About each week the grain is increased three-fourths of a pound until a total of around eight pounds per day per head is fed. The meal is increased gradually to about two pounds per day.

"Last winter the old cows were fed about twenty-five pounds of cotton seed hulls per day supplemented by one pound of ground grain and a pound of cottonseed meal, with two or three pounds of chopped hay fed once daily. The meal and grain were increased gradually to about four and one-half pounds of each. It is likely that this year's feeding operations on the Salt River Valley plant will be confined mostly to yearlings and old cows, since the range is very good and most of the cows will probably come through the summer in good shape for the calves to run with during the winter.

"Mr. Cavness is a firm believer in ensilage and also in variety in rations. His project has been carried through in the Salt River Valley in the face of the opinion of a number of people, that range stock will not make satisfactory gains on concentrated feeds. He has found at times some little difficulty in starting a good rate of gain on calves which have been starved on the range, but has made a success of feeding even these animals."

Agricultural College Plans Big Year of Testing

With 16 Holstein herds carrying official tests in September, besides the regular semi-official tests in all the dairy breeds, the testing season of 1919-20 has commenced with such a rush that farm authorities forecast the greatest year of record making that California has even seen. High prices for breeding stock from tested herds, the return of settled conditions, and the rapid growth of California pure-bred dairy interests are putting breeding more and more on the solid base of production.

During the year ending August 1, 1918, official testing in California was greatly handicapped by the unsettled labor conditions on dairy farms and especially by the scarcity of trained men for supervisors of official tests. Nevertheless, during this past year 354 semi-official or two day tests, and 233 official tests have been carried on in 104 pure bred dairy herds in California. Of these 65 were Holsteins, 22 Jersey, 12 Guernsey, two Ayrshire, and one Milking Shorthorn. One herd was composed of both Guernseys and and Holsteins, and another of Guernseys, Holsteins, Ayrshires and Jerseys. There seemed to be a marked tendency towards longer time tests, 93 of the 233 official tests running for 30 days or longer. The lead given to long time records by the establishment of the first strictly official record of more than 1000 pounds of fat here in California is being strengthened, and many animals completing seven day tests are also being tested for yearly production on semi-official tests.

For the oncoming season of extensive testing the college of agriculture of the University of California declares itself in an excellent position to supply its force of trained accurate supervisors for these tests. To the ranks of its old men in this work it is adding veterans of the great war who have shown exceptional ability in this activity.

To overcome the handicaps from war service 145 soldiers were sent early in June to the University Farm at Davis to be trained in different fields of agriculture. Those who preferred dairying were put through a systematic course for three months. The men who did especially well in the work with the Babcock test were given further training and practical experience in carrying herd tests in the University Dairy herd. It is stated that their work thus far indicates that they will make very capable, accurate supervisors. Official testing offers them a living for the present and an excellent chance for further observation and study in California dairy herds before starting out for themselves or as herdsmen for others.

The small breeder, it is said, who plans to commence semi-official testing, can cheapen considerably the cost to himself in several ways. In California a flat rate is charged for these two day tests. The supervisor may test up to 10 cows per day, when milked three times a day, and 15 cows may be secured through the year at no greater cost than that of a single animal. In certain counties having cow testing association testers whose work is known to be accurate and reliable by the University, the tester is permitted to carry on semi-official testing for not to exceed three months in succession in any herd. Of course, he must carry out strictly all of the rules as laid down by the breed associations. The cost of such supervision is then a matter of arrangement between the cow testing association and the owner.

Semi-official testing at this time is said to be of special interest to all Jersey breeders as the American Jersey Cattle Club on July 1 commenced a great after the war revival of testing with its slogan "10,000 Jerseys on Test." California's quota for the campaign was set at 200 head. During July 107 head were tested, a record of 54 per cent of the assigned quota for the first month. This was surpassed in per cent only by six other states. During August 115 cows were tested, indicating that the assigned number most likely will be reached in California before the end of the contest, July 30, 1920.

The office of the official dairy tests was moved to the University Farm, Davis, on September 1, with Paul I. Dougherty in charge of advanced registry, succeeding Miss Cora J. Hill, resigned. Mr. Dougherty was formerly farm adviser in Imperial County. Applications for tests, addressed to Animal Husbandry Division, Davis, California, by letter, telegraph or phone, will receive prompt and careful attention.

UNUSUAL RECORDS BY GRADE DAIRY COWS

L. B. Gale, cow tester, reports that during the month of August three grade cows owned by Peter Hansen of Ingomar, Merced County, made the following records: A grade Shorthorn produced 1,839 pounds milk containing 95.62 pounds fat; a grade Holstein, 1,962 pounds milk and 90.25 pounds fat and another grade Holstein 1,845 pounds milk and 81.18 pounds fat.

Keep Them on the Job

You know the dangers of neglecting painful lameness, bruises and swellings. Put Sloan's Liniment on the job and let it relieve those poor dumb faithful beasts from suffering. Just apply a little *without rubbing*, for it *penetrates* and keeps the animals efficient.

For family use, too, Sloan's Liniment soon relieves *rheumatic twinges*, *lumbago*, *stiffness* and *soreness* of *joints* and *muscles*. A bottle around the house is a thoughtful provision for first aid emergency.

Six times as much in the large bottle as you get in the small size bottle. Bear in mind, Sloan's Liniment has been the World's Standard Liniment for thirty-eight years. 35c., 70c., $1.40.

It Is Profit You Want

If you can make as much gross return from ten high class Shorthorn cows as from thirty ordinary cows, and you can, you had better begin putting in the high class cows, for your net returns will be much greater. It costs something to keep the herd now. You want the kind that will make a profit above this cost. It pays to grow good Shorthorns.

A Kansas man produced 97 head from one cow in twelve years; a Wisconsin firm, 120 head in less than fifteen years, all pure breeds.

Beef Cattle Specialist

For 30 years I have been devoting my entire time to pure bred beef cattle. I know the kind of cattle California needs and where and how to buy. I make regular trips to the great producing centers and will buy on order. Best of references. Satisfaction assured. Correspondence invited.

R. M. DUNLAP, Hotel Land. Sacramento, Cal.

A wool pool is being formed in Butte County.

In the report just issued it is stated that three years ago Hansen was milking over 35 cows. He joined the cow testing association and began a systematic culling, and during the three years he has bought and sold over 100 cows in developing his herd. He now has 15 such cows, which he milks himself, and is getting more butter fat from 12 of these than he did from the 35 original cows.

BUY FEEDS UNDER NEW PURE FEED LAW

Buyers of mixed feeds should bear in mind that the pure feed law passed by the last legislature will go into effect November 1, 1919, and they should govern their buying accordingly. A number of the leading manufacturers have already placed their products on the new basis and buyers will do well to seek out those brands that are sold according to the requirements of the new law. Increasing feed costs make it imperative that consumers of mixed feeds get full value for their money, and for the benefit of our readers who may not be familiar with the new law we print herewith the more salient features of the law.

Section 1. The term "commercial feeding stuffs" shall be held to include all feeding stuffs used for feeding live stock and poultry, except the following:

(a) Whole seeds or grains.

(b) The unmixed meals made directly from and consisting of the entire grains of corn, wheat, rye, barley, oats, buckwheat, flaxseed, kafir, milo and light rice; provided that light rice shall be labeled "light rice" when ground.

(c) Whole hays, straws, cottonseed hulls and corn stover, when unmixed with other materials.

(d) All other materials containing sixty per centum or more of water.

Section 2. The standards for commercial feeding stuffs shall be the latest revision of the definitions of feeding stuffs adopted by the association of feed control officials of the United States.

Section 3. Every lot or parcel of commercial feeding stuffs sold, offered or exposed for sale or distributed within this state shall have affixed thereto a tag or label, in a conspicious place on the outside thereof, containing a legible and plainly printed statement in the English language, clearly and truly certifying:

(a) The net weight of the content of the package, lot or parcel;

(b) The name, brand or trade mark;

(c) The name and principal address of the manufacturer or person responsible for placing the commodity on the market;

(d) The minimum per centum of crude protein;

(e) The minimum per centum of crude fat;

(f) The maximum per centum of crude fiber;

(g) The maximum per centum of ash;

(h) The specific name of each ingredient used in its manufacture.

(i) The per centumn of such ingredients as corn cobs, corn bran, oat hulls, barley hulls, rice hulls, ground light rice, alfalfa meal or similar materials, when such constitute a portion of the package, lot or parcel.

(j) In the case of poultry feeds, the per centum of grit or mineral matter they contain.

Copies of the complete text can be secured from the Great Western Milling Company, Los Angeles, one of the first firms to comply with the new law.

The man who raises breeding stock for the purebred market needs to postpone the castration of the pigs to a much later age than he who produces pork altogether. The older the pig the more accurately one can judge as to his future worth as a breeding animal. Those pigs that are to be porked should be castrated when five or six weeks old, as animals at this age recover from the operation much more rapidly than more mature ones. Within reasonable limits the earlier this work is done the less trouble one will have. In performing the operation be sure that the incision is low enough to permit proper drainage. Disinfect thoroughly after castration with bichloride of mercury or one of the coal tar preparations and see that the pig's sleeping quarters are sanitary with clean dry bedding.—Duroc Bulletin.

RU-BER-OID and MALTHOID READY ROOFINGS

Are made to last

Most ready roofings *look* the same but they vary greatly in quality. The actual test of service must be made before you can tell the difference between good and poor ready roofing.

Ru-ber-oid and Malthoid have proved their merits under every condition. They have stood the test of time and weather because the finest quality is built into them.

In their manufacture, only long-fibred, tough felt is used. This felt, which is made in the company's own plant, is saturated with asphaltum of just the right consistency to preserve the fibres. Then the whole is coated with a special weather-resisting compound. Ru-ber-oid and Malthoid, the finished products, have an exceptionally long life, are fire-resistant and will not dry out or rot.

Standing back of Ru-ber-oid and Malthoid quality is the great organization of The Paraffine Companies, Inc. Every process of manufacture, from the gathering of the rags for the felt to the turning out of the finished roofing, is carried on within the one organization. This fact, and constant supervision by experts, make it certain that the quality of Ru-ber-oid and Malthoid is always maintained.

It is this careful choice of materials and precision of manufacture which have made Ru-ber-oid and Malthoid the recognized standards of ready roofing.

What Mountain Fires Mean to the Rancher

AS he has orchard properties whose value depends upon irrigation waters flowing from the Sierra Madre mountains, in which the recent fires occurred, Martin Fesler of Covina felt that his interests called for an investigation after the fires had passed. He visited the mountains and tells of his experiences—observations, rather, of conditions—in the fire swept area. He writes in the Covina Argus:

Mary Jane was born the year of the big flood, and the bull pup was three days old when the fire broke out in the San Gabriel canyon. That is about all these great calamities mean to many people unless they lost a summer cottage or had a corner of their ranch washed away.

If you could see the thick, silty ooze that is coming down the streams just now, sealing up the ground and hastening the flow of water to where it is not wanted, it might tell you a story of floods and dry streams next summer, but possibly it will take a few seasons to bring that fact home to each one of us.

Eighty thousand acres were burned over in the San Gabriel watershed. Much of this was so densely grown over with sage brush that you could crawl over it. Underneath was the accumulation of leaf mold and brush that acted as a great sponge to hold back the rains and force them into the ground. After the fire had destroyed all this, you could hear the rumblings of the rock and earth as it slid down into the gullies.

About four years ago a canyon was burned over just south of the Alpine Tavern. Just take a look at it when you are going that way and it will tell you what our watershed will be like during the next 15 or 20 years.

The time to fight a fire is about six months before it breaks out, or, better, through a series of years in a well planned set of firebreaks.

If I have ever thought for a minute that it was no part of my business to contribute to the San Dimas firebreaks, because I get my water out of another canyon, I will have a lifetime to regret that short-sighted policy. We may think we are too old to go out to fight a fire, but we are not too old to move when the floods come.

When the silt begins to fill up the harbor and these washes become the crest of the country, and the channel takes another course, it is then that we will realize that we are vitally interested in the entire watershed as a whole, and not just our particular narrow canyon where we get our individual supply. Long Beach and all the intervening country, and especially Covina, is interested in the San Dimas territory, for it feeds the San Dimas wash, and if any considerable amount of water comes down, it could easily take a new course down through some of the most valuable groves in the country.

The thing to do is to get busy now and prepare for this. Up in San Dimas canyon is a proposed dam. There are about a half dozen men and an old horse working where there should be a thousand men at work. With any sort of speed a part of this dam might have been completed and utilized to hold back the water, and possibly save millions of dollars' worth of property.

Other projects could be started in other places to save this water that used to be held back by the vegetation that is now gone. Out of this fire may come greater and better things, but until something is done I shudder to think of what could and may happen. The funds are available for this work in San Dimas canyon and it should be the business of every taxpayer to make all the noise he possibly can to awaken our officials to the needs of the hour.

It is too late to crab about what ought to have been done before it all happened. The thing to do now is to get busy and remedy the loss as speedily as possible.

Beans

Regarding the bean marketing situation, President George A. Turner of the California Bean Growers' Association issues the following statement.

To thoroughly understand the position of the bean grower one must consider the situation from a statistical standpoint:

Year	U. S. Crop Bushels	Hold-over	Total Available
1917....	14,967,000	3,000,000	17,967,000
1918....	19,506,000	4,824,000	24,330,000
1919....	10,630,000	6,000,000	16,630 000

The best information available from the Orient is to the effect that the food shortage in the past year, particularly of rice, the Orientals' principal article of food, was such that much of the acreage that was formerly planted to beans will this year be planted to rice. Consequently not more than one-half of last year's crop of beans will be produced this year.

No large stocks are held by the wholesalers throughout the country and all indications point to a steady demand for the product. The old system of operation was for the speculative buyer at harvest time to depress the market by every possible means so that the farmers who must sell at least a part of their crop to meet urgent financial requirements would be compelled to sell at whatever price was offered. Once the crop was out of their hands it did them no good to see prices advance.

With a desire to prevent just this condition the California Bean Growers' Association is now so financed that as soon as the growers' beans are delivered a payment is made of approximately one-half their value. This will avoid the marketing of a large lot of beans on the market controlled by speculators and will permit of the marketing of the product according to the demands of the trade.

At the present moment every possible effort is being made to pull the market down, and this is having its effect. The speculator is getting quite a few beans. If a farmer is willing to sell his beans at less than cost you can't blame anyone for taking them away from him, but the true situation does not warrant the bean grower selling his beans at prices that do not cover cost plus a reasonable profit. Beans sold on this basis are by far the cheapest food obtainable and there is no reason on earth why the grower should sell below the cost of production.

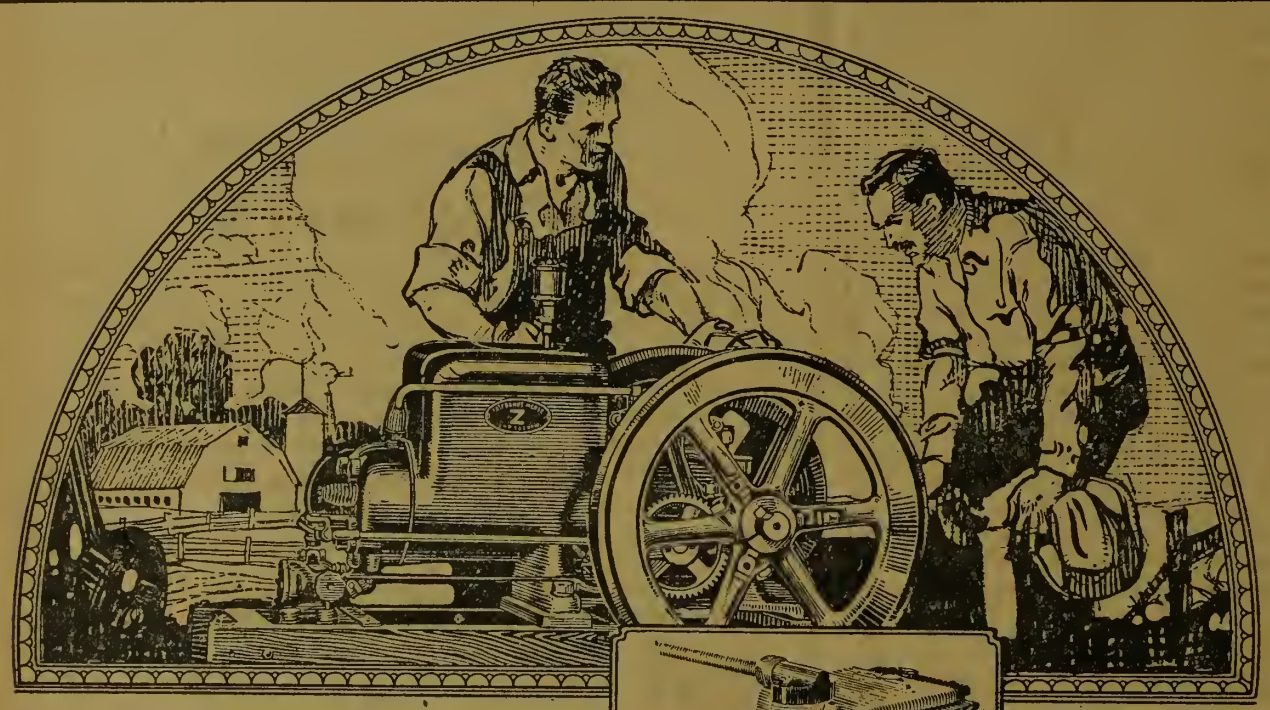
The carry-over from last year, considering the crop, is not excessive throughout the United States. It is about 1,824,000 bushels more than the carry-over of 1917, and from reports at hand the present crop is 8,876,000 bushels less. Thus we go to market with 1,700,000 bushels less to sell than was actually sold last season.

Of the carry-over quite a lot of beans were off grade. This fact causes the California growers more concern than is warranted. All other bean producing sections are frequently confronted with this condition and there is a wide market for beans of low grade. Of course there is a differential in the price, but not nearly so great as the grower is lead to believe. In the past two weeks large sales of off-grade beans have been marketed by the association in addition to sales of beans of better grade.

All informed bean men look for a steady market at fair prices, and the new crop is coming in of such excellent quality that it can and will hold its own with beans of any section.

Claims have been made that beans are no longer popular as an article of food. These claims are silly in view of the fact that 5,207,000 more bushels of beans were consumed in 1918 than in 1917 in spite of the fact that an order of "pork and" is billed at from two to six times what the restaurants formerly charged.

My advice to the bean grower is to demand cost plus a fair profit for his product. He is entitled to it and can obtain it. I do not wish to convey the idea that he can obtain anything he demands. He must always keep in mind that beans are essentially a poor man's food and must always be relatively cheap.



Fairbanks-Morse "Z" Engine with Bosch Magneto

Farm Engine Supremacy

THE famous "Z" Engine and the Bosch high tension, oscillating magneto combine to make the one SUPREME farm engine. ¶ The dependability of the Bosch in delivering a steady succession of hot, intensive sparks is well known and adds the one possible betterment to the "Z"—always recognized as America's foremost farm engine. ¶ Call on your "Z" Engine dealer and see the result of this newest combination—FAIRBANKS-MORSE "Z" WITH BOSCH MAGNETO. ¶ Over 200 Bosch Service Stations assist our dealers in delivering maximum engine service. ¶ Prices—1½ H. Questions and Answers

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Rhubarb Between Rows

I want to plant quite a lot of rhubarb this fall. I must plant it in my young orchard. Trees are 20 feet apart each way. Can I plant two rows between the trees? How deep and how wide should the trench be? If I get a few loads of rather fresh horse manure mixed with straw can I rot it and make it ready for use in a few weeks by soaking it every two days? I want to raise rhubarb for local market and get it ready as early as possible. Please give me advice on making the trenches and planting.—Truck Gardener, Concord.

The distance apart for the rows is usually five feet, plants one and one-half feet in the row. This requires 5,800 plants per acre. Plant any time when the young plants may be secured from September to May. The close planting recommended gives longer stems which are inclined to be more tender than when a greater distance is allowed. By throwing out a trench as deeply as possible with a plow and throwing in a quantity of well rotted stable manure, then cultivating this into the soil, there will be sufficient trench left for the planting. Poultry manure, dried blood or other fertilizer rich in nitrogen gives a product of fine quality. If fertilized as above recommended there should be no question that with sufficient water this crop could be grown successfully and still not injure young orchard trees. During the heat of the summer decomposition is very rapid and by keeping reasonably moist at that time and forking over to prevent its burning it will sufficiently decay in a few weeks so that there will be no weed seed capable of starting. The forking over, however, is necessary to prevent burning. Care must be used not to drown out with too much water or decomposition will be stopped and the most available of the plant food leached away. The best results with fresh manure are secured where it is placed directly underneath the surface of the soil. That will not answer, however, for rhubarb.

Common Nightshade

Can you please tell me the name of the enclosed leaf and berry? In Canada it is called the garden huckleberry and it is used in making pies. It looks so very much like nightshade that I would like to be quite sure the berries are edible.—Subscriber, Sierra Madre.

The leaves and berries you send are of the common nightshade. The berries are not poisonous. No species in California bear poisonous berries, but we have heard of children being ill from eating the green berries. This would probably happen if they ate green tomatoes, which belong to the same family.

Pollenize Mammoth Blackberry

Please tell me in your question and answer column what other kind of blackberry to plant with the Mammoth blackberry to pollenize it. I have a Mammoth blackberry vine and it never bears fruit. What is the trouble?—Subscriber, Rail Road Flat.

Pollinate your Mammoth blackberry by planting the Loganberry beside it as the Mammoth is self-sterile. —J. W. M.

How many know that something like half a million cats were employed in the war as "gas detectors"? No creature, from the least to the greatest, who could help win the war was spared; and, from the least to the greatest, there was nothing more that each could give than his life.

"It's the Easiest and Best Way"

"Now I'll show you how to start this little job of tree planting with dynamite: First we sink the hole with a 2-inch dirt auger. Put it down straight, and if you strike hardpan use a churn drill and set your charge in the hardpan, not above or below it. If you strike the hole *right* the charge will break up the earth all around and give the young tree roots a chance to spread. That's what makes 'em grow so fast and bear so early when they're planted with

HERCULES DYNAMITE

There's one thing to remember tho'—you mustn't blast for planting when the ground's too *wet*. It's like anything else in farming—you get the best results when you work under the best conditions."

"It certainly *is* the easiest and best way to plant trees and the Hercules Powder Co.'s 68 page book for farmers, "Progressive Cultivation" will give you exact instructions about the use of dynamite for farm work. They'll send it *free* to any farmer or orchardist who will sign the coupon."

Some Cures for Roup

By Jean A. Koethen

IT WAS the veteran poultryman and writer, J. H. Robinson who said, "As long as you cure roup you will continue to have roup in your flock," meaning that the bird which has once had roup is likely to retain a tendency to the disease in its system and to pass this tendency on to its offspring. As it is not always easy for the novice, however, to distinguish between a common cold, called noncontagious catarrh, and roup, some of the more common and simple treatments for the disease may be useful just now as we are entering on the season when respiratory diseases of all kinds are prevalent.

First, as to the symptoms of roup: Watery eyes, discharge of mucus from the nostrils, swollen or inflamed eyes, swellings below the eyes, either or all accompanied by lassitude, weakness, loss of appetite, roughened plumage or fever, may accompany an attack of roup, but the one certain symptom, so far as I know, which distinguishes roup from an ordinary cold, is a peculiarly heavy and offensive odor. All authorities agree on this. Whether or not the odor has been exactly described to you you will recognize it when you meet it, for there is nothing like it, and when you detect it on your nightly round of the laying house you may know roup is in the flock. It may be the affected bird will not appear very sick; she may keep her red comb and her appetitie, and the only sign of illness may be a thickish discharge from the nostril. Nevertheless if she carries this odor with her she has roup and she may be a greater menace to the health of the flock than a bird that is apparently much more seriously affected, for she carries contagion wherever she goes. Such a bird should be removed from the flock at once and treated with one of the remedies given below. When she is cured band her with a colored band so that you may never make the fatal mistake of using her in the breeding pen. If roupy birds are kept only for laying no great harm is done, though they are apt to lack the vigor necessary to high production. It is when they are permitted to reproduce their roupy constitutions that trouble begins.

Use Simple Remedies

It is a great mistake to purchase expensive remedies for roup. The simple home remedies, such as would be used in first aid for the family before the doctor is called, are better and far cheaper than patent nostrums. Professor Dryden of the Oregon station recommends just three remedies for roup: peroxide of hydrogen, which is usually on the shelf of any family medicine closet; kerosene, which costs ten cents a quart and has a hundred uses, medicinal and domestic; and permanganate of potash, which is the base of some patent roup cures, and of which a nickel's worth is sufficient for treating a good-sized flock. The peroxide is used for washing out abcesses and swabbing the throat. The permanganate treatment has often been mentioned in this column. It consists of dropping a few permanganate crystals into a quart measure or lard pail of slightly warm water and dipping the head of the diseased bird in the pink colored liquid. Its object is to wash out the nasal passages thoroughly, and it should be repeated two or three times a day, a fresh solution being prepared each time until improvement is seen. When Professor Dryden uses kerosene he swabs the face and sprays the throat or nostrils as the case requires. Naturally he does not use more than one of these remedies at once.

North Carolina Treatment

Dr. B. F. Kaupp of the North Carolina station is one of the few M. D.'s who have been sufficientiy interested in poultry to write doctor books for them. Dr. Kaupp is a little more thorough in his treatment than Professor Dryden, but suggests that unless a bird is valuable it is better to kill than cure. He syringes out the nostrils and other affected places first with a 20 per cent solution of common baking soda, which dissolves the mucus. Next, to thoroughly cleanse the parts, he syringes with peroxide of hydrogen and water equal parts. After this a healing medicine is required, and he prepares the following, which is also injected: oil of thyme 30 drops, oil of eucalyptus 20 drops, menthol 10 grains, oil of petrol 2 ounces.

This, like the other liquids sprayed on inflamed mucus surfaces, is slightly warmed.

Government Remedies

Dr. D. E. Salmon of the United States department of agriculture is one of the recognized authorities on poultry diseases. He recommends any one of the following for dipping the heads of birds affected with roup: Boric acid, one ounce; water, one quart; permanganate of potash, one dram; water, one quart; boric acid, one and one-quarter ounces; borate of soda, one-half ounce; water, one quart; peroxide of hydrogen, one ounce; water, three ounces. When the inflammation has reached the eye he uses argyrol. One or two drops of a 15 per cent solution is introduced between the eyelids twice daily for several days.

"Before applying these remedies," he says, "it is well to wash the eyes and mouth with warm water containing one teaspoon of common salt to a quart, using a pledget of cotton and rubbing gently, at the same time pressing and massaging about the nostrils and under the eyes to loosen the accumulated secretion. If there is much swelling under the eyes it must be carefully opened with a sharp, clean knife, all the secretion removed, and the cavity washed with one of the above-mentioned solutions. A pledget of cotton moistened with the solution may be left in the opening for an hour or two or it may be dusted with iodoform powder. When the swelling under the eyes is not very large or hard it may often be reduced by massaging it in such a manner as to press the contents toward the nostril. After treating the birds in this manner the head should be well anointed with pure or camphorated vaseline."

A Simple Spray

Dr. N. W. Sanborn advises the use of an atomizer for applying disinfecting solutions to the mouth and nasal passages and recommends the following solution for a spray: Extract of witch hazel, 4 tablespoons; liquid carbolic acid, 3 drops; water, 2 tablespoons.

He applies the spray twice a day, squeezing the bulb five times for each nostril and twice for the mouth. He also recommends washing the cavities of the nose and throat with peroxide of hydrogen diluted one to three times with water.

Prevention the Main Thing

After reading the above prescriptions my readers will agree, I am sure, that prevention is far easier than cure. Roup, let it be remembered, is a disease of dampness and filth. Foul air, damp houses, drafts from behind the roosts are the main contributing causes which produce this very troublesome disease. If houses are clean, dry and well ventilated, without drafts and with plenty of sunshine, there will be very little roup in any flock. Drainage is also important. Put the poultry house in the highest available location so that water and damp air will settle away from it instead of into it. Hens are more susceptible to damp air than many persons realize. Chill winds should also be guarded against either by facing the house away from the prevailing winds or by windbreaks of some sort. It is the hen that is uncomfortable, chilled perhaps, when she goes out of her warm house into the morning air, annoyed by a draft on her head at night, forced to breathe air that is foul with the odor of droppings, that first succumbs to colds and roup.

Poultry Queries

Conducted by J. A. Koethen

Peas for Poultry Feed

I have been reading in a poultry book on the food value of the regular

table pea for poultry. It says that the pea contains more protein than corn or wheat. That being the case, could the pea be substituted for wheat or corn? In what form can peas be fed; in mash, whole or cracked, or both? And kindly inform me the proportions to use with other grains and in mash. I am going back on my ranch near Oakdale shortly and if peas are good for poultry I may plant about five acres this winter.—Subscriber, Oakland.

Professor Dryden says peas could be used for poultry wherever they can be raised cheaply and easily. They should be ground into meal and incorporated into the dry mash, and may be made as much as ten per cent of the whole by weight, but you will probably have to begin with less if the hens are not accustomed to them. The mash now used at Davis consists of five pounds each of bran and shorts, three pounds meat scrap, two pounds soy bean meal and five pounds ground barley. You can substitute the pea meal for the soy bean meal, but not for the meat scrap.

Poultry House of Tarred Paper

Can a good poultry house be made out of tar paper?—Subscriber, Oakland.

Tarred paper makes an excellent house, but the edges of the paper must be well battened down with strips of wood, and the roof must be laid over a foundation of rough lumber or it will soon sag and tear.

STORRS EGG LAYING CONTEST

Storrs, Connecticut, September 26, 1919. Report for the forty-seventh week ending September 25.

The forty-seventh week of the egg laying contest at Storrs finds the hens laying better than the five year average for the corresponding week by 27 eggs. The total production of eggs for the week was 2.794 or a yield of nearly 40 per cent. When it is realized that the birds have had very unfavorable weather conditions for the past month it is hard to explain just why they are doing so well. The management thinks however, that it is due to the abundance of tender green grass and succulent food which has been available, resulting both as a feed and a tonic keeping the birds in good health and stimulating good laying.

The Barred Rock pen owned by Jules F. Francais, of Westhampton Beach, Long Island, is the leading pen in the contest to date as well as the leading pen for the week, laying a total of 49 eggs. A pen of Leghorns entered by D. Tancred, Kent, Washington, was a close second, laying 48 eggs for the week.

The three best pens in each of the principal varieties are as follows:

Barred Plymouth Rocks

Jules F. Francais, 1837; Laurel Poultry Farm, 1773; Howard R. Sullivan, 1659.

White Wyandottes

W. Brady, 1548; Curtis L. Allen, 1441; Merrythought Farm, 1389.

Rhode Island Reds

GERMOZONE The Best Pet Stock Remedy

For Poultry, Pigeons, Dogs, Cats, Rabbits, Parrots, Canary and other birds or pet animals. Germozone is a universal and safe remedy; for colds, snuffles, roup, sore throat, loss of voice or singing, influenza, bowel trouble, distemper, sore eyes or ears, canker, fleet, loss of fur or feathers, sores, wounds, skin disease,—or other affections of skin or mucous membrane.

"My hens have never done so well as this year and haven't lost a single chick"—Mrs. Flora Kapple, Walker, Ia. "Simply grand for rabbits"—L. W. Browning, Beone, Ia. "Cannot praise Germozone enough. I use it for chickens, stock and housebold" —Mrs. Wm. Hoeppel, Hugo, Okla. "My bird puppies don't know what distemper is and I never had such good success before with chicks"—Curly Smith, Kennett, Mo.

Germozone is sold by most drug, seed and poultry supply dealers, or mailed postpaid in 25c, 75c and $1.50 packages from Omaha. Book on treatment of diseases free with each package.

GEO. H. LEE CO. pt. 416 OMAHA, NEB.

SLOBBERS AND SNUFFLES

By W. D. White

It is with interest that the writer reads the different "ads" of remedies for these diseases, and each time he wishes that he could impress on each rabbit raiser that old saying: "An ounce of prevention is better than a pound of cure."

It is true that these diseases are contagious and stock that is not in good physical condition is liable to infection and it is best that they be isolated from the others and treated with a good remedy at once.

But it is also true that it is better still to prevent these diseases by proper conditions and care. Drafts produce colds; quick changes in temperature and fogs do likewise; gases from foul hutches or foul grounds under them irritate the membranes of head or throat—result after a time, snuffles. The moral is, prevent drafts, keep hutches and grounds clean, thus saving time, trouble, expense and loss of stock.

Again stock may eat dirty hay, foul grain and, if hungry, their own droppings, resulting in stomach out of order, indigestion, and the outward sign of these inner troubles is slobbers.

Clean hay, good grain regularly fed with pure water are the means of prevention.

All rabbits require more roughage than concentrates, and good clean pure hay prevents many troubles. Clean foods, pure water and salt, given regularly—these with good care —are the ounce of prevention that saves the pound of cure.

SORE-HEAD

Dr. N. W. Sanborn, extension poultry husbandman of the University of Florida, recommends use of sulphur in treatment of chicken pox. He writes:

"Sore-head, or chicken pox, is common in all southern states. It is less likely to appear in pleasant weather than in the wet days of summer. Spring and autumn outbreaks are seldom hard to handle.

"Sore-head is a germ disease with a period of incubation and a history similar to measles in children. One attack is all that comes to any chicken. If a hen is exposed to the disease and does not become ill, it is because she had the disease when younger. There is a period from seven to 13 days after the chicken is infected before any sores or ulcers appear. This explains outbreaks following the buying of breeding stock: birds become infected before shipping and develop sore-head several days after their arrival.

"The source of infection is the blood of the ill chick, the scabs, and the discharge from the ulcers and the mucus of nostrils and mouth. In preventing spread and in stamping it out these facts should help. Dry sunny conditions hinder the spread of sore-head; damp, dark conditions are favorable to it.

"Sore-head is not caused by filth, damp houses, poor feeding, or low general vitality. It is the combination of sore-head with something else that makes it serious.

"Sore-head is spread by insects, mites and mosquitoes, though cases may follow scratches in the mouth or newly made punch marks in the feet. The buzzard eats dead chickens, sore-head ones too, and his droppings may bring the disease even when miles from a neighbor.

The Treatment

"There is one remedy that is approved, that is, the daily use of flour of sulphur given in the mash. When sore-head appears make your mash five per cent of sulphur, keeping it before all your poultry. That is, take 95 pounds of mash and add five pounds of sulphur. Feed this for five days, then omit the sulphur for two days, continue for three weeks.

"Epsom salts is also used by some, but should be used carefully. A clearing out of the bowels is always good treatment in any disease with fever, but it is needed early and seldom more than once. It can be added to the drinking water or to a moist mash, so that each chicken of three to five pounds gets one-quarter teaspoon or less. Under the use of sulphur some chickens will fail to show any symptoms of sore-head, yet they may be having a mild attack that will prevent them having it later."

Start Hens Laying Now Keep Them At It

THERE'S only one reason why most hens lay off laying as soon as egg prices begin climbing—right when you most want them to produce. They simply haven't the *vigor* in them to lay regularly. And they won't get it either until egg prices drop or until you put it into them.

Make *your* hens vigorous, make them lay. Just give them

Pratts Poultry Regulator

with a well-balanced ration. You will find Pratts will make hens lay heavily and regularly when they ordinarily would lay little, if any. It gives them keen appetites, sound digestion. Any year, it returns profits many times greater than its little cost. And this year—with egg prices beating all records —judge for yourself whether it's best for you to get Pratts. Keep your hens from catching colds, catarrh, roup—use

Pratts Roup Remedy

This remedy not only overcomes but prevents all these disorders common to bad weather.

Packed in bags, pails and handy packages

"Your Money Back If YOU Are Not Satisfied."

Sold by 60,000 dealers. There's one near you. Write for Pratts New Poultry Book—Free

"My WADE Saws Four Cords an Hour!"

"The Wade is certainly the farmer's friend. I have cut 1600 cords of yellow fir wood with it, and it's as good as the day I bought it."—Dan Ross, Corbett, Oregon.

Why break your back sawing wood by hand, when the powerful little Wade Portable Gasoline Drag Saw will *outsaw 10 men at one-tenth the cost!* Light, simple, economical. Cuts wood of any size. Averages 8 cords to a gallon of gasoline. Thousands of Wades now in use. When not sawing wood, the 4 h. p. engine will operate other light machinery.

Laws Affecting Dairying.

The general act as to the manner of keeping dairies provides that no person shall sell or deliver to any buyer or consumer unclean or stale milk, cream, butter or other milk product, nor any milk product which has been produced or handled under sanitary conditions, or which is produced from cows affected by any disease or within five days after, or 15 days preceding parturition. A dairy is defined as unsanitary if the drinking water is stagnant or polluted; if the yards or inclosures are filthy, or if on any part thereof manure is deposited in heaps or permitted to ferment; if the walls become soiled with filth; if on the interior of the stables or sheds an application of a lime whitewash is not made at least once in two years, or if in the mangers decaying material is allowed to accumulate; if the pails or other milk containers are not sterilized with boiling water or superheated steam whenever used; if the person or wearing apparel coming in close contact with the milk becomes soiled or is not washed from time to time; if a suitable milk house is not provided properly screened to exclude insects; such house shall not be located on the residence, in a barn or poultry house and shall be used for no other purpose; nor shall milk be cooled, mixed or kept in any sleeping or living apartment or place which is occupied by cattle or fowls, and such milk must be cooled within one hour after drawn from the cows; if any cesspool, pig pen or other filth accumulation is permitted within 100 feet of milk house, or 50 feet of the point where milking is done.

A creamery is defined as unsanitary if milk is permitted to be received from an unsanitary dairy or in a state of putrefactive fermentation; if the utensils are not sterilized or if the floor is so constructed that it permits milk to soak in the interstices so decay can take place; if drains are not provided which will convey away all refuse, or if any foul odors are permitted to reach the product, or if the factory does not have good ventilation or permits insects or other species of animal life, or if the bodies or wearing apparel of the employes should be uncleaned or unwashed.

No addition of any compound containing salicylic acid, formaldehyde, coloring matter or chemical, other than salt shall be added to prevent fermentation in the case of milk or cream, except that buron may be added if the milk container so plainly states. In case of the addition of gelatine or other substance, the container shall plainly contain a statement of such addition. The word "Pasteurized" may be used only upon a milk product if the same has been exposed to a temperature exceeding 150 degrees Fahrenheit as provided later in the act.

No person shall sell or receive for sale any milk or cream unless based upon liquid quart, containing 57.75 cubic inches, except that milk may be sold on a basis of its butter fat content or at eating places by the glass. No person shall sell or have in his possession for sale any milk or milk product as pasteurized, nor use that word in connection with such milk product unless there has been an actual pasteurization of the milk as provided by the act. Butter shall be sold only in terms of pounds and ounces avoirdupois. Every person operating any dairy where more than four cows are milked, and every milk dealer must register prior to November 1st of each year a statement showing his full name and address and also that of the owner of the business with the statement of class of business carried on and the number of cows milked in the case of the dairy, and make such other annual reports on blanks, furnished by the state dairy bureau, as it may require.

In case any butter is sold in a package, and under a label purporting to designate the producer of the butter or the place of production, it must correctly name its true producer or place.

No one shall manufacture, sell or have in his possession for the use of patrons any product or compound made in whole or in part from any article not produced directly and at the time of manufacture from unadulterated milk or cream, or shall be colored in imitation of butter or cheese, unless the same be plainly marked as "Oleomargarine," or "substitute," with the name and address of the manufacturer, place of manufacture and ingredients, and everyone furnishing such product to a consumer must accompany the same with a written and verbal notification that the substance is a substitute.

Renovated butter is defined as butter reduced to a liquid state and manipulated in connection with milk or some product. In order to deal in renovated butter, oleomargarine, or any other butter substitute, a license must be procured from the state dairy bureau and a complete record of the different classes of substitutes must be kept.

It is unlawful for any milk hauler or person receiving or purchasing milk to fraudulently manipulate the weight measure or test or take unfair samples. In taking such samples, the milk or cream shall be thoroughly manipulated until uniform and homogeneous in richness before the sample is taken, nor shall the Babcock test when used be under or over read or the records falsified, or read at any temperature other than between 130 degrees and 140 degrees Fahrenheit. The basis of measurement or weight is 17.6 cubic centimeters for milk and 9 or 18 grams for cream. Milk or cream purchased on the basis of butter fat must be made by a tester licensed by the state dairy bureau.

The act contains particular specifications to which standard Babcock testing glassware must comply.

It is unlawful for anyone to produce, prepare or have on hand for sale any milk or milk product which is adulterated. The term milk product applies only to such as consist of milk or milk products alone. It is unlawful for anyone to use any word describing milk or milk products wherein the thing sold is not within the definition as given in the act. Milk is defined as the fresh clean lacteal secretion obtained within 48 hours if raw and 60 hours if pasteurized immediately prior to its delivery to the consumer or purchaser from the complete milking of one or more healthy cows properly fed, excluding that obtained within 15 days before and five days after calving; such product contains not less than three per cent of milk fat and not less than 8.5 per cent of solids, not fat. Skim milk contains not less than 8.8 per cent solids and is that milk from which cream has been removed. Condensed milk is that from which a considerable portion of the water has been evaporated. The standard of purity is that prescribed by United States department of agriculture. Condensed skimmed milk contains 18 per cent of milk solids and tire grains of corn, wheat, rye, barley, is skimmed milk from which considerable portion of water has been evaporated. Cream is that portion of milk, rich in milk fat, skimmed or separated therefrom by centrifugal force, fresh and clean, containing not less than 18 per cent of milk fat. Evaporated cream is cream from which a considerable portion of water has been evaporated. Milk or butter fat has a Reichert Neisell number, not less than 24 and its specific gravity not less than 9.05 (40 degrees C.). Butter is the clean non-rancid product of the fat of fresh or ripened milk containing not less than 80 per cent milk fat. Cheese is the sound solid and ripened product made from milk or cream by coagulating the casein with rennet or lactic acid. Full milk or cream cheese must contain not less than 50 per cent milk fat. Half skimmed cheese must contain not less than 25 per cent and must be plainly marked. Buttermilk, ice cream, fruit ice cream, nut ice cream and iced milk are also defined. Pasteurization is defined as the process which consists of uniformly heating milk at a temperature of not less than 140 degrees Fahrenheit or not less than 25 minutes, and immediately thereafter cooling the same to a temperature not above 50 degrees Fahrenheit. Repasteurization is forbidden. All apparatus must be kept clean. No milk may be sold from which any part of the cream has been removed, unless plainly labelled as skimmed milk.

All persons engaged in the preparation of dairy products must comply with the following rules:

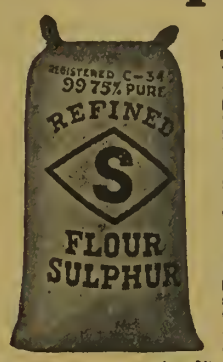
The name or identification mark of every producer shall appear in a conspicuous manner on or attached to every milk, cream bottle, can or container. All such cans, bottles and containers shall be thoroughly washed and sterilized after using. Every producer and private or common carrier of milk or the containers thereof must keep their vehicles clean and covered to protect the milk at all times from dust and the rays of the sun. All cans and containers should be handled carefully, right side up. Every vehicle for the transportation of milk shall be inclosed and provided with a canvas covering to protect the milk or cream from the sun or outside warm air, except while taking on or dicharging freight. No contaminating thing shall be carried on top of or in proximity of dairy products. No milk, cream or empty bottles or containers therefor shall be allowed in unclean vehicles or those used for hauling manure or garbage. All ingredients used in the process of making assembled dairy products must be produced under the same sanitary conditions and regulations as are required for the production of milk and cream. All such products must plainly state that they are assembled.

Brands for branding different grades of cheese are issued by the state dairy bureau, which is authorized to issue uniform brands consecutively numbered with different grades. No one other than the one to whom such brand is issued may use the same. Cheese is graded: (1) Such as is manufactured from whole pure milk having not less than 50 per cent butter fat, conspicuously branded as full cream cheese; (2) made from full milk having not less than 25 per cent butter fat, branded as half skimmed cheese; (3) made from full skimmed milk, branded as skimmed cheese.

The word person as used in the act is defined as including individuals, corporations, companies, societies and associations, and the act applies to every milk producer or handler, no matter how small, hotel keepers, restaurant keepers and boarding house keepers or anyone who serves meals and accepts money therefor. Failure to conform to provisions of the act is a misdemeanor punishable by fines of various amounts, or imprisonment for varying periods, or both.

The best cotton pickers at Blythe make more than $6 a day.

Sulphur



It has been proven and so recommended by the University of California that if you sulphur your grape vines and orchards SIX times they will not be affected by MILDEW or RED SPIDERS.

ANCHOR Brand Velvet Flowers of sulphur, also EAGLE Brand, Fleur de Soufre, packed in double sacks, are the fluffiest and PUREST sulphurs that money can buy: the best for vineyards, the best for bleaching purposes, LEAVING NO ASH.

VENTILATED Sublimed Sulphur—Impalpable Powder, 100 per cent pure, in double sacks, for Dry Dusting and making Paste—(Atomic Sulphur).

For LIME-SULPHUR SOLUTION, use our DIAMOND "S" BRAND REFINED FLOUR SULPHUR. We can furnish you this sulphur at such a low price that it would pay you to mix your own solution and net you a profit equal to the amount paid out for labor in spraying your orchard, even if you pay your men $4 per day for making the solution and applying same.

To create additional available plant food, drill into the soil 100 to 400 pounds per acre DIAMOND "S" BRAND POWDERED SULPHUR 100 per cent pure. This has increased various crops up to 500 per cent.

Also PREPARED DRY DUSTING MATERIALS, Tobacco Dust, Dry Bordeaux, Dusting Sulphur Mixtures, etc.

And "Anchor" Brand Standard LIME-SULPHUR SOLUTION 33 DEGREES BE., Sulphur Paste, Nicotine, Blackleaf 40, etc. Fungicides and Insecticides.

Carried in stock and mixed to order.

San Francisco Sulphur Co.

624 California St. San Francisco, Calif.

We are equipped to make immediate shipments. Send for "ILLUSTRATED BOOKLET," also booklet "NEW USES FOR SULPHUR", Price-list, and Samples.

Please state for what purpose you use the sulphur, quantity needed, and date of shipment preferred. Telephone Kearny 971

A Modern King Canute

The people who lived in the good days of the wise King Canute thought he had the power to make the ocean recede at a mere word of command. Today the Bell Telephone Company finds itself in a position not unlike that of the ancient king. Its mere word will not hold back an ocean of expense.

Rigid economy and the most modern methods of operation have made it possible for the Bell Company to keep its rates at a far lower level than that of the commodities which it must use in construction and upkeep. But it has felt the rising tide of costs just as certainly as has every business and every family.

The one source of revenue of the Bell Company is the price you pay for service. If this price fails to cover fair wages and necessary materials, then both you and your telephone company must suffer.

For one year the Bell Company was under Government control. The Government analyzed methods and costs; and established the present rates as just. All the Bell Company asks is a rate sufficient to provide satisfactory service to every subscriber.

Household Department

"CONSOLATION"

The red rust gets the wheat crop
And the hoppers eat the rye.
The bugs chew up the oat stalks
While you kiss them all good-bye.

A blight assails the barley
And the wire-worm bores the corn.
And there's nothing left to harvest
On the early autumn morn.

A rot feeds on the apples
The scab adorns the spud
And a pest attacks the melons
When they're nothing but a bud.

And then the days are gloomy
There will be no plenty now.
There's nothing left of harvest
But you've got the dairy cow.

And next you fall to thinking
Just a-planning things somehow
And you find you're mighty lucky
Just to have that spotted cow.

You think about the wheat bins
And the oat bins and the mow
And don't you feel like saying,
"My kingdom for a cow"?

It's nice to have the wheat fields,
When the wheat is worth two per
But when there's nothing on them
Isn't a cow what you prefer?
—R. D. Galt.

GOOD LOAF CAKE

By Cultivator Readers

IN "Household Queries" in the issue of September 20 a subscriber at Sierra Madre asked for recipes of good loaf cakes that would keep for several days, something suitable for lunch boxes. In reply we have a splendid lot of contributions from Cultivator readers:

Mrs. John Norton, Woodlake

In answer to the Cultivator's request for cake recipes am submitting a few which I know are reliable and which are within the reach of the average housewife.

White Loaf Cake. Two cups sugar, one cup butter, one cup sweet milk, whites of six eggs beaten stiff, three cups flour, two teaspoons baking powder, two teaspoons lemon extract.

Never Failing Cake. One and one-half cups sugar, one-half cup butter, one-half cup sweet milk, three whole eggs or yolks of six eggs, two heaping cups sifted flour, two teaspoons baking powder, one teaspoon of any flavoring.

Cheap Cake. One cup sugar, two-thirds cup butter or butter substitute, one egg, one cup milk, two and one-half cups sifted flour, two teaspoons baking powder, one teaspoon vanilla extract.

Any of the above recipes may be baked in layers and by using different fillings or different flavorings a number of delicious cakes may be made. Most housewives know the art of cake baking but for those who do not let me say that a loaf cake must be baked slowly and steadily and is done when it begins to leave the sides of the pan.

Mahogany Cake. Two cups sugar, three-fourths cup butter, two eggs, two-thirds cup ground chocolate dissolved in one-half cup hot water, one cup sour milk, one teaspoon soda, one teaspoon baking powder, one teaspoon vanilla, three cups flour.

Toast Cake. One cup sugar, two eggs, one and one-half tablespoons water, one and one-half teaspoons baking powder, one cup bread crumbs, one cup walnut meats. A small but delicious loaf cake.

Gingerbread. One-half cup sugar, one cup butter or butter substitute, two cups molasses, three eggs, four cups flour, one cup milk (buttermilk or sour milk preferred but sweet milk will do), one teaspoon soda, one tablespoon each ginger and cinnamon.

Cookies for the Lunch Box. One cup sugar, one cup sour cream, one teaspoon soda, one teaspoon flavoring extract, flour enough to make a dough to roll out; bake quickly.

Mrs. Helen W. Bullock, Redlands

Salvation Army Doughnuts. Two cups sugar, two eggs. Beat to a cream. One and three-quarters cups milk, one teaspoon salt, one tablespoon lard, one-half teaspoon cinnamon or nutmeg, five cups sifted flour. Roll thin. Makes four dozen.

Plain Cake or Cup Cakes. Put into measuring cup the sweet cream from one quart milk, fill cup scantily with new milk. Add two eggs, one cup sugar, one cup flour. Beat three minutes. Then add two teaspoons baking powder sifted three times through cup flour. Beat two minutes. Bake 40 minutes.

Governor Dix Ginger Cake. One cup molasses, one-half cup brown sugar, one-quarter teaspoon cloves, one-half tablespoon cinnamon, one-half tablespoon ginger, one tablespoon cocoa, three-quarters teaspoon vanilla. Add two teaspoons soda dissolved in one cup boiling water. Stir thoroughly. Add one-half cup cold water or coffee, three-quarters cup warm shortening, and flour until thick as molasses. Beat. Break in one egg. Beat all with egg beater. As many raisins as can be afforded. Bake in two 8-inch cake tins.

Soft Gingerbread. One cup sour milk and cream, one-half cup sugar, one-half cup dark honey or molasses, one egg, one teaspoon ginger, one teaspoon soda dissolved in three tablespoons hot water, one cup flour. Beat three minutes. Add one more cup flour. Beat two minutes. Bake 40 minutes.

Easton Subscriber

Devil's Food or "Poor Minister's Cake". Cream one-half cup Crisco and one cup brown sugar. Add two beaten eggs. Sift together one teaspoon baking powder, one teaspoon soda, one-half teaspoon salt and two cups flour. Dissolve three tablespoons chocolate in one-half cup hot water and add with one-half cup sour milk or buttermilk. Beat well and bake as loaf or layer. Vanilla flavor preferred.

Mrs. S. D. Bickford, Gardena

Seeing an inquiry for a good loaf cake I submit the following:

Hot Water Cake. Four eggs, two cups sugar (granulated), two cups flour, two teaspoons baking powder, one teaspoon vanilla. Beat eggs, add sugar and beat again; then the flour and lastly the hot water. Bake about 40 minutes in a moderate oven. Makes very thin batter.

Mrs. P. Pedersen, Lindsay

I read in your valuable paper that you wanted some good cape recipes to publish. This one I send you is a very good one and I hope you can use it in your household department, which is very interesting:

Potato Chocolate Cake: Very good cake may be made with potatoes. Recipe calls for one cup of hot mashed potatoes to two of flour. Mix the flour with potatoes and add three beaten eggs, two cups sugar, half cup milk, one cup chopped nuts, two and one-half teaspoons baking powder, two-thirds cup ground chocolate, two-thirds cup shortening, one teaspoon cinnamon and nutmeg and half a teaspoon of ground cloves and salt.

One good point of this cake is that it remains fresh a long time.

Mrs. W. J. Ferrell, Santa Barbara

In answer to Sierra Madre's request for a loaf cake that will keep moist for lunches would like to add this one:

Chocolate Loaf: One-fourth cup butter, one cup sugar, two heaping tablespoons chocolate melted in hot water, one and a half cups flour, one teaspoon vanilla, one-half teaspoon salt. Bake in loaf or will make two nice layers.

Mahogany Cake: One and a half cups sugar, one half cup butter or one-third cup Crisco, one-half cup sweet milk, two cups flour, two eggs beaten separate, two teaspoons soda in sweet milk; take one-half cup unsweetened chocolate, one-half cup sweet milk and cook until thick; cool and add to above. Bake in two layers, spreading cake mixture well out to edges of pan and leaving rather thin in middle as it has a tendency to raise rather thick in baking.

Chocolate Filling: One and a half tablespoons butter, one-half cup unsweetened chocolate, one-fourth cup milk, one and a fourth cups powdered sugar. Cream and boil four minutes. Cool and spread.

Hope some one will enjoy these as much as we do the other recipes found in the Cultivator.

Mrs. L. O. Bostwick, Harper

The following recipes are tried and true and may be of use to some reader

of the household department of the Cultivator:

One and a half cups sugar, two cups flour, two teaspoons baking powder. Sift these three to five times. Add to this one cup milk and butter the size of an egg (have butter hot). Beat thoroughly and add the beaten white of one egg. Beat well.

Molasses Layer Cake: One cup molasses, two tablespoons sugar, yolks of two eggs, one heaping teaspoon soda, two and a half cups flour, one teaspoon each of cloves and cinnamon, a little salt. Stir together and add one cup boiling water.

Filling for above cake: To the beaten whites of two eggs add seven tablespoons sugar and one cup chopped raisins. Cook raisins and sugar till thick, then beat them into the eggs.

Mrs. C. A. Butler, Berkeley

In reply to the party who would like a recipe for a plain loaf cake, am sending my two favorite recipes, one a light cake, the other a dark or spice cake.

Loaf Cake: One-fourth cup butter, one and a half cups sugar, two and a half cups flour, one cup sweet milk, two eggs, two teaspoons baking powder. Cream butter and sugar, add eggs well beaten, then mix and flavor with lemon. I make a change by adding vanilla or wintergreen, orange or any favorite flavoring at different times.

Spice Loaf Cake: One-third cup Crisco, one-half cup sugar, one-half cup molasses, two ounces chocolate, one cup sour milk, two cups flour, one-half teaspoon salt, one tablespoon ginger, one teaspoon cinnamon, one-fourth teaspoon cloves, one teaspoon soda, one teaspoon baking powder.

Cream Crisco and sugar, add molasses, then sour milk with the soda stirred in well. Add salt and spices, baking powder and chocolate to the flour, beat well. Bake in two loaf cake pans 45 minutes. This is good and keeps moist for days.

Ethel Williamson, Riverdale

Apple Cake: Peel and slice enough apples to make one pint and simmer in one scant cup of molasses with one heaping cup sugar, one scant cup shortening, one rounding teaspoon cinnamon and one-half teaspoon cloves. Simmer slowly until apples are quite dark, then cool until just warm; stir in one or two eggs, one and a half cups sour milk (water will do), one rounding teaspoon soda, a pinch of salt and enough flour to make a soft dough (like ginger cake). Stir in a few raisins, a teaspoon lemon extract, and make in a slow oven.

By adding more raisins, citron, etc., this recipe can be made into a very good fruit cake. It will keep indefinitely if put in a tin container with an apple.

Mrs. H. B.

I am sending a few cake recipes and hope others will get the satisfaction from them that I have. I like the Cultivator for its good advice in so many ways and hope we can always take it.

Eggless Fruit Cake: One cup sugar, one cup molasses, one cup sour milk, one-half cup shortening, one-half pound raisins, three cups flour, one teaspoon cinnamon, two teaspoons cloves, one and a half teaspoons soda, two teaspoons baking powder. When using lard or any shortening I add a little salt to make up for what is in butter.

Whole Wheat Brown Bread: One-half cup butter or lard, three-fourths cup raisins, one-half cup brown sugar, one-half cup molasses, one scant teaspoon salt, one pint sweet milk, two level teaspoons soda, three cups whole wheat flour, one cup white flour.

Old Fashioned Drop Cakes: One-half cup sugar, one-half cup molasses, one-half cup shortening, one-half cup hot water, two and a half cups flour, two eggs, one teaspoon lemon, one teaspoon ginger, one and a half teaspoons soda. Mix them and let stand an hour before baking. Then drop on greased tins and bake in a hot oven. Sometimes add nut meats or raisins.

Just a Cake: Two cups sugar, three eggs, one-half cup shortening, three cups flour, one cup sweet milk, one teaspoon lemon flavor, two teaspoons baking powder.

Any of these cakes will keep for days in a cloth or cake box.

Mrs. F., Reedley

Burnt Sugar Cake: Cream one-half cup butter, one and a half cups sugar, yolks two beaten eggs, one cup water, two cups flour; beat five minutes; three teaspoons caramel, one teaspoon vanilla, one-half cup flour, two teaspoons baking powder, whites two eggs.

To make caramel put one cup sugar in granite saucepan, stir over fire till it becomes liquid and smokes, add one-half cup water, boil till all is dissolved. Will keep indefinitely. Use for flavoring for caramel fillings, pies, cookies, etc.

Fruit Pudding: One cup sugar, one tablespoon shortening, one cup milk, two teaspoons baking powder, flour to make as stiff as for cake. Pour batter in buttered baking pan and pour over the batter the following: three cups fruit and juice (berries, cherries, dried fruit, etc.), one cup sugar, one cup hot water, butter size of an egg. Bake in moderate oven.

Subscriber, Riverside

Drop Cake: One cup sugar, one-half cup sweet milk, scant one-half cup butter or other shortening, one cup chopped raisins, one egg thoroughly beaten, one teaspoon soda in a little hot water, one teaspoon cinnamon, one-fourth teaspoon cloves, flour sufficient to drop from spoon. Beat thoroughly. Bake in muffin pans.

Coffee Cake: One-half cup molasses, one cup brown sugar, one-half cup cold coffee (strong), one-half cup shortening, little salt, one-half cup sour milk or buttermilk, one and a half teaspoons soda, one cup chopped seeded raisins, one-half teaspoon all kinds spices, one and a half cups sifted flour. Bake rather slow. This does not call for eggs but one beaten yolk and white separately improves the cake. Fine for lunches and should it become dry—which isn't likely in an average family — steam it, make a sauce and you have a fine dessert for dinner.

IN THE KITCHEN AND POULTRY YARD

By A. M. H.

There is nothing more useful in the kitchen than common baking soda. A bit of soda cooked with green vegetables will keep them a fresh color and make them more tender, and a very little soda put in acid fruits before the sugar is added will take less sugar to sweeten and will not injure the flavor of the fruit.

To scour knives and tinware easily mix a small quantity of soda with brick or fine ashes and they will polish well. Soda and ammonia rubbed on with a flannel cloth will keep the nickel of the stove bright and shining Try soda for removing grease spots from the kitchen floor. Moisten the soda and rub on the grease spots with a cloth.

When dressing chickens singe them, then rub them all over with soda, wash in warm suds and rinse well. You will be surprised how quickly they are perfectly clean and free from pin feathers and down.

The best way to keep the refrigerator clean and in a sanitary condition is to wash every portion of it with hot suds with a little borax added; wipe over quickly with strong soda water boiling hot; then wipe out carefully and leave open to cool and air.

To keep roaches and large black ants out of the kitchen and pantry, wash floors and shelves with the hot suds made with the borax and soap, then mix well together equal parts of ground red pepper and powdered borax and sprinkle in all places where they are found and they will soon disappear.

Stock Hay	8.00@12.00
No. 1 Barley Straw, bale	.50@80

Citrus Markets

Los Angeles, October 8, 1919.

The Valencia market is in an exceptionally satisfactory condition, $5 f. o. b. price prevailing. Some auction sales around $8 and $9 are common for good stock. The rain of last week held back picking for a time but packing houses were full so that there was scarcely any slacking of outgoing cars. Car shortage has lessened somewhat and between 400 and 500 cars weekly are now going out.

Lemons are in special favor and some exceptional prices are being received. Eastern prices are running usually between $7 and $8 but some auction sales have been made above $10.

Shipment

Shipments of citrus fruits to date since November 1, 1918: Southern California: Oranges, 33,110 cars, lemons, 9.30, total 42,419. To same date last season; oranges, 14,007, lemons 5,650, total 19.657. Central California this season: Oranges, 4,427, lemons 354, total 4,781. To same date last season: oranges, 2,539, lemons 115, total 2,654. Northern California: oranges 244, lemons 2, total 246. Last year same date: oranges 203.

TEHAMA COUNTY FARM BUREAU

The regular meetings of the Tehama County farm bureau will be held as follows during the month of October: Oak Park, 10; Richfield, 13; Antelope, 14; Corning, 15; Bend, 17; Los Molinos, 27; Proberta, 29.

There will be a meeting of the board of directors on Friday, October 17, at 1:30. This meeting will be for the purpose of electing a delegate to the State Federation of Farm Bureaus, which will meet at Berkeley on Wednesday, October 22.

GLENN COUNTY FARM BUREAU

October meetings will be held at Jacinto, 10; Codora, 13; Capay, 15; Plaza, 17; Willows, 20; Elk Creek, 22, 2 p. m.; Grapevine, 22, 8 p. m.; Larkin, 24.

The fall conference of farm advisers will be held at Berkeley October 20-25. The farm adviser will not attend meetings in the county between these dates since he will be in attendance at conference.

KITCHEN AND POULTRY YARD

Continued from Page 497

A good way to use all the broken china dishes is to crush the pieces fine, then mix the grit with wheat bran and feed the hens the mixture every evening. This makes the gizzards firm and covered with fat and the hens lay more eggs when fed in this way. When fowls of any kind have sore eyes there is no better remedy to use than warm borax water rubbed into the eyes with a feather. Two or three applications will cure all fowls not too badly affected. This simple remedy was tried after many others had failed and with splendid success; and it is good for young and old fowls of all kinds. Lime is cheap and when dusted plentifully over the premises occupied by chickens about once a week will prove highly beeficial.

1919 AGRICULTURAL CROPS

The last government estimate for 1919 crops in California gives the following figures: Corn, 2,888,000 bushels; oats, 5,576,000; barley, 31,000,000; potatoes, 11,686,000; sweet potatoes, 924,000; rice, 8,750,000; alfalfa, 4,431,000 tons.

NORWALK TIRES

No birds get through *his* shot patterns

THE successful sportsman knows that his bag depends almost as much upon the shot pattern, or evenness with which the shot spreads out and covers the game, as it does upon his gun handling.

The secret of uniform game-getting patterns is in the control of the gas blast from the exploding powder. This in turn depends upon the *wadding* in the shell.

The Winchester gas control system

The Winchester system of wadding and loading is the result of repeated experiments to determine the most effective control of the gas blast.

The base wads of Winchester Shells are constructed to give what is known as progressive combustion to the powder charge. The ignition spreads to the sides, in all directions, as well as forward.

Under the heat and pressure of this progressive combustion the tough, springy driving wad expands and fills the bore snugly, completely sealing in the gas behind. In being driven through the bore this wad offers just enough resistance to the gas blast to insure complete combustion of every grain of powder, so that the full energy of the whole powder charge is developed at the muzzle. Thus none of the shot charge leaves the gun until it is being driven by the maximum energy and velocity possible from the load.

At the muzzle, the expanded, snug-fitting driving wad is slightly checked by the muzzle choke or constriction, while the shot cluster travels on unbroken by gas blast or wadding, making the hard-hitting uniform pattern for which Winchester Shells are world-famous.

A patchy pattern often means a miss, many times a cripple, and sometimes badly mutilated game.

The hard-hitting Winchester pattern is evenly distributed. No game gets through, and no game is mutilated.

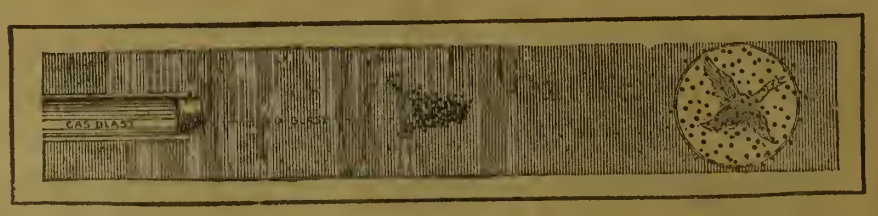
Uniform shells. From primer to crimp Winchester Shells are so balanced in construction as to insure the maximum pattern possible from any load. The broad fish-tail flash from the primer gives even and thorough ignition; the driving wads completely seal in the gas behind the shot; the stiffness of the crimp or turnover at the shell head is varied exactly according to different loads, great care being taken never to stiffen it to such a degree that it offers undue resistance to the powder explosion.

In addition Winchester Shells are, of course, thoroughly waterproof, insuring true shooting in damp saturating salt air or drenching rains. A special lubrication of the paper fibre prevents brittleness and splitting in dry weather.

Clean hits and more of them

To insure more hits and cleaner hits in the field or at the traps be sure your shells are Winchester Leader and Repeater for smokeless, Nublack and New Rival for black powder. Leading hardware and sporting goods dealers in every community carry Winchester arms and ammunition. They will be glad to assist you in determining the particular load best suited to your purpose. Upon request, we will send you, free of charge, our interesting booklet on Winchester Shotguns and Loaded Shells.

Winchester Repeating Arms Co., Dept 207, New Haven, Conn. U. S. A.



The Winchester system of wadding. The wadding expands evenly, sealing in the gas blast all the way to the muzzle, where the wadding is checked by the "choke" or constriction. The shot cluster travels on ahead unbroken. Actual test target 370 pellets out of 421 or ... of the shot charge (1¼ oz. of 7½ chilled) inside a 30-inch circle at 40 yards.

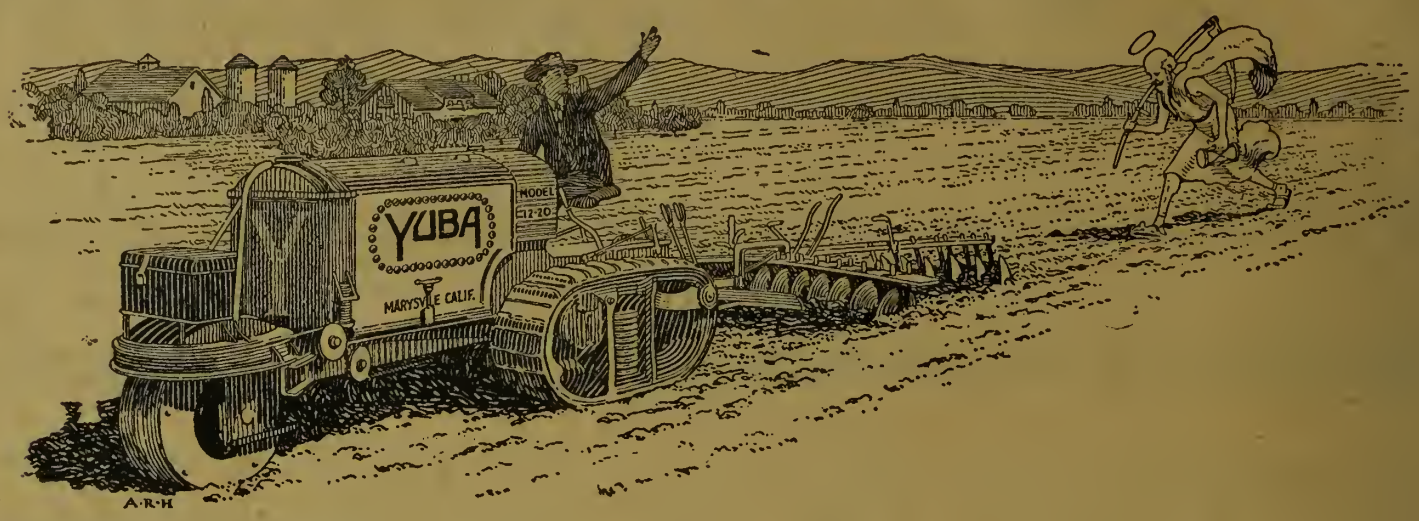
California Will Produce This Year 7,500,000 Bushels of Rice

The field for rice production is being extended with even greater rapidity than that for cotton. The production started in a large way in the northern end of the Sacramento Valley. It was later taken up in the southern end, then in the San Joaquin, then in the Imperial Valley, and now rice threshers are humming almost in the outskirts of the city of Los Angeles. The scene above is from one of the rich fields of Yolo County.

Time has no terror for the owner of a Yuba



HE is confident of his ability to do his work well, quickly, and in proper season by reason of his knowledge of its long record of reliable performance.

HE is insured from the haunting dread of a breakdown at a time when minutes cost dollars by the high quality and superior strength of its working parts.

HE knows from experience and observation that he will continue to use his YUBA year after year, as a workman uses a fine tool—that a moderate annual outlay for repairs on wearing parts will restore its efficiency to par.

HE is certain that *time* will prove the economy of his investment in his YUBA tractor.

Ready for Immediate Delivery
There are two sizes of YUBA Ball Tread Tractors:

12-20 - 20-35

Write us for the catalogue of the size you need; tell us how many acres you farm, and the kind of soil.

The Los Angeles Live Stock Show

FROM the time of the opening of the state fair late in August to the Southern California fair which closed in Riverside last Saturday there have been made many remarks in effect that California's advancement in the production of pure bred live stock has been most astonishing. To be sure, the breeding of thoroughbreds was established in California many years ago and gave a wonderful impetus in this direction, though this was largely taken up by the sporting people. Other types of pure breds have been maintained in California, and to its material advancement, but only within the last eight or ten years has this growth been marked.

At the state fair judges and others who for years attended exhibitions in other states, or possibly all states of the Union, remarked on the magnificent showing made by Pacific Coast breeders. And this showing was not brought about by offering great prizes, for there were no abnormally large premiums awarded even at the state fair, and in spite of the much smaller premium lists of the district and county fairs great strings of pure breds were exhibited. We heard it remarked at the Riverside fair that in one particular class of pure breds there was a showing even superior to that made at Sacramento.

Now comes the Los Angeles live stock show and later the one at San Francisco, which will be held November 1-8, and the same week that at Phoenix.

These great expositions are gratifying to all who have pride in California, and they are proving most educational, not only because of the exhibits but because of the sales which bring together large numbers of buyers and others who note the estimates of value placed upon these pure bred animals which have outstanding quality.

The Los Angeles show opens October 18 with every stall and every inch of available space occupied. Manager Thomas informs us that he has had a force of carpenters busy constructing new sheds and barns, and these have filled practically all the available space on the grounds at Exposition Park.

Below is given an outline of the judging and other features of the program for the guidance of those who may wish to avail themselves of the opportunity of getting greatest good from this exposition. Modern day judges have formed the habit of giving freely of their experience, and it is now considered entirely proper for the owner of an animal to ask why it has been placed first or last, as the case may be. The judges freely give their reasons for the belief that is in them, and this is proving one of the most attractive features at the state and other fairs. We doubt not this plan will be followed at the Los Angeles show and explanation made as to the reasons for placing the ribbons.

One feature which will also prove educational is the admitting of boys' and girls' agricultural school clubs. A number will attend from the high schools of Los Angeles and surrounding smaller towns. These club members will usually attend in a body and will not only watch the judging by the professionals but will themselves engage in judging contests.

The program for the week is:

PROGRAM LOS ANGELES LIVE STOCK SHOW

Saturday, October 18, 1 P. M. Weighing live stock. Band concert in afternoon.

Monday, 9 A. M. Judging poultry. Judging Aberdeen-Angus. Judging Holsteins. Judging Durocs and judging sheep. 1 P. M. Judging Shorthorns. 1.30 P. M. Horse show in front of grandstand, races, band concert.

Tuesday, 9 A. M. Judging Shorthorns, draft horses, Hampshires, poultry and Jerseys. 1 P. M. Judging Herefords, car lots of cattle and swine and Berkshires. 1.30 P. M. Horse show in front of grandstand, races, band concert.

Wednesday, 9 A. M. Judging Herefords, Berkshires, Guernsey cattle. draft horses, Poland-Chinas. 10 A. M. Zone 5, California Cattlemens Convention in Administration Building. 1 P. M. Judging steers, jacks and ponies, goats. 1.30 P. M. Sale of Berkshires. Horse show in front of grandstand, races, band concert.

Thursday, 9 A. M. Judging Ayrshires, rabbits, pigeons and cavies. 9.30 A. M. Farm Bureau Dairymens Convention in Administration Building. 1.30 P. M. Judging Dutch Belted cattle, horse show in front of grandstand, races, band concert. 2.00 P. M. Farm Bureau Dairymen's cow judging demonstration.

Friday, 9 A. M. Judging unfinished classes. 11 A. M. Judging draft teams. 1 P. M. Grand march of live stock, including all prize winners. 1.30 P. M. Horse show in front of grandstand, races, band concert.

Saturday, 9 A. M. Dog show, judging rabbits and cavies. 1.30 P. M. Horse show in front of grandstand, races, band concert.

Sunday, 1 P. M. All animals on exhibition, dog show. 1.30 P. M. Band concert.

We have asked Manager C. R. Thomas to answer in a few words as to why or wherein is the value of live stock shows.

WHY IS A LIVE STOCK SHOW?

By C. R. Thomas, Manager Los Angeles Live Stock Show

I HAVE been asked the question a good many times, "What are the especial benefits to be derived from a live stock show?" There are so many benefits to be derived from a live stock show that it is a little difficult to know where to begin to answer the question.

In the first place, the best animals of the various breeds of live stock are brought to a show, thus giving the breeders an opportunity to compare their own breeding with that of other breeders. Oftentimes a man stays so closely at home and becomes so wedded to his own animals that he does not know what his neighbors are doing and what kind of animals they are breeding, and sometimes he thinks that he has the best animals in the country and is so satisfied with them that he cares nothing about what others are doing.

But when this man comes to a live stock show, he very often goes home much wiser than he came—at least, if he is a good judge of live stock. As an illustration, I will relate a little circumstance that happened at the American Royal Livestock Show in Kansas City about 16 years ago. A young man from Ohio entered a calf, and every three or four days I received a letter from him stating what a wonderful animal he had and how he could easily win in his class. There were about 40 entries in the class his calf was eligible to compete in. One rule of the show was that no one could be excused from showing his animals without a reasonable excuse once they arrived at the show grounds, the same to be determined by the manager. The morning the calf was to have been shown the owner came to me with a long face asking to be excused from leading his calf into the ring. I asked him what excuse he had to offer. I knew the reason that he did not want to show and could hardly suppress a smile; but I wanted to know what he had to say. His answer to my question was that the calf had got loose the night before and got very much excited and had run all over the barn. I told him I supposed that was a good enough excuse and told him he did not have to lead his calf into the ring. After I told him this he smiled and said, "Mr. Thomas, I'm going to tell you the truth; my calf isn't good enough to show against the others here."

Did that young man go home discouraged? No; he went home with a determination to get something better than he had ever had before, and to start breeding along the right lines, and he was afterwards heard from. So it is with a great many people; they don't know until they see assembled the best that there is to be had, and then they can draw true comparisons.

A live stock show also creates a market for the breeders who exhibit there. The blood of champion and prize-winning animals is always sought by ambitious breeders.

A big live stock show also is a benefit not only to the breeders but the people at large, for the reason that it gives the breeders an opportunity to exchange ideas which are always valuable. Different methods of feeding are discussed, the kind and quantity of feed to be used, etc. It brings the breeders more closely together and thus engenders a fellowship and good feeling that is beneficial.

Much can be said in the papers and by correspondence, but no man can describe an animal just as it looks.

A live stock show not only benefits often the breeders themselves and the spectators, but it is a benefit to the community in which it is held. The merchants, the manufacturers, the hotel proprietors and other interests in a city where a live stock show is held will tell you that it brings a better class of people to the city than does almost any other attraction — a class of people which usually sets apart one week in the year to attend the show, at which time they take their families with them, the women to do their shopping while the men examine the live stock. And in all of the large cities where big shows are held annually the merchants look forward to these shows and encourage them to the utmost, knowing the benefits that they annually receive.

The live stock and allied interests of the United States are about 16 million dollars greater than the combined value of all the railroads of the United States, with the watered stock included, and the quality of the live stock is getting better each year; and it is to a large extent the live stock shows which are responsible for the improvement.

Branching off a little from the benefits of the show, I will state that the agricultural returns from Los Angeles County are the greatest of any county in the United States. Of course, it is the productive quality of the sire that is responsible for these returns, but in order to hold the record this county has established it becomes necessary to keep the soil well fertilized. And everybody knows that the best fertilizer in the world is barnyard manure.

A live stock section is always a rich section.

The judges are:

Dairy Cattle

Holstein-Friesian: John B. Erwin, Minneapolis, Minnesota. Other dairy breeds: Ed. Carey, Carlton, Oregon.

Beef Breeds

Shorthorns and Aberdeen-Angus: Frank Brown, Carlton, Oregon. Herefords: Wallace Good, Kansas City, Missouri.

Hogs

Duroc-Jerseys and Berkshires: E. J. Barker, Thorntown, Indiana. Poland-Chinas and Hampshires: C. R. Doty, Charlestown, Oregon.

WIRE FROM DEAN H. E. VAN NORMAN AT NATIONAL DAIRY SHOW, CHICAGO

"Hurrah for California. First on certified milk goes to University of California. First on market milk and market cream to Elliott-Brant, whose cream scored 100, first time this high score ever given at National Dairy Show. On City House Department Exhibit Los Angeles gets first. The Pacific Coast gets six out of nine firsts in milk and cream classes. Dupee of Santee won grand champion on Guernsey bull."

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

THIS WEEK'S COVER

One feature of California's rice growing industry is shown on the cover of this issue. In a few years it has increased from the experimental stage to an equal importance with wheat growing. The value of the industry to the state this year will be in excess of $15,000,000.

100 PER CENT MILK

Note the honors thrust upon California and chronicled in the copy of telegram from Dean Van Norman on Page 503. One California dairy has shipped sweet cream across the continent, which two weeks after its production scored 100. "The first time this high score was ever given at National Dairy Show." This cream was produced on the Elliott-Brant Rancho, Owensmouth.

SUCCESSFUL FAIR

President John L. Bishop, Secretary Van Pelt and the entire board of directors of the Southern California Fair Association, which closed a successful five day fair at Riverside last Saturday night, have reason to be highly gratified at the results of this year's exhibition. The association is only some half dozen years old and the first fairs which were held out on Magnolia Avenue were a remarkable contrast to that just closed. The general agricultural exhibit, including the fruits, was a great advance over all preceding fairs, but the most marked advance of all was in the showing of live stock. It demands material extension of the grounds before another show can be held.

LOAD AND UNLOAD

The railroad administration is calling attention to the delay in unloading of products. Much more time than normally is required to transport produce from the Pacific Coast to the East because of congestion, then greater time in unloading calls for nearly doubling the time the car takes in making the round trip. The worst of it is that the car shortage is causing the producer the greatest loss. We call attention to the situation at Lodi where hundreds of cars of grapes were held until the best of the season passed simply because of inability to secure enough refrigerator cars.

The producer can expedite matters at this end by holding the cars in loading as short a time as possible. Still more, Eastern distributing points can aid, for it has been determined by the administration that cars are held in Chicago an average of 4.37 days, while figures on 36 cars at Denver show an average delay in unloading of 6.36 days.

Load and unload quickly.

THE SILLY SEASON

Since the silly season is an open season we direct attention to a plan that is the result of a great burst of intelligence on the part of a Sacramento city official, to wit: A state wide boycott with the announced purpose of bringing down price of eggs and butter is to be organized among the housewives of the state. We forget just how far the price of the above named products is to fall—something like 35 cents for eggs and 40 cents for butter seems to be about right to the worthy official.

We wish him well, this modern Don Quixote, but before he starts out on his program we respectfully refer him to a careful study of the success that attended the original "Don" who sallied forth to do battle with the windmills, and in an effort to arm him well for the fray that he is about to engage in we would like to point out that the prices of butter and eggs are not local matters. The price of eggs is a national and the price of butter an international proposition. But it is hardly probable that this information would deter so dauntless an official accustomed to wrestling with the weighty problems of a municipality. Anyway, he is getting a deal of free publicity—a commodity not held in disdain by those holding office at the hands of the public.

In the meantime our advice to our readers is that they keep on milking the cows and gathering the eggs.

RICHES ACROSS THE BAR

What is to become of the riches which formerly passed over J. Barleycorn's bar? This question gives opportunity for a discussion in "Nation's Business." The confectioners at first claimed that the sale of sweets would be vastly increased because of the fact that sugars are valuable in satisfying the craving for alcohol. The soft drink people, again felt these riches would be theirs. After preliminary research investigators have found that the moneys which were formerly spent over liquor bars will go into other channels in about the order given below. First, the savings banks will be the greatest beneficiary. After the banks come soft drinks and ice cream; third, the movies; fourth, candy, and finally, tobacco.

THE LOS ANGELES LIVESTOCK SHOW

Today the gates open at the Los Angeles Livestock Show, and the event can, and should, be regarded as one of utmost importance to the future of California live stock development, and, indeed, the future welfare of the agricultural and horticultural resources of the state in general and Southern California in particular.

Notwithstanding the fact that Southern California has always maintained an extensive live stock industry, it has been but comparatively recently that serious attention has been accorded the production of pure breds. The marked advance registered the past few years suggests the possibilities in this direction and justifies the prediction that some day—not distant—Southern California will boast of owning many of the best herds and flocks of the Pacific Coast.

The science of modern agriculture has demonstrated no fact with greater certainty than that successful agriculture is based on animal husbandry. And if there be those who doubt this great truth they are certain to have it impressed upon them sooner or later. Rather than wait for this fact to be made plain the lesson learned by older countries should be taken to heart and farming operations ordered accordingly.

Just as science has proven that live stock husbandry is fundamental to a successful agriculture, so has science demonstrated that pure bred and high grade live stock is infinitely more profitable than that of little or no breeding. On our high priced lands of the South only efficient live stock should have a place, and the Los Angeles Livestock Show was designed and promoted in the hope that it would hold out an inspiration to all and develop an appreciation of the part that live stock must play if we are to build a satisfactory and profitable agriculture.

This new institution deserves, and doubtless will be accorded, the hearty support of the territory it is planned to serve. The permanency of the show as an annual affair will depend on the support tendered the initial event, and we venture to predict that the 1919 Los Angeles Livestock Show is but the forerunner of a long series of shows that will bring to expression the degree of live stock consciousness so long looked forward to by those who believe in the greatness of California.

ENTRIES AT CALIFORNIA INTERNATIONAL

Gordon H. True, manager of the California International Live Stock Show, which will be held in the California Building at San Francisco, November 1 to 8, announces that close to 1,000 head of cattle, horses, swine and sheep have been entered and that telegraphic reservations have been made by exhibitors who were not able to get the entries in on closing date. Thomas Mangan, superintendent of the horse show, says that close to 200 head of horses will be entered in this department. The entries for poultry, pigeons and rabbits do not close until October 20. Carlot entries for fat stock close October 18.

Manager Gordon H. True is now trying to crowd the quarters so that he will have sufficient stall and pen space in the big California Building. More than 250 horses will be entered in the night horse show classes, and it is feared that some stock will have to be quartered outside of the building.

The partial list of entries is announced as follows:

Shorthorn Cattle: Henry M. Elberg, Woodland; Ormondale Company, Redwood City; Fair Oaks Ranch, Willits; Alexander and Kellogg, Suisun; Pacheco Cattle Company, Hollister; Leon F. Douglass, San Rafael; Wm. A. Bond, Newark; T. S. Glide, Davis; Thos. Harrison, Santa Rosa; Estate of Thos. B. Dibblee, Lompoc; Thos. T. Miller, Hollister; H. L. & E. H. Murphy, Perkins; University of California, Davis; Caledonia Stock Farm, San Francisco.

Hereford Cattle: J. A. Bunting, Mission San Jose; Harold Rice, Paia, Maui, Hawaii; University of California, Davis; H. M. Barngrover, Santa Clara; W. J. Bemmerly, Woodland; Hereford Corporation of Wyoming, Cheyenne, Wyoming; H. H. Gable, Esparto; Will Henn, Kansas City, Missouri.

Aberdeen Angus Cattle: University of California, Davis; Congdon and Battles, Yakima, Washington.

Holstein Cattle: Frank B. Anderson, Sacramento; Frank Reed Sanders, Phoenix, Arizona; University of California, Davis; A. W. Morris & Sons, Woodland; Henderson Company, Sacramento; R. L. Holmes, Modesto; Napa State Hospital, Napa; Palo Alto Stock Farm, Palo Alto; Toyon Farms, Los Altos.

Jersey Cattle: L. J. Belknap, San Jose; University of California, Davis; Guy H. Miller, Modesto; J. A. Goodall, Keyes; W. J. Hackett, Ceres; M. Fortini, Orland; Frank Reed Sanders, Phoenix, Arizona.

Guernsey Cattle: A. B. Humphrey, Escalon; L. D. Smith, Berkeley.

Ayrshire Cattle: University of California, Davis; J. Henry Meyers, San Francisco; E. B. McFarland, San Mateo.

Dutch Belted Cattle: Frank Reed Sanders, Phoenix, Arizona.

Rambouillet Sheep: University of California, Davis; Bullard Bros., Woodland.

Shropshire Sheep: Butte City Ranch, Butte City; University of California, Davis; J. M. R. Boyd, St. Helena; Vaughan & Fox, Lyons, Oregon.

Hampshire Sheep: Caila Grove Farm, Manteca; University of California, Davis.

Southdown Sheep: University of California, Davis.

Romney Sheep: Coffin Bros., Yakima, Washington; University of California, Davis.

Corriedale Sheep: Ellenwood & Ramsay, Red Bluff; Coffin Bros., Yakima, Washington.

Lincoln Sheep: Coffin Bros., Yakima, Washington.

Berkshire Swine: A. L. Stephenson, Los Molinos; Mrs. John J. Weeks, Yuba City; Frank B. Anderson, Sacramento; Castleview Ranch, Santa Rosa; A. B. Humphrey, Escalon; University of California, Davis; W. F. Sandercock, Sacramento; Anchorage Farm, Orland; Walter E. Graham, Del Paso Heights.

Duroc-Jersey Swine: L. J. Belknap, Jersey Queen Farm, Santa Clara; University of California, Davis; J. H. Rosseter, Burke; Conejo Ranch, Newbury Park; F. M. Johnson, Napa; S. E. Whiting, Sacramento; Harvey Berglund, Dixon; Roy Fisher, Lincoln, Nebraska.

Poland-China Swine: McCarty and Starkweather, San Francisco; University of California, Davis; H. I. Marsh, Modesto; Geo. V. Beckman.

Hampshire Swine: C. J. Gilbert, Lancaster; Roy Fisher, Lincoln, Nebraska.

Chester White Swine: C. B. Cunningham, Mills; University of California, Davis; Oak Knoll Farm, Lakeport.

Tamworth Swine: R. Heckley, Santa Rosa; Dr. Jas. J. Summerfield, Santa Rosa.

Yorkshire Swine: Lloyd and Tointon, Santa Rosa.

Percheron Horses: Merritt-Bowers Company, Tulare; N. W. Thompson, Patterson; Ruth Maxwell, Sonoma; University of California, Davis.

Belgian Horses: Merritt-Bowers Company, Tulare; N. W. Thompson, Patterson.

Shire Horses: Easton and Ward, Diablo; Merritt-Bowers Company, Tulare.

American Saddle Horses: H. C. Ahlers, San Francisco; Merritt-Bowers Company, Tulare.

Thoroughbred Horses: Frankenheimer Bros., Stockton; Ed Cebrian, San Francisco; J. H. Rosseter, Burke.

Standard Bred Horses: Merritt-Bowers Company, Tulare; University of California, Davis.

Arabian Horses: S. C. Thompson, Concord.

In addition to the above the following entries have been made in the different classes, assuring the strongest kind of competition:

Herefords: John H. Cazier & Sons, Wells, Nevada; Charles Rule, Jenner.

Holsteins: Mrs. Annie Donders, Fresno; J. P. Phillips, Fresno; J. W. Scutter Holt; V. F. Dolcini, Davis.

Jerseys: E. F. Smith, Hayward; J. E. Thorp, Lockeford.

Guernseys: W. H. Dupee, Edgemoor Farms, Santee.

Hampshire sheep: Conway Ranch, Woodland.

Berkshires: J. H. Rossiter, Burke.

Durocs: J. E. Thorp, Lockeford; V. F. Dolcini, Davis.

Hampshire swine: Conejo Ranch, Newbury Park.

Percherons: L. A. Hall, Mountain View; Palo Alto Percheron Farm, Palo Alto.

Clydesdales: Estate of Thomas B. Dibblee, Lompoc; E. A. Simpson, Hood.

Toggenburg goats: University of California, Davis.

Anglo-Nubian Goats: Bralef Stock Ranch, Santa Rosa.

Saanen Goats: Bralef Stock Ranch, Santa Rosa.

The Southern California Fair at Riverside

Editorial Correspondence

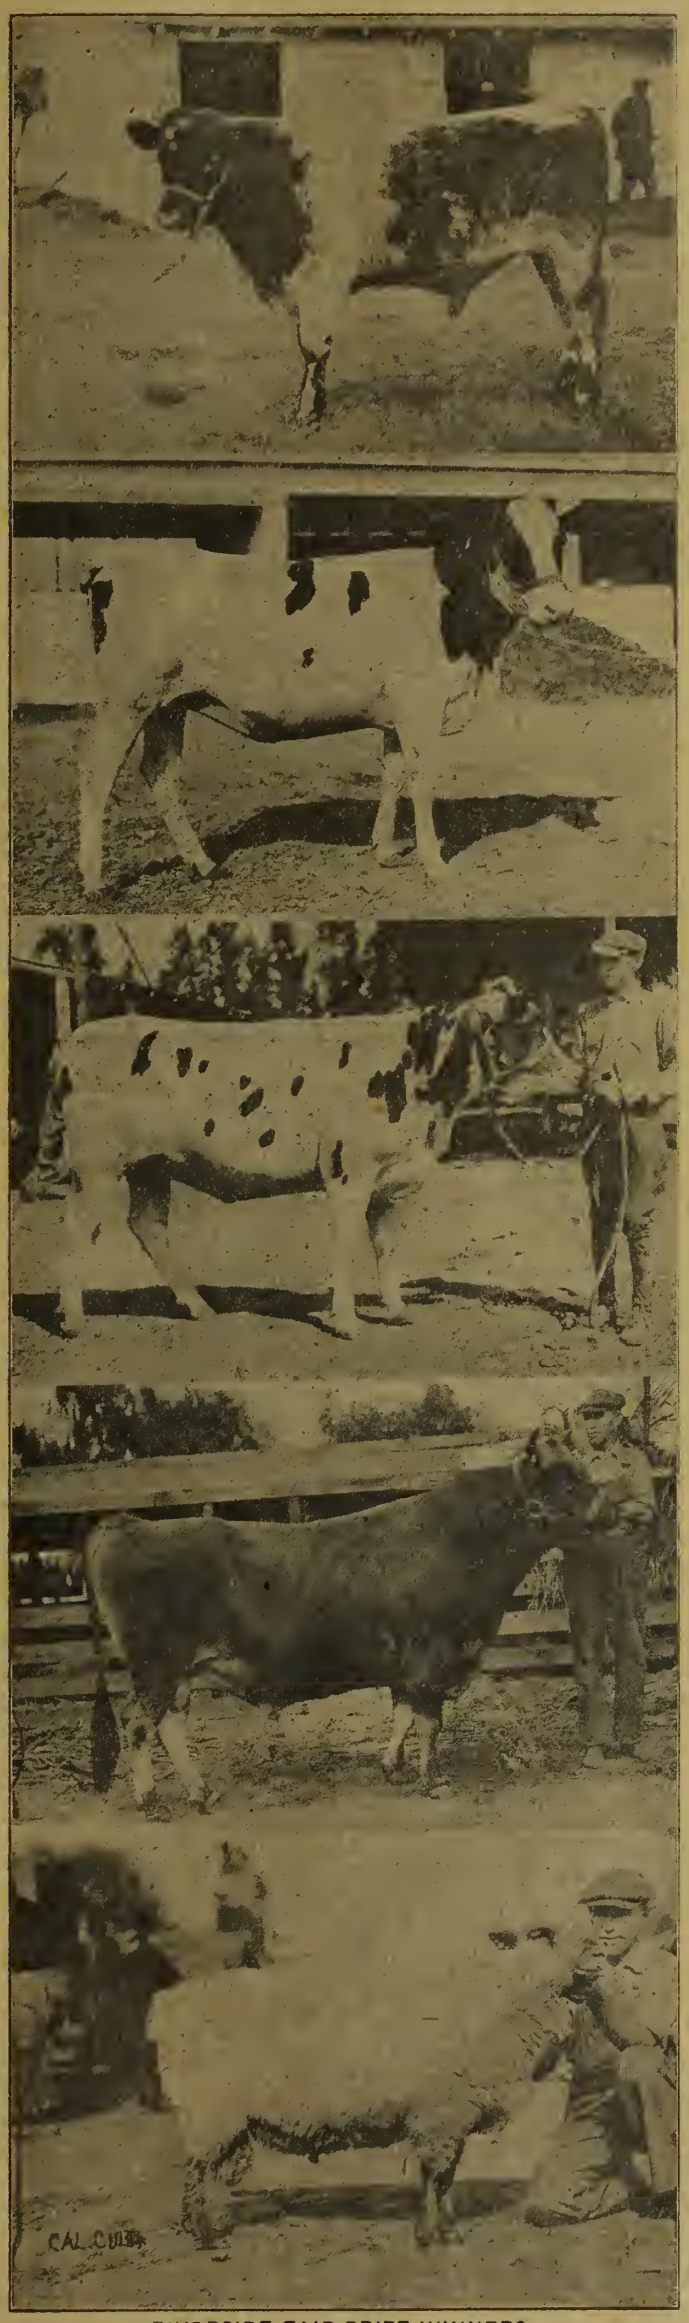
THE management of the Southern California Fair, which closed last Saturday night at Riverside, has occasion to feel highly gratified at the exhibition made of Southern California products and the reception given to the exhibits by the fair going public.

It was really and truly an agricultural fair, and with field crops and general agricultural productions made a far greater showing than most of us supposed was possible. Riverside has the reputation of being the home of the navel orange, and as the first great producer of navel oranges is often considered an exclusively fruit center. Such a fair as that of last week shows the falsity of such an idea. There were booths built of alfalfa, of milo and other sorghum grains, and sheaves of barley, wheat and oats were most generously used in decoration.

If I were to try to pick out the most striking of the exhibits I would have a task, for viewing the magnificent show of pure bred live stock, the exhibit tent of the farm bureaus of the county and that of tractors, trucks and farm implements, one could hardly feel justified in saying this one or that one was the best.

The farm bureau exhibit was wonderfully informing to the members of the bureau, but even more so to those of us who were looking at its activities from the outside. It consisted of demonstrations of methods more than of exhibits of products. The fourth grade object lesson plan of imparting information was followed. If one asked a question as to the dipping vat with sacks of grain ready to plunge into the bluestone, grain storage, milking machines, Babcock test or other more complicated processes, there was always the remark: "This is exactly how we do it." The successful cow with her 10,000 pounds or more of milk and three or four or five hundred pounds of butter fat stood alongside the boarder with a few hundred pounds of milk, or, perhaps a larger quantity of milk with very small fat production. In the next booth was the Babcock test in actual operation, showing to every dairyman who desired to know exactly how the yardstick was applied to the worth of his dairy stock.

To show the advantages of bulk storage of grain the bureau did not put up a placard and say: "It is wise to economize by this method of handling grain," but built an exact model of the $23,000 concrete elevator just completed at Murietta. This elevator has a 33,000 bushel capacity and is saving to the farmers who put up the money for its building all they put into it. J. V. Thompson, president and general manager of the elevator company, was on hand ready to give information as to the method of operating, handling and cleaning the grain and to show that it was absolutely mouse and rat proof and arranged on lines of greatest saving of labor and of preserving grain in best of condition. The company has found in the transportation companies warmest support of this method of handling. One of the greatest single items of savings, described by Mr. Thompson, is in the returns from the screenings and defective grains which are separated from the sound grains and kept in the possession of the company to be sold for low grade stock feeds. In addition to the value of this formerly waste grain there is saved the freight charge on it to the consumer's end of the line.



RIVERSIDE FAIR PRIZE WINNERS

Upper, Avon's Sensation, owned by F. L. Hall, junior champion. Second from top, It Sienpje Korndyke, owned by G. M. Brown, second junior heifer. Another Holstein owned by George Jr. Republic, Ida De Kol Pearl Lyons, winner of first as senior yearling heifer. Fourth from top a great Jersey bull, Walnut Park Noble, senior champion, owned by Geo. W. Thomas & Sons, Shropshire ram U. of C., 530, owned by Thomas & Sons, first and champion.

Both President J. E. Wherrell of the bureau and County Agent R. N. Wilson were in the tent giving information to every inquirer, especially where the inquirer was looking for information as to the advantages to him of becoming a member of one of the local centers. A strong membership campaign is now under way.

Adjoining the farm bureau tent was that of the Southern California Milch Goat Breeders' Association. Three hundred milch goats and kids were exhibited, and the enthusiasm in that tent was catching. The poor man's cow is growing in favor in every section of California.

The big tent which housed the tractor and implement exhibit was humming with activity because of the many motors operating "still" exhibits of tractors and trucks and farm implements. To give a list of the exhibitors in this tent would require much space, but I may say that every need of the farm could be met by selection from the implements and machines there displayed. The farm truck exhibit was perhaps one of the most striking in this great tent. Tractors were likewise shown in all types up to medium size. There were none of the great 75's which have been so much a feature in many tractor demonstrations.

Across the way from this implement tent was the mammoth tent housing general farm products displays. Here also were the county and community feature exhibits. These were not given the artistic setting of similar exhibits at the state fair, but in quantity and quality of products I believe they were fully equal. One of the most educational of the exhibits in this tent was made by the combined beekeepers' clubs of San Bernardino and Riverside Counties. It was a most convincing argument of the magnitude of the industry in those two counties. Of striking interest was the exhibit by Messrs. Kinzie of honey plants of Southern California. These were arranged like botanical specimens and gave a clear idea of the value and number of California's honey producing plants.

Corona, home of the orange and lemon, had an exhibit of alfalfa, milo, and sheaves of grain which surprised the visitor, as did the dearth of citrus fruits. Almost the entire exhibit, which was in charge of Mr. Jones of Corona, was given up to these general agricultural and field crops. Some magnificent dent corn ripened this year was a feature of the exhibit.

The California Date Association came over from the Coachella Valley with an exhibit showing commercial pack of a small portion of its 200,000 pound date crop which it anticipates it will produce this year. There were illustrations of the new 40 by 120 date packing house at Coachella and of methods of preparing fruit for market. The fruit was also exhibited in jams, marmalades, confections and pastes of nearly all kinds. Letters were shown giving analysis of date seed which it is expected to make into stock feed and possibly food for humans.

Continued on Page 508

Agricultural News Notes of the Pacific Coast

Northern California

Yolo County has 310 acres of figs.

Manteca is to have a large broom factory.

The Marysville district is out of bean bags.

Hops bring 75 cents a pound at Santa Rosa.

Chico harvest hands receive from $5 to $8 a day.

Alameda County has 13 large canneries operating.

Ungraded rice threshed last week at Colusa sold from $6 to $6.25.

The Orville cannery averages 50,000 cans of tomatoes daily.

Sonoma County grapes are going East at $30 or better a ton:

Rice fields are suffering damage from ducks in Glenn County.

Last week a site for a new cannery sold in Oakland for $150,000.

Rain and fog is delaying the bean harvest in northern counties.

The famous Hooker oak near Chico is under treatment by a tree surgeon.

The big new rice mill at Colusa will start on October 20 with 100 employes.

A 750 tract of rice land in Colusa County was sold for nearly $100 an acre.

The estimate of Butte County's hop crop is 5,500 bales, worth $1,000,000.

Pears from the Stennett orchard in Nevada County brought $6.20 a box in New York.

Sacramento's municipal garden of 30 acres brought in $3,000 in tomatoes this year.

Purple vetch seed is in great demand in the northern counties at 15 cents a pound.

From the Sacramento delta district 300,000 sacks of potatoes have reached Sacramento by river boats.

For the first time in history a carload of wheat was shipped from Auburn, Placer County, last week.

The Humphrey's vineyard, in Sacramento County, last week shipped a car of Tokays to Havana, Cuba.

Sutter County has just secured 1,000 seedling peaches of the wild Chinese peach resistant to alkali.

A shipment of 4,000 bales of hops to England, valued at $500,000, is being made from the Sacramento Valley.

Rice growers in the Sacramento Valley are seeking to hire 20 airplanes to drive ducks away from the fields.

Grape growers in several districts in Napa County have sold their crop to an Eastern buyer for $28.50 a ton.

Glenn leads the rice counties with a $9,000,000 crop. Colusa is second with $8,000,000, and Butte third with $5,000,000.

The Northern California Milk Producers' Association is filling an Eastern order for $390,000 worth of powdered milk.

The California Fruit Distributors of Sacramento has sent forward 18,000 carloads, with 10,000 more, principally grapes, to go.

A state committee of 55 met at Stockton September 29 and adopted a strong anti-Japanese program regarding land owning.

D. H. Elmore, Tulare, got 600 sacks of barley from 20 acres, then put in field corn and sold it standing for $1,500. Good double cropping.

Central California

Kern County has 2000 acres of cotton.

Pixley is to have a eucalyptus lumber mill.

Sacramento County leads the state in pear production.

The Turkish sweet potato plant employs 115 persons.

Turlock has a jelly farm where six acres of roselle are grown.

A 32-acre orange grove at Lindsay, 11 years old, sold for $40,000.

The ten year old beet sugar factory at Turlock was moved to Utah.

The Emerzian 80 acre vineyard at Tulare paid $312.50 an acre this year.

The average potato yield in San Joaquin County is 80 bushels to the acre.

The Covell ranch of 225 acres of grapes near Modesto sold for $600 an acre.

Dinuba's Chinatown, recently destroyed by fire, is rapidly being rebuilt.

The Carnation Milk Company will build a condensary at Gustine, Merced County.

In three infested townships, Merced County is cleaning out the Russian thistle.

The Fresno Turkish Tobacco Company is the latest combination of growers.

A dozen Merced County dairymen have paid fines for not properly cooling milk.

The Merced-Stanislaus Sweet Potato Growers Association now has 225 members.

Reports throughout Central California are to the effect that hog prices are dropping.

The Wilson tract of 1200 acres near Dinuba is offered the state for a land colonization scheme.

The Alta district of Tulare County has an usually heavy tonnage of extra fancy cluster raisins.

At Grass Valley 100 head of cattle sold at auction, the highest price being $9.50 per hundred.

A million dollars a year for three years will be spent for advertising by the California rice growers.

At the Hanford Poland China sale of Haag-Bernstein, a boar sold for $570 and sows averaged $189.40.

It is estimated that 40 per cent of the state's peach crop is grown in Fresno, Kings and Tulare Counties.

One almond tree on the Schultz place at Terra Bella, Tulare County, yielded 95 pounds of nuts; sold for $28.50.

The Central California Cantaloupe Company, composed of about 20 Japanese growers, shipped 275 cars from 650 acres.

A new evaporator near San Jose dried grapes in 12 hours, apricots in six hours, and plums in nine hours, all in fine condition.

R. L. Nougaret, our official viticulturist, has been making a survey of vineyards in Sonoma County with Commissioner Bremner.

An Italian near Lodi, before and after working hours, cared for an acre and a half vineyard of Tokays and sold 750 crates at $2 each, or $1500.

Southern California

Hemet has a new broom factory.

Colton has secured a park site of 14 acres.

Cotton ginned in Blythe to October 1 was 1100 bales.

Oxnard lemons sold at Boston last week at $9.50 a box.

Brawley shipped eight carloads of cattle on October 1.

Seed barley in Southern California is bringing $100 a ton.

San Bernardino County will build an insectary at Upland.

The ten acre Spittler orange grove at Yorba Linda sold for $38,000.

Yucaipa is sending 10,000 boxes of apples to the cannery at Wineville.

Japanese raise 85 per cent of the melon crop in the Imperial Valley.

The Imperial Valley will have a honey crop for 1919 of 20 carloads.

The California Avocado Association meets at Santa Barbara, October 24-25.

A cloudburst cut off Palo Verde Valley from the outside world for a full week.

The Tri-Counties Reforestation Committee will meet at Anaheim October 9.

The Lima bean growers met at Oxnard October 6 and set the price at 14½ cents.

T. R. Canady, a jeweler at Santa Ana, sold $360 worth of vegetables from his city garden.

W. F. Bollinger, Pomona, has had a seedless fig crop on one tree for many years.

The Monrovia-Duarte growers have choice of three railways, therefore no car shortage.

Irwindale, Los Angeles County, shipped 102,624 boxes of citrus fruits the past year.

Mrs. Pachita of Hemet earned $60.20 last week for cutting peaches in the local cannery.

A few Ventura bean ranches bore a heavier crop this year than last. All were irrigated.

A Newhall apricot tree is 62 inches around three feet above ground, planted in 1883.

Mexican cotton pickers to the number of 2,000 have crossed the line into Imperial Valley.

The Yucaipa apple packing house is handling only Delicious and Rome Beauty at present.

Last week $2250 an acre was paid for 35 acres in walnuts near Mound City in Ventura County.

Orange County walnut growers want the school children to pick nuts; the school authorities say no.

The last tunnel on the San Diego-Arizona railway is being finished. Trains will start December 1.

Pomona growers complain of walnuts dropping. Some blame foggy nights; some blame red spider.

The West Ontario Citrus Association received one-half more money this year than any previous year.

Three ranchers at Blythe were taken to court last week for allowing Johnson grass to seed on their lands.

Early table grapes will be planted in both Coachella and Imperial Valleys, as they ripen earlier than elsewhere.

The Coast and General

Oregon's potato crop will be short this year.

Hay in Klamath County, Oregon, is $35 a ton.

The Idaho honey crop is estimated at $270,000 a year.

Oregon expects to yield a 1919 prune crop of $40,000,000.

Every part of the United States reports a car shortage.

A 160 acre ranch at Chandler, Arizona, sold for $425 an acre.

The cherry crop of The Dalles, Oregon, district totaled 1,000 tons.

Wheat on the Hill farm at Peoria, Oregon, yielded 45 bushels an acre.

The 1919 grain crop of Umatilla County, Oregon, is worth $9,000,000.

A 1,200 acre orchard in Okanogan Valley, Washington, sold for $50,000.

Growers of peaches are hauling them 50 miles into Portland, Oregon.

There is a heavy demand for wild blackberries at Bellingham, Washington.

The 210 acre Nelson ranch at Chandler, Arizona, sold for $400 an acre.

Lane County, Oregon, has 8,000 acres of corn, 2,000 more than last year.

Two carloads of Bear Creek, Oregon, pears sold in New York for $3.85 a box.

Wenatchee Valley, Washington, has shipped 2,500 cars of Jonathans this season.

A moth borer has destroyed the seeds of Acacia Koa in the Hawaiian Islands.

California-Arizona cotton growers are receiving about $195 an acre for their crop.

A potato grower at Nampa, Idaho, made $10,000 net profit from a rented 40 acre farm.

The lower Yakima Valley, Washington, reports a heavy apple loss through a hard windstorm.

A. J. Stevens, Cottage Grove, Oregon, has picked 13 tons of string beans from three acres, bringing him $1,700

Hood River, Oregon, vinegar factories offer $10 a ton for cull apples after the "cookers" have been sorted out.

The first cannery in Grays Harbor County, Washington, began operations recently at Montesano on wild blackberries.

Sanderson Brothers of Yakima paid $40,000 for a 30 acre apple orchard in 1914. This year the crop sold for $40,000 and the orchard has paid well every year.

Work on the concrete highway between Tempe and Mesa, which is a continuation of the concrete highway between Phoenix and Tempe has again between Phoenix and Tempe, has again five or six months.

At the International Soil Products Exposition at Kansas City, September 24 to October 4, Maricopa County was awarded first premium for county exhibits and several special prizes. A number of individual prizes were also won by Arizona farmers, among them being first prize for American long staple cotton, dwarf milo and alfalfa hay. Among the states' exhibits Arizona won second prize for best general display.

Standardization Law a Success

By Ernest Braunton

THE 1919 standardization law in regard to fruits and nuts is a grand success and is in general running very smoothly. In the larger commercial centers very little trouble is experienced by the officials; in the more rural districts conformation to legal requirements is more slowly made, but all will finally cooperate to raise the standard of the earth's products. Nearly all growers and packers welcome the enforcement of the law, for it elevates the business and places all on a common level.

The writer recently made the rounds of Los Angeles fruit stalls to the number of about 50 and visited the mammoth city market with County Horticultural Commissioner Ryan, Market Inspector Shepherd and State Inspector Taylor. Very little trouble was experienced on the trip and good nature prevailed even when some handlers of fruits were "called down." It is the policy of both county and state officials to be very lenient, kind and courteous to all first-time violators of the law. They are plainly shown wherein they are delinquent and warned against a recurrence of the delinquency. After that subsequent infractions are more severely dealt with.

The apple standardization law is a separate enactment and is a little more strict in its requirements than the one covering produce in general. But it is the one that is most nearly complied with. It is quite evident that all growers and packers of large amounts have sought to meet every requirement, and those falling short do so through ignorance. The law states that every box of apples must be labeled with the grower's or packer's name and place of business, the name and grade of apples, and the net weight or number of apples contained in the box. Some fall short in one or more provisions, as the following example will show; the name of packer only is changed. On the end of the box is a typewritten paper pasted on which read the following lines, from top to bottom: "Delicious." "A. N. Greeley, Yucaipa, Cal." "Sept. 30, 1919." "Net weight 30 pounds or more." The grade or brand is not given, though the law requires it.

Pears, plums, peaches and prunes are usually well up to the standard when coming from a packing house or large grower, but considerable trouble is experienced with local growers who haul their produce to market in open lug boxes. The local authorities have induced nearly all of this latter class to adopt a card system. On every box a card is tacked, containing the grower's name, the name of the produce and the net weight. The cards are small, the size of an ordinary business card. One local firm of growers has its name printed on the lower half of card thus: "Smith, Jones & Co., Montebello, Cal." On the upper half, one below the other, are the names of three commodities they grow: "Tomatoes, Potatoes, Sweet Potatoes." Before each name is a blank space for grade or name of variety and after each name a space for the net weight. This is far superior to stamping with a rubber stamp, for as boxes get old and dark colored or dirty the stamp cannot be read, and it could not truthfully state the contents of the box, for the latter varies in kind and weight. Officials are much pleased to find that nearly all handlers are adopting the card system. Large firms buying produce in the field send the cards out with the driver or packer and they are tacked on and filled out before the boxes leave the field.

The rubber stamps used on apple and other boxes are almost useless, for the reason that they cannot be read. The writer counted 43 boxes before he found one on which he could read every word. This is largely owing to the roughness of the wood, but the stamper has so many to decorate that it can hardly be done properly. A blank space for the stamp should be left on each label, which would then be made plain to all. For this reason the writer believes the law should be amended, setting forth the size and style of label, what it should contain and where the blank should be left for stamp. All three of the officials interviewed were heartily in favor of such a measure. When asked as to confiscations, they stated they never seized fruit at first infraction of the law, but after one warning, the offender had his fruit sent to an orphan asylum or other charitable institution, with the compliments of the county or state. It has seldom been found necessary to force such generous action on a grower the second time. One fault noticed on many boxes is that a fancy label is on one end, with all legal requirements printed thereon that could be printed and the net weight or number stamped on the other end. All should be on the label end of box.

Reports from Central California show that more tobacco will be planted next year and more tobacco factories erected.

FARMERS ADOPTING TRAILERS

Many farmers and fruit growers are finding the trailer or semi-trailer one of the most useful pieces of farm equipment. The light two wheel and four wheel, high speed trailer is used with runabouts and touring cars for hauling small quantities of farm products to market which otherwise would go to waste or be fed to live stock. Too much time would be lost if these small lots were taken to market with horse and wagon, but a round trip to town with the family car and a trailer loaded with a few hundred pounds or half a ton can be made in a couple of hours or less. Produce handled in this way includes milk, butter, eggs, live poultry, fruit, vegetables and even live pigs, calves and cows. The car is used at other times without the trailer for all customary purposes.

Semi-trailers are used extensively where there is more and heavier hauling to do. Loads of two to three tons are carried on semi-trailers with runabouts and touring cars. The rear deck of the runabout or the body of the touring car back of the front seat is removed and a fifth wheel device bolted into the frame over the rear axle. The front end of the semi-trailer is attached to and supported by this fifth wheel. Weight of the load is thus divided between the automobile and the two wheels of the semi-trailer. The trailer is detached whenever desired.

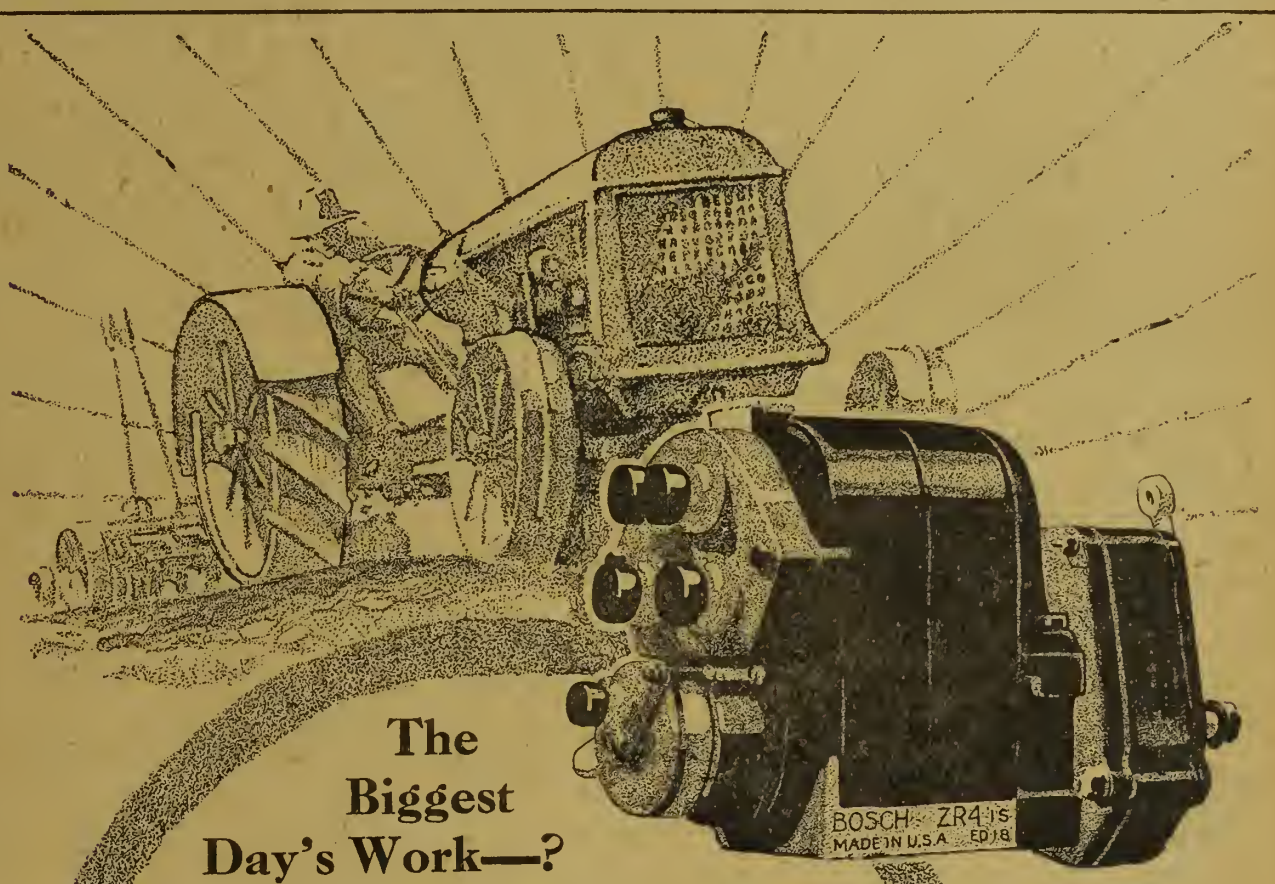
Small farmers find that trailers and semi-trailers, used with their automobiles, often serve all their hauling needs. Says a cattle breeder in Arizona who has hauled a two wheel trailer 15,000 miles behind his light runabout and has not had an outlay of more than $15 on the trailer:

"I have carried cows, calves, bulls up to a ton weight; lumber, grain, large trees, wood, coal and many other things used on my farm. Such a vehicle is indispensable to me and I think would be more generally used by farmers if they realized the many uses the trailer can be put to."

AGE LIMIT

"Don't you think I am too old to dance these new jazz steps?"

"No," replied the man who expresses himself positively. "Anybody is young enough to dance 'em who isn't old enough to know better."



The Biggest Day's Work—?

At sundown—is your tractor still going strong—has it done the biggest day's work that a tractor can do? Does the engine pull to capacity every minute of every day?

Tractor performance is largely governed by ignition. It is a proven fact that the searching strain of farm work necessitates magneto ignition. And in Bosch Magneto Ignition, magneto dependability reaches its greatest development.

With Bosch High Tension Magneto Ignition, hot, intense Bosch Sparks flash to the plugs—accurate to the thousandth of a split second. Whether you burn kerosene, distillate coal oil, tops or gasoline in your Tractor, Truck, Automobile or Gas Engine, Bosch Sparks get every atom of power from the fuel. Bosch Economy and Bosch Dependability have been proved through years of Supreme Service.

Get a convincing demonstration of Bosch Superiority from your dealer. Every dealer is backed by the Bosch Service Organization. Over 200 Service Stations in more than 200 centres are always ready to give you complete service.

SOUTHERN CALIFORNIA FAIR

Continued from Page 505

Riverside County's exhibit made little attempt at artistic design but was a great display of general farm products. Elsinore had a most attractive booth featuring the brick and clay products industry of that section. Of course grapes and practically all fruits were also striking features in this exhibit. Arlington, Moreno, Banning, Beaumont, Northside, Hemet and other communities of Riverside County had individual and most creditable exhibits.

The most striking arrangement of displays was that made by Orange County in charge of Mr. McDannald. Walnuts naturally were most in evidence and there was a large exhibit of semi-tropical fruits little known and yet to be proven out in this state. There were cherimoyas, sapotas, bananas, feijoas, and many varieties of avocados. The San Diego back country exhibited butter "beans" some yards long, sugar beets, oats and other grains. Here again the agricultural end of the county's productions predominated.

RIVERSIDE LIVE STOCK EXHIBIT

By T. J. Hitte

OUTSIDE what might be termed the "big league" fairs and live stock shows of the Pacific Coast country the live stock exhibit at the Southern California Fair at Riverside, October 7-11, easily holds the record in number of entries, in diversity of breeds and in the average high tone of the general line of exhibits.

Riverside is no longer a mere feeder for other big shows. Her live stock feature is a tub standing squarely on its own bottom. She commands a field that is unique in the more than promising character of its live stock interests, and she has played a winning hand early in the day in catering to the development of those interests through a quick and substantial recognition of their importance to the upbuilding of a well balanced system of agriculture.

The fair called forth a line of draft horse exhibits that is one of the surprises of the season. The principal competition lay between the fine exhibit from F. L. Hall's "Rosecrest" establishment at Perris and that from the Merritt-Bowers stud at Tulare.

The Shorthorn feature of the show was likewise largely dominated by fine lines of exhibits from the Rosecrest herd and the Tagus Ranch. The Herefords were represented by the H. D. Ogden herd at Alpine. In the Holstein section there were five well defined angles to the competition. The Burr Farm herd, Los Angeles; Stalder Bros.' herd, Riverside; George Junior Republic herd, Chino; Tampton Bros.' herd, Artesia; and the E. R. Stalder herd at Nuevo.

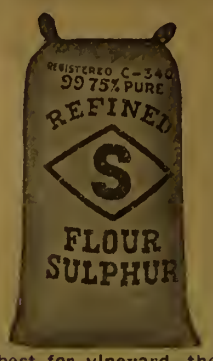
The Jerseys were represented by the J. E. Wherrell herd of Riverside; the Grant A. Brown herd from Eastmont Farm, El Monte, and the Golden Glen herd, owned by Geo. W. Thomas & Sons at Arlington Station, Riverside.

Hollow Hill Farm, Colton, had full sweep in the Gurensey section, with a line of exhibits, however, worthy of world competition.

In the swine department popular interest was supreme. The Duroc section was of a character not to be outclassed this side of the big Middle West shows. While the more pretentious show herds from Winsor Ranch, Bonita, San Diego County, and Diamond Bar Ranch, Los Angeles County, were in the ascendency as to numbers, to say the least, it was evident that there were present numerous formidable competitors from all points of the compass, such as Fallfadale Farm herd, Perris; Ireland Ranch, Owensmouth; Hewitt Bros., Van Nuys; Charnock Ranch, Hemet; H. S. White, Chino; J. S. Prendergast, San Bernardino; W. M. Taylor, San Bernardino; C. F. Myers, Lankershim; W. Moore, Fallbrook, and C. F .Mitchell & Son, San Diego.

The Hampshire section had fine displays from the Gordon & Langdon herd at Perris, the C. J. Gilbert herd at Lancaster and the Fairbanks Ranch herd at Redlands. It was one of the

SULPHUR



It has been proven and so recommended by the University of California that if you sulphur your grape vines and orchards SIX times they will not be affected by MILDEW or RED SPIDERS.

ANCHOR Brand Velvet Flowers of sulphur, also EAGLE Brand, Fleur de Soufre, packed in double sacks, are the fluffiest and PUREST sulphur that money can buy; the best for vineyard, the best for bleaching purposes, LEAVING NO ASH.

VENTILATED sublimed Sulphur—Impalpable Powder, 100 per cent pure, in double sacks, for Dry Dusting and making Paste Sulphur.

For LIME-SULPHUR SOLUTION, use our DIAMOND "S" BRAND REFINED FLOUR SULPHUR. We can furnish you this sulphur at such a low price that it would pay you to mix your own solution and net you a profit equal to the amount paid out for labor in spraying your orchard, even if you pay your men $4 per day for making the solution and applying same.

To create additional available plant food, drill into the soil 100 to 400 pounds per acre DIAMOND "S" BRAND POWDERED SULPHUR 100 per cent pure. This has increased various crops up to 500 per cent.

Also PREPARED DRY DUSTING MATERIALS, Tobacco Dust, Dusting Sulphur Mixtures, etc.

And "Anchor" Brand Standard LIME-SULPHUR SOLUTION 33 DEGREES BE., Fungicides and Insecticides.

Carried in stock and mixed to order.

San Francisco Sulphur Co.

624 California Street. San Francisco, Calif.

We are equipped to make immediate shipments. Send for "ILLUSTRATED BOOKLET," also booklet "NEW USES FOR SULPHUR", Price List, and Samples.

Please state for what purpose you use the sulphur, quantity needed, and date of shipment preferred.

The New 16 Valve

TWIN CITY

12-20 Kerosene Tractor with 16-valve engine

Pays Big Dividends

For the first time in the history of the tractor industry, the 4 cylinder, 16 valve engine (valve in head type) is now applied to a tractor. The TWIN CITY 12-20 with its 16 valve motor actually develops 25 per cent more than its rated horsepower.

This new 12-20 is a light weight tractor that will out-pull, out-last and out-dividend other tractors of equal rating.

Not built down to a price, but built up to a fixed ideal—to do the work assigned to it better than it has ever been done before.

The highest grade tractor will unfailingly prove the least expensive and pay the biggest dividends.

finest displays yet seen on the coast.

In the Poland-China division there were excellent exhibits from H. B. Peake's "Poland-China Farm" at San Bernardino, from the H. Christiansen headquarters at Arlington Station, as well as smaller displays from the herds of Burton C. Platt at Eagle Rock and the Italian Vineyard Co. at Guasti.

The Berkshire brought forth displays from F. L. Hall's Rosecrest Farm at Perris and from the Italian Vineyard Co. herd at Guasti.

There were about 300 goats on exhibition, accentuating the fact that Southern California is one of the greatest goat produoing sections of the world.

Following is full list of awards. Prof. J. I. Thompson of the University of California placed the awards in the Duroc-Jersey classes, while all other swine classes were judged by Walter T. Gatton of Pomona. F. H. Scribner of Los Angeles and Dr. L. M. Hurt of Pasadena officiated in cattle classes.

HORSES

Percherons

Exhibitors: Merritt & Bowers, Tulare; J. J. Prendergast, Redlands; George A. Carter, Perris; W. E. Galwas, Riverside; F. L. Hall, Perris; E. R. Stalder, Nuevo.

Stallion 4 or over—1, Merritt & Bowers on Paicines Padre; 2, Prendergast on Loussett; 3, Merritt & Bowers on Inquiet; 4, Merritt & Bowers on Palo Alto Prince; 5, Carter on Garmon.

Stallion 3 under 4—1, Merritt & Bowers on Woodland; 2, Galwas on Restraint.

Stallion 2 under 3—1, Merritt & Bowers; 2, Hall on Baronet.

Mare 6 or over—1, Hall on Rosalia; 2, Hall on Berna.

Mare 2 under 3—1, Hall on Miss Fontana; 2, Hall on Rosena Lady.

Mare 1 under 2—1, Hall on Miss Hall; 2, Hall on Miss Led; 3, Stalder on Agnes.

Champion stallion any age—Merritt & Bowers on Woodland.

Champion mare any age—Hall on Miss Fontana.

Stallion and three of his get, either sex—Hall on Castillion; 2, Hall on Baronet.

One stallion and four mares, any age—Hall.

Five stallions owned by exhibitor—1, Merritt & Bowers on Woodland and four others.

Specials by Percheron Society of America: Stallion 3 yrs. or over bred and owned by exhibitor—Merritt & Bowers on Woodland. Stallion under 3, bred and owned by exhibitor—1, Merritt & Bowers on Colon; 2, Hall on Baronet. Champion stallion, bred and owned by exhibitor — 1, Merritt and Bowers on Woodland. Mare 3 years or over, bred and owned by exhibitor—Hall on Rosalia. Champion mare, bred and owned by exhibitor—Hall on Rosalia. Get of stallion, 3 colts, either sex of same stallion, American bred—Hall on stallion Castillion; colts, Miss Fontana, Rosena Lady, Miss Hall. Produce of mare, two colts either sex, American bred, produce of same mare—F. L. Hall on mare Rosalia, colts Molly and Berna. First champion stallion—Merritt & Bowers on Woodland. Reserved stallion, open class—Merritt & Bowers on Cadet of Paicines. Champion mare, open class—F. L. Hall on Rosalia.

Clydesdales

All awards Merritt & Bowers, Tulare.

All awards Merritt & Bowers.

Shires

All awards Merritt & Bowers.

Grade Farm Horses

Exhibitors: Hall Brothers, Winchester; Falfadale Farms, Perris; W. E. Galwas, Riverside; Newport Estate, Ethanac.

4 and over—1, Hall on Fagus; 2, Hall on Berna; 3, Falfadale on Eukeiele.

3 years old—1, Galwas on Queen.

2 year old—1, Falfadale on Prince; 2, Newport on Nancy Hanks.

1 year old—1, Falfadale on Ruby; 2, Falfadale on Bird; 3, Newport on Nancy.

Less than 1 year—1, Hall on Bob; 2, Falfadale on Sam.

Mare with two of her colts— Falfadale on Beauty, Sam and Ruby.

Sweepstakes, best mare or gelding—1, Hall on Fannie; 2, Falfadale.

Brood mare with colt at side—1, Hall on Fannie; 2, Falfadale on Beauty and Sam.

Heavy Draft Horses

Exhibitors: Merritt & Bowers, F. L. Hall, Fred Newport, Ethanac.

Draft Team

Best two-horse team, each horse 1600 lbs. or over—1, Merritt & Bowers on Cricket and Victoria; 2, Hall.

Best two-horse team, each horse under 1600 lbs.—1, Newport.

Best four-horse team, each horse 1600 lbs. or over—1, Merritt & Bowers; 2, Hall.

Mules

Matched span, 3 or over, California bred—1, Merritt & Bowers on reds; 2, Merritt & Bowers on blacks.

Under 1 year—1, Hall Bros on jenny; 2, Falfadale Farm on jack.

Jack Stock

Jack 4 or over — 1 and 2, Merritt & Bowers, Tulare.

Jack 3 and under 4—1, Merritt & Bowers on General Pershing.

Standard Bred Horses

Stallion 4 or over—1, Merritt & Bowers on Varcoe.

Mare 2 yrs. old—1, Frank Rees, Hemet, on Uva.

CATTLE

Holsteins

Exhibitors: Frampton Bros., Artesia; George Jr. Republic, Chino; W. C. Lookingbill, Riverside; Stalder Bros., Wineville; Burr Farm, Los Angeles; E. R. Staider, Nuevo; C. C. Buford, Riverside; George A. Smith, Corcoran.

Bull 3 and over—1, Frampton on Segis Pontiac De Kol Burke; 2, George Junior Republic on Dicter Spofford Korndyke Lad 5th; 3, Lookingbill on King Kasteleinje Hengerveld.

Bull 2 and over—1, Stalder on Rosamaine's Pontiac Netherland.

Bull, senior yearling—1,Burr Farm on Sir Manuel Korndyke.

Bull, junior yearling—1, E. R. Staider, Nuevo, on Rosamaine's Pontiac Ormsby; 2, W. C. Lookingbill on Paola Count Segis.

Bull, senior calf—1, George Junior Republic on Republic Tuebie Korndyke; 2, Stalder Bros. on Rosamaine's Pontiac De Kol Keeva; 3, Stalder Bros. on Rosamaine's Pontiac Jean.

Bull, junior calf—1, Burr Farm on Paul Veeman Korndyke; 2, Stalder Bros.; 3, Lookingbill on Paola Gold Leaf.

Cow, 3 and over—1, Burr Farm on Durmella 2nd; 2, Burr Farm on Topsy Clothilde Hengerveld; 3, Buford on Georgia Pontiac.

Cow, 2 and over—1, Lookingbill on Alta Rosabelle Korndyke; 2, George Junior Republic on Snowflake of Juliana of Rock; 3, Stalder Bros. on Rosamaine's Artis.

Heifer, senior yearling—1, George Junior Republic on Ida De Kol Pearl Lyons; 2, Stalder Bros. on Rosamaine's Pontiac Cold Drop; 3, Burr Farm on Duchess Ormsby Ladivale.

Heifer, junior yearling—1, Staider Bros. on Rosamaine's Johanna's Mercedes; 2, Burr Farm on Lt. Seempje Korndyke; 3, Geo. A. Smith.

Heifer, senior calf—1, Frampton Bros. on Vara Mia Pontiac; 2, E. R. Stalder on Aralia Rowena Princess; 3, Burr Farm on Dorthia Witle.

Heifer, junior calf—1, Burr Farm on Veeman Bendoni; 2, George Junior Republic on Victory Pontiac Maid; 3, Burr Farm on Veeman Pontiac.

Senior champion bull—Frampton Bros. on Segis Pontiac De Kol Burke Clyde.

Junior champion bull—George Junior Republic on Republic Tuebie Korndyke.

Senior champion cow—Burr Farm on Durmelia 2nd.

Junior champion cow—Stalder Bros. on Rosamaine's Johanna Mercedes.

Best Bull — Frampton Bros. on Segis Pontiac De Kol Burke Clyde.

Best cow—Burr Farm on Durmelia 2nd.

Aged herd—1, George Junior Republic; 2, Stalder Bros.

Young herd—1, Stalder Bros.; 2, Burr Farm; 3, George Junior Republic.

Calf herd — 1, Burr Farm; 2, Stalder Bros.; 3, George Junior Republic.

Four animals either sex, get of one sire—1, Frampton; 2, Stalder.

Two animals either sex, get of one sire—1, Stalder; 2, Burr Farm.

Shorthorns

Exhibitors: F. L. Hall; Frank E. Collier, Wildomar.

Bull, 3 and over—1, Hall, Perris, on Knight's Crown.

Bull, 2 and over—1, Hall on Bryant's Knight.

Bull, junior yearling — 1, Collier on Orange Flash; 2, Hall on Knight's Archer.

Bull, senior calf—1, Hall, red; 2, Hall, roan.

Bull, junior calf — 1, Hall on Avon's Sensation; 2, Hall on Avon's Type.

Cow, 3 and over—1, Hall on Calla Blossom; 2, Hall on Moss Rose.

Cow, 2 and over—1, Hall on Barbara's Red Rose; 2, Hall on Bartlett Herd Queen.

Heifer, senior yearling — 1, Collier on Palomar Maid; 2, Hall on Betsy Lady Warren.

Heifer, junior yearling — 1, Hall on Aline.

Heifer, senior calf—1, Collier on Palomar Lil; 2, Hall, Red; 3, Hall, Roan.

Heifer, junior yearling—1, Hall on Mina Anne; 2, Hall.

Senior champion bull—Hall on Knight's Crown.

Junior champion bull—Hall on Avon's Sensation.

Senior champion—Hall on Calla Blossom.

Junior champion cow — Hall on Mina Anne.

Best bull—Hall on Avon's Sensation.

Best cow—Hall on Calla Blossom.

American Shorthorn Breeders' Association Special Prize: Champion Shorthorn bull over 12 months, owned by exhibitor in this district—Collier.

Reserve champion bull over 1 year old—Hall on Knight's Crown.

Champion cow or heifer, any age—Hall on Calla Blossom.

Aged herd—Hall.

Young herd—Hall.

Calf herd—Hall.

Four animals, either sex, get of one sire—1, Hall on Avon's Glory; 2, Hall on Knight's Avon.

Two animals, either sex, get of one sire—Hall.

Guernseys

Exhibitors: Hollow Hill Farm, Colton; W. P. Hodge, Hinkley; W. C. Lookingbill, Riverside.

Bull, 3 and over—1, Hollow Hill Farm on King of Hollow Hill Farm.

Bull, 2 and over—1, Effie's King of Hollow Hill Farm.

Bull, junior yearling—1, Topper Langdon of Hollow Hill Farm.

Bull, senior calf — 1, Hodge on Carl Master of Hollow Hill Farm; 2, Lookingbill on Hidden Valley of Arcadia; 3, Hollow Hill Farm on Devel E. King of Hollow Hill Farm.

Bull, junior calf — 1, Lookingbill on Pable Desire Jacker; 2, Hollow Hill Farm on Counsel Langdon of H. H. F.; 3, Hollow Hill Farm on Ruben King of H. H. F.

Cow, 3 yrs. and over—1, Hollow Hill Farm on Imp Fan of Brickleigh; 2, Hollow Hill Farm on Imp Brittle Mistletoe;

AN ENTIRELY NEW MODEL

The New

GRANT SIX

The new Grant is now being exhibited in the show rooms of Grant dealers throughout the country. It is a larger, handsomer and more powerful car than any previous Grant. In it is embodied the fruits of our experience in building over 50,000 light sixes.

It is a beautiful car. Those who have seen it say it is the world's handsomest light six. We make no comment beyond the statement that we are sincerely proud of this model. We hope you will see and judge it for yourself.

With the speedy rakish lines of a fine sport model, the body combines the roomy comfort of a full five passenger touring car.

The upholstery is in genuine leather, trimmed at the edges with leather covered moldings. Top is of Neverleek. Steering wheel is 18 inch notched mahogany and carries both spark and throttle control. Instrument board is mahogany finished. Tool kit is carried in left front door. Equipment includes an engine driven tire pump and a Boyce Motometer.

The overhead valve motor will take this car as fast as most men dare to drive. It is exceptionally quiet, flexible and responsive.

Naturally you will expect a fine chassis. You will find the Grant Six is a model of clean cut engineering. It is built to give satisfactory service—it is built to stand up and last. It is built wholly from the standpoint of quality and service.

We will be glad to send you descriptive literature with full specifications but, we suggest that you see the new Grant Six at your earliest opportunity and find out all about it at first hand.

Harvesting Apples

In Bulletin 1080 prepared by the department of agriculture, "Preparation of Barreled Apples for Market," there is a fund of information regarding harvesting which may be of interest to Pacific Coast horticulturists. Barreling hardly has interest in a box apple section, but from the harvesting suggestions we quote:

In harvesting the crop it is generally advantageous to use both sacks and baskets, as the latter are especially convenient for gathering fruit near the ground, while the sacks can be used to advantage for ladder work, as the pickers have both hands free. The chief disadvantage of sacks is that their use involves a greater possibility of bruising the fruit. In emptying either the basket or the sack, care should be taken to avoid dropping the fruit. If a basket is used it should be lowered to the bottom of the lug box or other receptacle and inverted gently. A certain type of sack is constructed with a drop bottom so that the fruit can be emptied without bruising it.

Ladders Make or Mar

Much efficiency in picking depends on the use of ladders of the proper type. Several varieties are in common use. Step ladders are especially satisfactory for work in small trees and in picking from the lower branches of larger trees. The most desirable types are wide and flaring at the bottom, narrow at the top and supported with but one prop. As a rule not enough consideration is given to the selection of ladders.

Where the crop is packed over tables that are moved about the orchard the packers usually carry the fruit in the picking utensil to the packing table. While it is common practice for the pickers to do this it should be avoided by assigning certain members of the crew to this task. They should also furnish the pickers with empty receptacles as needed.

In small orchards, when climatic conditions are especially favorable, it may be advisable to pack in the orchards, but in most instances some sort of shelter will insure better results.

Incombustible Vegetation

By M. B. Curtis

Some ten years ago the writer spent two years in southeastern Texas. The country is covered with a dense growth of mesquite, cat's claw, palo verde and many other trees and shrubs. The growth is very dense. Underneath and in open spaces, grows what is known as mesquite grass that resembles Bermuda grass. It grows from root cuttings and spreads by creeping along the ground and rooting at the joints. Unlike Bermuda it is easy to get rid of by plowing or cultivation. This country along the Rio Grande is at times very dry and crops cannot be successfully grown without irrigation. This section with its dense growth, with dead grass underneath, never suffered from forest fires. No one ever took pains to put out a fire; they were set indiscriminately every where; they never spread. I have seen a mesquite log smoulder along for a week and the fire from it never spread more than 20 to 30 feet. Immense brush piles would only burn a narrow circle around them. We cleared 200 feet and started fires under all sorts of conditions but they never spread

The mesquite grows under arid conditions, even in the Imperial Valley. Under irrigation it is a beautiful tree, resembling the pepper with its pendulous branches.

The mesquite grass is valuable for pasture and forms a dense mat. In time of drouth it simply suspends business and is ready to start with the first rain. I have seen it under five to eight feet of water for two weeks. It grew vigorously as soon as the water receded. Planted in rows it spreads and forms a dense mat, making a good lawn in a short time. The forestry department has a nearly clean slate in the San Dimas Canyon and San Gabriel country. May we not take a page from nature's book and grow something on our mountains that will not burn so readily? Mesquite grass will make a grass mat that will prevent washing.

Control of Walnut Codling Moth

To control the codling moth pest, which has done such serious damage to walnut groves, especially in Ventura and Santa Barbara Counties, the last legislature appropriated $10,000 a year for two years. The expenditure of this fund and investigation and control work was placed in the hands of the state department of agriculture which imposed the following regulations:

No sacks which have been used as containers for walnuts brought to any establishment where walnuts are handled shall leave until subjected to the necessary treatment to prevent them from acting as carriers of the said walnut codling moth.

It shall be unlawful for any person to transport from any locality to another any sacks which have been used as containers for walnuts, or which are of unknown origin unless said sacks be accompanied by a certificate by a duly authorized representative of the director of agriculture that they have been treated immediately prior to their leaving their last place of storage or their former use and have not, since such treatment, been exposed to infestation by said codling moth.

Any person who shall bring or cause to be brought from any district infested with walnut codling moth into a district where the pest is not known to exist any walnut sacks, containers, or orchard appliances shall, upon notification by any official charged with the enforcement of this act, cause all such sacks, containers, etc., used in the transportation thereof to be treated in such manner as will guarantee to the satisfaction of said official their freedom from the said walnut codling moth.

POLAND WANTS CALIFORNIA "LADYBIRDS"

Agricultural Director Hecke is in receipt of a request from the Polish ministry of agriculture at Warsaw asking that their agricultural department be furnished with ladybirds, Hippodamia convergens Guer.

COLLECTING THE PARASITES OF BLACK SCALE AND MEALYBUG

A parasite collector of the state department of agriculture is now in Africa collecting insects parasitic to black scale and mealybug. These will be sent to the state insectary at Sacramento where they will be propagated for later distribution to infested orchards.

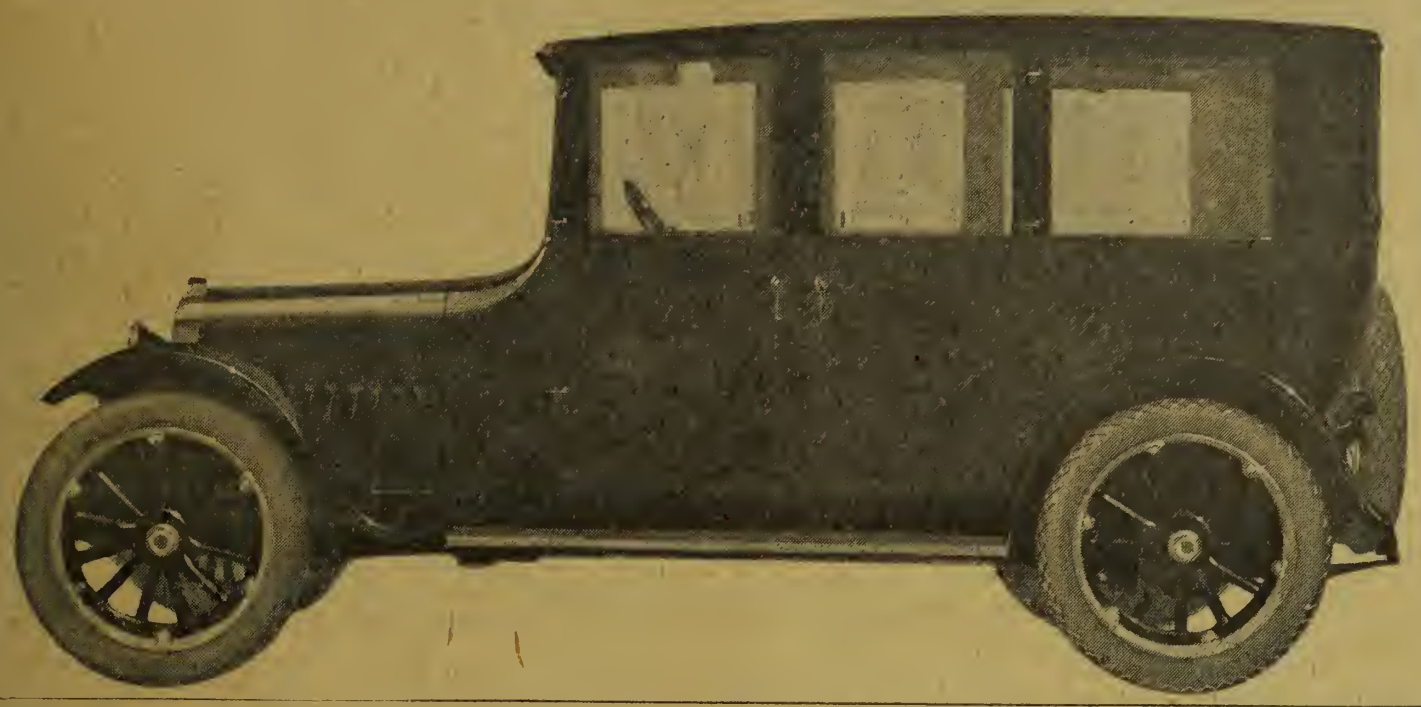
E. W. Rust, the collector, is being assisted with his work by government entomologists at Cape Town and Pretoria.

Peter Bisset, of the office of foreign seed and plant introduction, United States department of agriculture, has been inspecting the federal plant introduction gardens at Chico.

The government insectary, which has been located at Berkeley, will be moved to Sacramento as soon as a building can be secured or erected.

Oakland

OAKLAND OWNERS REPORT RETURNS OF FROM 18 TO 25 MILES PER GALLON OF GASOLINE AND FROM 8,000 TO 12,000 MILES ON TIRES



THIS NEW OAKLAND SENSIBLE SIX FOUR DOOR SEDAN IS POWERED WITH THE FAMOUS 44-HORSEPOWER OVERHEAD-VALVE OAKLAND ENGINE

OAKLAND
SENSIBLE SIX

NO matter what the roads, the season or the weather, there is true boulevard comfort in this new Oakland Sensible Six four door Sedan. Every essential convenience, including mechanical lifts for the windows in its double-latch doors, an inconspicuous heater for use on cold days, a serviceable windshield cleaner and like unusual equipment, has place in the appointment of this commodious and attractive car. Its solid body construction is notable for its freedom from needless weight, and the efficiency of its standard Oakland chassis makes its range of action fully as great as that of an open model. Only immense manufacturing resources and a production of unusual magnitude allow the combination of ability, usefulness and value embodied in this sedan.

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Melon Aphis

I have lost my melons on account of insect pests for two years. The young growth is attacked during tbe montb of August after first fruit is about half grown, tbe lice gatber on tbe under side of leaf, causing leaf to curl, and further growth is checked and blossoms and young fruit wither and fall off. Ants and flies gather in large numbers but they do not seem to destroy the pest. Owing to the fact that the lice attack the under side of the curling leaf it is rather difficult to apply any liquid solution. Can you suggest a remedy?—Subscriber, Pomona.

Melon aphis calls for a strenuous fight. If it is allowed to bave its way and go on and multiply either on the melon vines or on weeds in nearby fields it gives such an early infestation the next spring that the coming crop is reasonably sure to be destroyed before action can be taken. Control should be undertaken the preceding season in cleaning away all weeds, and the moment the pest becomes apparent spray or else burn the vines before a new generation can come on. Tbere may be secured a measure of control if great numbers of lady birds are installed in the field. These may be secured from the state horticultural commissioner early in the spring time. That is, they may be if tbe supply is sufficient. Tbe best control is preventing the pest from ever getting a foothold. It is the honeydew exuded by these aphis which calls the ants and they surely do not destroy the pest but aid and nurture it.

Ophthalmia

My rabbits are dying with a disease, the symptoms of wbicb first appear in tbeir eyes. Tbe lids are inflamed and half closed. Tbe bead bas a peculiar look as tbough it migbt be slightly swollen. They eat a little at first but finally refuse food altogetber and sit humped up with their ears flat on their backs and their sides drawn in. They last only about tbree days from the time tbey first show signs of sickness. The last day they breathe very fast. I bave lost half a dozen in about two weeks. I always separate the sick ones from the others as soon as I notice any sickness. So far the adult rabbits have been the only ones affected. For one meal I feed them bay and for the other a mash of alfalfa meal, beet pulp and rolled barley. I feed green alfalfa and carrots once in a wbile. Will you please tell me what is the cause and remedy of tbis disease?—Subscriber, San Luis Obispo.

Tbis is ophthalmia, a disease that affects tbe eyes. The cause is irritating gases from dirty hutches or dirty ground beneatb. Often tbe woodwork under hutch or ground below becomes filled with moisture and filtli and the gases arising cause the trouble. Often tbe butches though cleaned are disinfected with liquid tbat is too strong. Be sure butches and ground are clean and dry. Dry dust thrown into hutcb tbree or four times and swept out absorbs moisture and thus removes difficulty. Bathe eyes witb warm water. You can also use one-quarter ounce of wbite copperas to a pint of water, bathing eyes tbree or four times a day. Give your green feed regularly, three or four times a week.—W. D. White.

Unproductive Avocados

We have 40 of the prettiest avocado trees there are, I believe, anywhere, but as these trees were planted about five years ago and as yet have never blossomed, I am becoming rather anxious as to the final outcome. They are, I believe, mostly of the Taft variety, and while we have as a rule, enough frost to nip them a little every winter, tbey have gone ahead in growtb until they have become beautiful trees. Wbat I wish to find out is: Will these trees bear here; how they should be taken care of, water, fertilizer and so forth?—J. D. K., Redlands.

The original Taft tree did not fruit until 17 years of age and the budded stock seldom bears until seven or eight years old, though we have seen tbem bear at five years. We believe your trees are in good condition and will yield a crop in a year or two, possibly in 1920. Give them tbe same treatment accorded orange trees.

Citrus White Scale

I am sending some kind of bugs which I found on an orange tree. Please tell me what they are and what to do to get rid of them.—Subscriber, Long Beach.

These are the common white fluted or cottony cushion scale which promised in the later eighties to destroy California's citrus industry but which were later brought under control by the introduction from Australia of the vedalia. This beneficial insect has been generally scattered over the

OVERLAND SHOE CO. Dept. 161 Racine, Wisconsin

state and will possibly find your white scale within a reasonable length of time. However, the safest procedure is to write to Harry S. Smith, State Insectary, Sacramento, and ask for a colony of the vedalia. He may require in payment for same a colony of your white scale for pasturing these beneficial insects which he is propagating. In this connection we quote from a letter just received from the state department of agriculture as follows: Some weeks ago County Horticutural Commissioner Donald D Penny turned a swarm of ladybugs, vedalia cardinalis, loose in the trees in the Plaza at Watsonville, and they are now busy destroying the cottony cushion scale that has been infesting the trees. They work rapidly and are making great headway in relieving the trees of these parasites. They multiply rapidly also and there is a large number of them on the trees now.

Veterinary

Calf With Indigestion

We have a small heifer calf about four months old that does not chew her cud. She was lively when we bought her at one week old but is dull now. We give her twice a day two quarts of whole milk from a fresh cow, one quart skimmed milk, calf meal, middlings, some salt and all the water she wants. She lies down all day and sometimes will not come for her feed. Her eyes are bright but she does not seem to have much life. The passages from the bowels seem to have a lot of slime. She grows but is very poor and when she gets near a piece of metal will lick it or try to bite it. What would you advise?—Subscriber, Dobbins.

Your feed is altogether too rich for the calf. From your letter it seems that the calf is not getting any roughness. The bovine family must have something to make a cud. The middlings make a sticky, gummy mass, and of course the calf is sick. It does not need sweet milk at four months old. A gallon of sour milk twice a day would be all right, and by all means give it alfalfa and corn fodder if you can get it. If you want to add any more to the feed give a pint of rolled barley.

For medicine get one and one half pints of raw linseed oil, three ounces of turpentine and one dram of aloin. Mix and give half a teacup of the mixture once a day. Shake the bottle well to thoroughly mix the medicine. There will be six doses. If the medicine physics the calf then give less at a dose.

Pigs Caught Cold

I have some small pigs about three weeks old that are in good condition except they cough and sneeze. They also rub or scratch themselves on most parts of the body. Have dipped them in Kreso dip; one to 70 of water. What more would you advise doing for them?—Subscriber, Pinos Altos.

Give them a clean, dry place to sleep. Get of your druggist one pint of the syrup of cocillana compound and give each pig half a teaspoon of it twice a day. Give it with a spoon on the tongue. The Kreso dip should cure the itching. Sprinkle it around where they sleep also and remove any old straw or rotten wood where fleas or mites may breed.

Cow With Laminitis

I have an eight year old Jersey cow that has very long hoofs and they seem hard and I think the feet are feverish. She is very lame when she gets up in the morning and stands like a foundered horse; that is, stretched out. When she first gets up she will raise one foot and then another and shake it as though something was tied to it that she wants to shake off. She improves later in the day. The hoofs and dewclaws seem too dry and grow out in ridges. Otherwise she seems to be in perfect health. What would you suggest doing for her?—Subscriber, Escondido.

Yes, it is laminitis, or founder, the same as horses have, but is not so common, partly because cows that have indigestion bad enough to cause founder usually die. The foot is made up of a bone the shape of the foot, that is covered by soft tissue in layers called the laminae, where the blood circulates and outside of that the hoof or horn of the foot. A bad case of indigestion is likely to be followed by inflamation of the laminae of the feet, but nobody knows why. The disease is called laminitis. This inflammation causes an abnormal growth of the hoof. It grows thick and wrinkled and binds too tight, causing lameness. There is little or no remedy for it. Soaking the feet in cold water gives temporary relief. Running in a wet pasture will also help. You can fatten her and dispose of her for beef. The trouble will not affect the meat in any way.

O. L. Raper, a prominent rancher and stockman of Glenn County, has recently purchased the entire herd of Shorthorns owned by Chas. Silva of Sacramento. The purchase included about 40 head of cows and heifers, and this addition to Raper's herd gives him the ownership of one of the largest herds of registered Shorthorns in the upper Sacramento Valley.

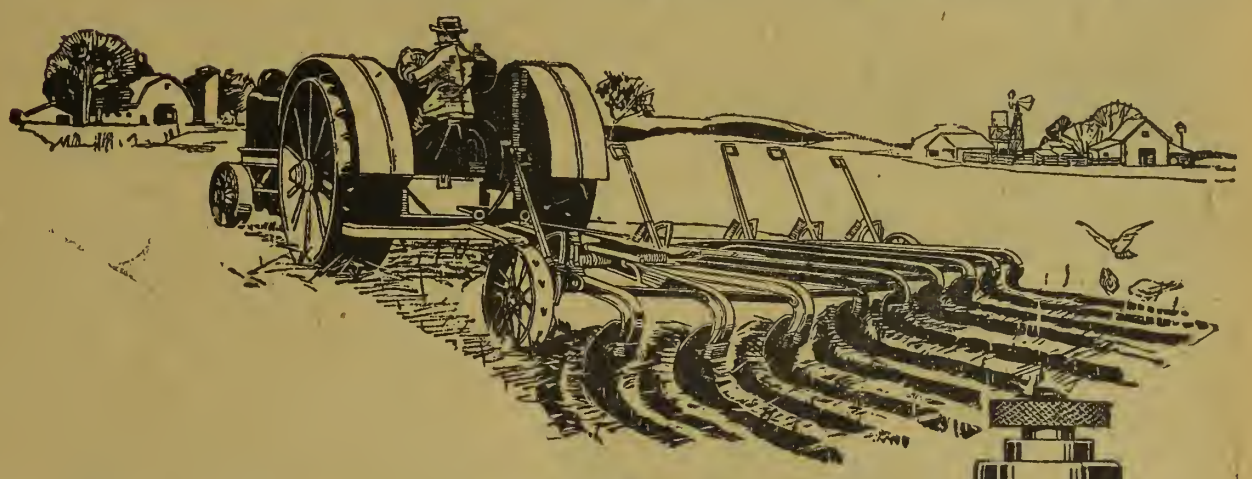
Champion
Dependable Spark Plugs



Play Important Part in Tractor Industry

FOR hours and hours at a stretch, the tractor engine is taxed to its utmost, imposing a sustained, maximum demand upon the spark plugs.

To withstand such brutal punishment and not "miss" even temporarily, spark plugs must be of more than common hardiness and efficiency.

Our famous No. 3450 Insulator, with its greater resistance to shocks and temperature changes, together with our patented gasket construction, fortify Champion Spark Plugs for the terrific battle they must constantly wage in tractor engines.

Because Champion Spark Plugs dependably perform this strenuous service a large number of tractor manufacturers use them as factory equipment.

There is a Champion Spark Plug for every type of motor car, motor truck, tractor, motorcycle and stationary engine.

New "Currant" Grape

The 7,000 cuttings of a dark variety of Corinth grape, known as "Panariti," which the department of agriculture distributed last spring from its experiment vineyards and from the vineyards of cooperating growers in California, have grown in splendid fashion the past season, reports show, and as a result much material in the way of cuttings and propagating stock of this variety will be available by the spring of 1921 for the extension of the currant industry in the United States.

The Panariti is a dark currant grape introduced by the department several years ago. Previous to the introduction and distribution of this sort, commercial production of currants in this country was not at all promising, in spite of the fact that the United States imports annually over 30,000,000 pounds of dried grapes made from such varieties. These grapes produce the currants of commerce used by housewives in cakes, puddings and other dishes.

The fact that a great market is already created for this product means much to the grape growers of the West. A product, however meritorious, with which the public is not familiar, requires a great deal of costly advertising and educational promotion to become fairly popular with the consumer. Nothing of this sort is needed so far as currants are concerned. The development of a new branch of the grape growing industry is of special interest to the vineyards of the Pacific Coast at this time when the industry is undergoing a radical readjustment.

Large production has been found to be dependent on ringing the trunk or bearing canes at the time the vines are in bloom. Unless this is done, the individual fruits in the cluster are not likely to be uniform in size and period of ripening. This early ripening grape is expected to produce currants of satisfactory quality in the bay counties where raisin production has not heretofore developed.

The name "Panariti," which has been applied to this variety, is taken from the name of one of the most famous grape growing districts in Greece where this sort was obtained. The Panariti is a distinct variety of the type of grapes used for the making of currants and should not be confused with other sorts of the currant type of grape previously introduced into the United States.

SHORTAGE OF SUGAR BEET SEED

The department of agriculture says that the sugar beet seed situation for 1921 is serious because of the limited production of sugar beet seed in Europe as compared with former years, because of the increased activity in beet sugar production in European countries, and because of the increased acreage planted to beets in this country in recent years. It is probable that several years will elapse before normal quantities of sugar beet seed will be produced in European countries. American growers, therefore, must depend to a considerable extent upon home grown sugar beet seed. There seems to be no good reason why this country should not produce its full requirement of sugar beet seed annually. The domestic production, now totaling millions of pounds, has demonstrated that seed of the highest quality may be produced in this country.

The present indications are that there is sufficient sugar beet seed, either imported or domestic, now in the hands of nearly all of the beet sugar companies in the United States to take care of the entire acreage to be planted in 1920, but that there is very little foreign seed now available for importation, and that the foreign production in the immediate future will be limited. Since sugar beet seed stored under normal conditions will retain its vitality for several years, it would be advisable for sugar companies to secure any seed of good quality now available and not more than two years old.

The domestic production is increasing rapidly. In 1918 about 6,000 acres of sugar beet seed were grown, while in 1919 upwards of 10,000 acres were planted to beet roots for seed. Unfortunately, drouth interfered with a normal production in some localities this past season, but the resulting reduction in yield was local and temporary and should not prevent or retard the efforts that are being made to produce in this country an adequate supply to meet the American requirement for 1921 and the years following.

In order to produce a crop of seed next year for the 1921 planting, it will be necessary to select the beet roots this fall, pit them so they will not freeze during the winter, and plant them as early as soil and weather conditions will permit next spring. Persons desiring full details in regard to growing sugar beet seed should address the Office of Sugar Plant Investigations, Bureau of Plant Industry, Department of Agriculture, Washington, D. C.

APPLE STANDARDIZATION WORK AT GRASS VALLEY

Commissioner Norton, writing to the state department of agriculture, comments on the workings of the standardization law as it affects apples.

"I have given instructions to my inspectors to cause no arrests, but to refuse shipment to all fruit that did not meet the requirements of the law, and I find that the plan works out all right. After a shipper has had to repack 50 or 100 boxes, he is a little careful about culling out defects the next time. I was short one inspector for a time and had to attend to four stations. A Chinaman offered 47 boxes of Bartletts for shipment, and upon inspection I found them about 40 per cent wormy. I told him to repack and throw out the wormy ones. He said, "Me send him San Flancisco." I told him that he could not sell them anywhere until he culled out the wormy ones. He dumped them all out on the floor of the freight house, removed the wrappers, and proceeded to repack with new wrappers. I told him in the best Chinese at my command that the proceeding was all wrong and that I would not let him ship them, but he only swore softly and kept at work. When he had finished he went to the freight office and told the agent to ship them to 'One Lung & Co., San Flancisco.' The agent refused to accept them without my inspection stamp, so he got an expressman to haul them to Chinatown, where he stacked them up, and they still remain there.

If you had been on the Arizona

HERE she comes, homeward bound, with "a bone in her teeth," and a record for looking into many strange ports in six short months.

If you had been one of her proud sailors you would have left New York City in *January*, been at Guantanamo, Cuba, in *February*, gone ashore at Port of Spain, Trinidad, in *March* and stopped at Brest, France, in *April* to bring the President home. In *May* the Arizona swung at her anchor in the harbor of Smyrna, Turkey. In *June* she rested under the shadow of Gibraltar and in *July* she was back in New York harbor.

Her crew boasts that no millionaire tourist ever globe-trotted like this. There was one period of four weeks in which the crew saw the coasts of North America, South America, Europe, Asia and Africa.

An enlistment in the navy

gives you a chance at the education of travel. Your mind is quickened by contact with new people, new places, new ways of doing things.

Pay begins the day you join. On board ship a man is always learning. There is work to be done and he is taught to do it well. Trade schools develop skill, industry and business ability. Work and play are planned by experts. Thirty days furlough each year with full pay. The food is fine. A full outfit of clothing is provided free. Promotion is unlimited for men of brains. You can enlist for two years and come out broader, stronger, abler. "The Navy made a man of me" is an expression often heard.

Apply at any recruiting station if you are over 17. There you will get full information. If you can't find the recruiting station, ask your Postmaster. He knows.

"Each of my inspectors is provided with a rubber stamp bearing the number of the inspector, and every box of fruit shipped out of the county bears the imprint of this stamp. The rubber stamp is indispensable in this county as we have four stations without an agent, and the train men will not pick up a shipment of fruit that has not been stamped."

A RECORD OLIVE CROP

Olive growers of the Redlands section report a larger crop on their trees than there was last year. The average yield per acre of the fruit in this section has been half a ton, but this season the outlook is for 25 per cent more fruit. There are several hundred acres of bearing olive trees in San Bernardino County. Olives sold to the buyers last fall in the orchard at an average of $170 per ton. They never sold above $80 a ton up to about 1914, when the war shut out importations of Italian and Spanish olives from America.

OREGON GROWERS COOPERATE

The new cooperative fruit marketing association organized this summer in Oregon has taken the name Oregon Growers Cooperative Association. It has already signed up 10,000 acres of fruit bearing orchards and expects to have 20,000 before January 1, at which time it will begin active work. Headquarters is at Salem. R. C. Paulus is to be general manager.

Contracts made with the growers call for handling all agricultural or horticultural products of members for the five years 1920 to 1924, fresh, dried, canned or in by-products.

FRUIT GROWERS WILL CONVENE AT CHICO

The fifty-second Convention of California Fruit Growers and Farmers will be held in Chico, November 10-15. The program will be arranged and sessions conducted by the newly organized state department of agriculture. The Chico chamber of commerce is in charge of local arrangements and is cooperating with the department in plans for making the convention a big success.

FLORIDA'S CITRUS CROP LARGE

Estimates place the coming citrus crop at 10,000,000 boxes. This includes both oranges and grapefruit. The orange crop will be about normal, but there will be a great increase in grapefruit. Grapefruit shipments commenced about three weeks ago; oranges will not start till the last of October. The fruit is ripening very early.

APPLES PICKED GREEN

Owing to many complaints of immaturity from Eastern receivers of Gravensteins the state department of agriculture has determined to arrange next year an early inspection and fix date for first picking in order to obviate occasion for any such complaints another year.

WALNUTS

Walnuts are not running so large a proportion of No. 1's as last season, but the tonnage is much greater. Price named by the California Walnut Growers Association on No. 1's is 31½ cents as against 28 cents last year; on No. 2's, 26 cents as against 25 cents in 1918. Much of the new acreage coming into bearing is of budded nuts which are bringing 32 to 34 cents.

TUOLUMNE APPLE PACK

W. I. Newcomb, district apple inspector, is in Tuolumne County supervising the packing of this season's apple crop, which is reported to be unusually heavy. This is the first year that the apple growers of this county have used the state apple stamps, hence they are desirous of getting started right and producing a standardized product, which may win recognition for the delicious Tuolumne County apples in the markets of the state.

ELASTIC KNIT
UNDERWEAR

GUARANTEE—We guarantee Hanes Underwear absolutely—every thread, stitch and button. We guarantee to return your money or give you a new garment if any seam breaks.

Greatest underwear value in America at the price!

You can't get greater warmth or better workmanship or more comfort or *more actual wear* than every suit of Hanes winter weight underwear for Men and Boys surely will supply!

Hanes is made in winter weight Union Suits and Shirts and Drawers. Illustrated here is the staunchest, most comfortable, wear-resisting union suit ever sold at the price.

Hanes Union Suits have the most desirable and dependable features—unbreakable seams; reinforced, non-stretching buttonholes *that last the life of the garment;* tailored collarette that cannot gap; shape holding elastic shoulders; elastic knit wrists and ankles; pearl buttons sewed on to stay. And, a closed crotch *that stays closed!*

Hanes Shirts and Drawers have the same desirable quality; perfect workmanship and features. Drawers have the durable, snug-fitting 3-button sateen waistband.

Union Suits for Boys in quality, cozy warmth and workmanship are unsurpassed at the price! Reinforced at all buttonhole and strain points. In fact they duplicate Hanes Union Suits for men, with added fleeciness. Made in sizes from 2 to 16 years. Two to four year sizes have the drop seat.

If your dealer cannot supply "Hanes" write us direct.

California International Live Stock Show

California Building, Panama-Pacific Exposition Grounds

San Francisco, Cal.
November 1st to 8th

Presents the most complete showing of Cattle, both dairy and beef, Horses, Swine, Sheep, Goats, Poultry and Rabbits ever offered on the Pacific Coast.

The Dairy Division, with its competitive display of Dairy Products, and an extensive exhibit of modern dairy and barn appliances, makes this the "National Dairy Show of the West".

The Night Horse Show will feature some of the most celebrated track and road horses of the country, comprising the fullest program of horse events ever offered in the West, including spectacular and novelty performances by U. S. Cavalry Troops.

San Francisco, with the cooperation of the entire West, has provided a really big live stock attraction that is both educational and entertaining and an exposition that you cannot afford to miss.

Show Opens Saturday, November 1st.
Show Closes Saturday, November, 8th.

FIRST TULARE LIVE STOCK SHOW

The agricultural and business interests of Tulare County staged the first annual Tulare County Live Stock Show at Tulare, October 6-11. The show is really an outgrowth of a series of public sales held in Tulare during the past year and indicates the influence that public sales can exert on a community. Following several successful sales the breeders and business men of Tulare decided to build a sales pavilion. Funds were raised by popular subscription; ground was purchased and the pavilion built. The enthusiasm thus developed encouraged those interested to establish an annual show or fair and the one just held was the result.

Extensive and attractive exhibits of farm products were made by the communities of Earlimart, Lindsay, Alta, Corcoran, Pixley, and by the Tulare board of trade and the farm bureau.

The farm machinery exhibit occupied the whole of a large tent. Nearly every kind of implement and a large number of tractors were shown.

Commercial displays represented nearly all lines of industry of the city and community.

The showing of live stock was the outstanding feature of the fair and would have been a distinct credit to a fair much older and larger. The showing was made possible because Tulare has developed into one of the leading live stock centers of this state.

Seven herds of Holsteins, two of Jerseys and one of milking Shorthorns were shown in the dairy division. The swine department consisted of seven herds of Duroc-Jerseys and six herds of Poland-Chinas.

Merritt-Bowers Co., Tulare, and John Burrell of Hanford had all the entries in the horse and jack classes.

Holsteins

The showing made by the Holstein exhibitors was the best seen to date outside of the state fair. The classes were well filled and competition was keen for the three top places in nearly every class. H. E. Vogel of Fresno landed both the championships. Segis Alcartra De Kol Burke was champion bull and the good cow, Betsy Lamb Prilly was champion female. W. J. Higdon of Tulare won all the groups and the get of sire and produce of dam classes.

Exhibitors: H. E. Vogel, Fresno; W. J. Higdon, Tulare; R. C. Sturgeon, Tulare; R. F. Guerin, Tulare; Alex. Whaley, Tulare; A. Mitchell, Tulare; T. J. Gist & Sons, Tulare; L. W. Bardsley, Tulare.

Aged bulls—1, Vogel on Segis Alcartra De Kol Burke; 2, Higdon on King Korndyke Pontiac 20th; 3, Gist on King Sadie Vale Rose.

Two year olds—1, Bardsley on Prince Riverside Meade; 2, Guerin on King Korndyke Sadie Vale; 3, Sturgeon on Segis Pontiac Abbekerk.

Senior yearlings—1, Higdon on Model Bonnie Fobes De Kol; 2, Mitchell on King Abbekerk Johanna Segis.

Senior bull calves—1 and 2, Higdon on Model Bonnie Walker and Model Walker Bonnie; 3, Gist on Halbert Pontiac Scott.

Junior bull calves—1, Higdon; 2, Whaley on Madrigal Acme of Eldorado.

Aged cows—1, Vogel on Betsy Lamb

LACTEIN
CONDENSED BUTTERMILK
FOR HOGS AND POULTRY

BUTTERMILK IS NATURE'S FOOD AND TONIC

Lactein is pure buttermilk as it comes from the churn, pasteurized, super-soured and condensed. It contains all the health giving food and tonic values of the original buttermilk without the useless bulk of water. On account of its high lactic acid content it will keep almost indefinitely.

Lactein is now recognized as one of the most necessary food digestive agents known for both growing hogs and poultry, due to the large amount of lactic acid it contains. The lactic acid aids digestion and assimilation, causing the hog or fowl to digest all the good from the grains given them to eat, and to eliminate all the dead and diseased matter from the digestive organs thereby promoting growth and preventing disease. Lactic acid is considered the best tonic, appetizer, liver and bowel regulator known for hogs and poultry.

Costs Less Than 2c. Per Gallon To Feed

One gallon of Lactein mixed with thirty gallons of water and fed with the usual grain feed will show greater gains than from feeding the grain alone, besides it will keep the hogs and poultry healthy and their appetites keen.

If your dealer does not handle Lactein, write us for our booklet and prices.

LACTEIN COMPANY 905 E STREET MODESTO, CALIF.

The Public Sale

By R. P. Royce

WITH the marked increase in public sales held in California during the past year, and in view of the certain extension of this form of selling as our live stock industry develops, and because this plan is comparatively new to this state, it may not be out of place to correct some of the misconceptions held by the public and to point out a few of the advantages and disadvantages of the public sale from the standpoint of the seller, the buyer, the community and the breed.

Since the earliest times the public sale has been used to secure distribution of products, and the fact that the plan continues in vogue is evidence that it is fundamentally sound and meets with general approval.

All values are predicated on supply and demand. The public sale simply serves to bring together the source of supply and the origin of demand. Therefore the values established can be considered as real and justified and perhaps truer values than can be established by any other means. Of course it is recognized that in connection with supply and demand values vary with the quality and degree of perfection of an article, but the public can be relied on to appraise quality for what it is worth.

The question was recently asked: "Do public sales serve a real purpose or are they occasions where breeders get together and connive to boost prices?"

The public sale is a legitimate method for disposing of live stock, and if it appears that breeders do attend and buy in competition with each other, thereby appearing to advance prices, the fact should be borne in mind that men interested in the same breed know values better than others not interested and their buying is nothing more than a business transaction and should serve as a guide to those who are not familiar with the breed.

Because a sale is public it does not necessarily follow that no opportunity is afforded for sharp practices, or, to put it more bluntly, crookedness. A sale is just the same as any other form of transaction and its honesty depends on the honesty of the seller. The writer believes that the majority of men are honest, and he is convinced that no class of men do business on a higher level than do live stock breeders. No business is so entirely dependent on the integrity of the individuals engaged in it as is the pure bred business, and the fact that so few scandals develop in the industry and that such scandals are so vigorously handled are proof positive that the business can boast of as clean a record as any. Undoubtedly crooked public sales of live stock do occur, but our readers can rest assured that they are few, and simply because a few shady sales have been put across the entire system should not be condemned and all sales looked upon with suspicion.

Aside from the distribution secured through it, the public sale has come to be recognized as one of the most important factors in extending the influence of better breeding stock. A sale properly advertised attracts buyers from a wide territory, men interested in the same breed and men about to enter the business. Ideas, observations, experiences and advice are exchanged, broader views are encouraged and the fact made plain that the interest of all is common and that one's own progress is limited to the progress of the breed as a whole.

Thus enthusiasm is stimulated, and enthusiasm is vital for advancement. By coming in contact with established breeders and sale attenders the new man is in a position to gain much information and to broaden his acquaintance. Furthermore, he can gain, as in no other way, perhaps, a correct knowledge of the bloodlines and type most sought and can note the values attached by men who know. He can therefore make more inteliigent selections.

Many breeders prefer to dispose of their surplus stock in one or more public sales a year for the reason that such a plan eliminates a lot of day to day detail work and permits them to transact the year's business in a short time. They get their receipts at once and therefore know how to handle their business a bit more definitely than otherwise. All details, such as testing, recording and transferring, can be done at one time. They feel that sales attract prospective buyers to the farm who would never visit the place otherwise, and they know that that is good publicity. They have confidence that the average crowd can be relied upon to set satisfactory values and they are willing to take the chance.

The principal disadvantage to the seller is the risk that he might not draw a representative crowd or that he will be unlucky with the weather man.

In addition to the advantages suggested above, the buyer always has the chance of picking bargains, and he can always set his own price, at least he does not have to take the seller's valuation. He has the opportunity of making numerous selections at one time rather than having to spend time and money in traveling from herd to herd. About the only real disadvantage, if indeed it can be called a disadvantage, to the buyer is the fact that he is forced to buy in competition.

Most pure bred sales are held with a definite guarantee as to health and breeding abilities of the animals offered, and such guarantees are binding and reliable. In a sale where animals are sold without any sort of guarantee, but just "as is," the buyer takes his chance and has no recourse of any kind except where fraud can be established.

The various breed record associations, the press and fellow breeders make it their business to see that sales are conducted in such a manner as to leave no ground for complaint, as it is recognized that crooked sales cast a shadow over all interests concerned and the business suffers accordingly.

There is one place in the sale business that is a source of occasional unfortunate transactions. There is no denying the fact that public sale averages tend to develop keen rivalry between the breeders, and there is always the danger that a few speculative men in an effort to establish records will resort to underhand practices to make these apparent records by means of "wash sales." In their desire to hang up a high record men will sometimes sell an animal at private treaty for a conservative amount and then put it through a sale and have the buyer run the price up—or resort to other unfair methods. Some men, usually those who have little experience in selling at auction, fear that the crowd will take advantage of the offering and not pay a fair price, and they set about to "protect" the sale by having a friend "bid in" any animal that does not bring a certain price. This practice is rather more rare now than a few years ago, because it has been proven time and time again that such methods do not pay in the long run and cast discredit on the seller. The man who attempts to "protect" his animals is not a good sport, and the fact that he does is evidence that he does not know actual values and has an exalted opinion of his productions. This fact can be established; given a representative crowd, they will pay all that an article is worth.

The public sale serves another purpose besides setting values on the seller's productions; it is perhaps the most important factor in establishing the general range of values for the entire breed. As pointed out above, the sale attracts other breeders and provides an opportunity for them to note the values placed by the public on the seller's stuff and to compare the different sale offerings with his own herd. He can therefore, arrive at a correct conclusion as to what prices he can expect.

100 REGISTERED HOLSTEINS 100

—AT PUBLIC AUCTION—

C. A. Miller Ranch, Ripon, Calif.

Thursday, October 30, 1919

In this sale C. A. MILLER will disperse his entire herd with the exception of two cows and a few heifer calves, about 50 head; GOTSHALL & MAGRUDER will contribute 30 head; H. A. De WOLF will contribute 20 head. The cattle are one of the best bred lots to be sold this season, and include a very large percentage of young animals from calves up to open and bred heifers, and young cows, mostly with A. R. O. records or from A. R. O. dams.

A. R. O. COWS WITH RECORDS UP TO OVER 28 LBS. BUTTER IN 7 DAYS.

HEIFERS FROM DAMS WITH RECORDS UP TO OVER 32 LBS. BUTTER IN 7 DAYS.

COWS AND HEIFERS BRED TO A 33 POUND SON OF KING MEAD OF RIVERSIDE.

COWS AND HEIFERS BRED TO A SON OF SIR SKYLARK ORMSBY HENGERVELD

DAUGHTERS OF SIR VEEMAN KORNDYKE PONTIAC, 30-POUND SON OF SIR VEEMAN HENGERVELD

DAUGHTERS OF PRINCE GELSCHE WALKER

DAUGHTERS AND SONS OF KING KORNDYKE PONTIAC 20TH, THE $6500 SON OF MISS VALLEY MEAD DE KOL WALKER

Also a fine selection of sons and daughters of King Segis Pontiac Jannek; It; Moorland King Mead Haskins; King Paul Korndyke Vale; Prince Gelsche Walker 11th; Prince Aralia Walker; Nudine Butter Boy; Sir Segis Walker; King Morco Alcartra; Colantha Sir Pontiac Aaggie; and others of most popular high record breeding.

IF YOU WANT SOME OF THE BEST BRED, YOUNG REGISTERED HOLSTEIN CATTLE TO BE OFFERED THIS SEASON, BE SURE TO ATTEND THIS SALE.

Every animal guaranteed to be a breeder; no animal tuberculin tested. Catalog free on request.

NOTE—Sale will be held on C. A. Miller Ranch, 6½ miles northwest of Ripon, 13 miles southwest of Stockton on French Camp Road. Tidewater & Southern cars from Stockton and Modesto will stop at ranch on sale day. Parties coming by Southern Pacific will be met at Ripon morning of sale.

Public sales can be made important affairs from a community standpoint. A well advertised sale will bring many visitors to a community who would probably never come except for the sale. There are many towns and villages in the great pure bred centers of the East that owe their entire claim to fame to the fact that they happen to be the seat of some breeder's operations. The writer could cite several instances where live stock sales furnished the stimulus for certain civic and municipal improvements. Many a country town has gained a better hotel because of the public sale.

Sales can be made to serve the community in other ways. Consignment and combination sales are dependent on cooperation, and once the cooperative spirit is given birth in a community the possibilities are unlimited. At Tulare, after a few sales had been held in the community, the business interests of the county recognized their value to the community, and in order to encourage the holding of more a modern sales and show pavilion was built through cooperative effort. Today there is not a county in the state where a finer or more progressive spirit is manifested than will be found in and around Tulare. Consignment sales have done much to develop the same spirit at Hanford and to give that town the reputation of being the Poland China center of the Coast.

Public sales are established institutions and are certain to play an important role in the development of the pure bred live stock industry of California. They can be made factors for good or bad, just to the extent that they enjoy the support and confidence of the breeders, the community and the buyers. In that respect the public sale is no whit different from any other institution. The vast majority of sales are clean and should be so regarded by the public.

VALUE OF LIVE STOCK SHOWS

By B. O. Cowan

The importance of pure bred live stock in the development of California is better understood now than at former times. This is clearly indicated by the large number of pure breds of the various breeds that have been brought into the state during recent years. The Cultivator and other agricultural and stock journals can render a valuable aid to farmers and ranchmen by impressing the importance of this industry of the state. Fairs and distinctive live stock shows are valuable educators. Aside from the substantial encouragement given to breeders by these exhibitions, they furnish the public with an excellent opportunity to see the value of improved blood in all classes of live stock. These exhibitions of prize winners have converted thousands of stockmen from the use of scrub sires. The long list of exhibitors at the October show in Los Angeles as given in the California Cultivator of October 4 was interesting information, but it would have been much more instructive and satisfactory if the entries had been arranged by breeds. Draft horses, dairy cattle, beef cattle and several breeds of hogs were enumerated in a veritable jumble and among these several breeds of goats are butted in to make confusion worse confounded. As an illustration, there are seven entries of goats and 13 of Duroc hogs, yet no two given consecutively but each one sandwiched with some other breed. This suggestion may seem a trivial criticism, but it certainly is in the interest of a more orderly arrangement of live stock information and greater satisfaction to readers.

GOAT BREEDERS ORGANIZE

The Central California Milk Goat Breeders' Association recently organized has issued a booklet containing constitution and by-laws of the association and list of officers. The officers are: Dr. Carl Wilson, president; Miss Irmagarde Richards, vice president; Edwin C. Voorhies, secretary-treasurer, Agriculture Hall, Berkeley. Executive committee: Dr. Wilson, Miss Richards, Edwin C. Voorhies, L. A. Bridinger, O. H. Freschlag.

SAN JOAQUIN COUNTY REVIVES FAIR

After a lapse of 17 years San Joaquin County held a fair at the old fair grounds near Stockton, October 6-8, and while this year's show left much to be desired, it will undoubtedly serve to encourage wider efforts next year. In a community as rich and progressive as San Joaquin County there is certainly no reason why a splendid showing of agricultural, horticultural and live stock resources can not be made. If enthusiasm is developed and a comprehensive show established, it will mean much to the community. There is no enterprise that will serve to stimulate the use of better live stock as will a fair.

J. E. Thorp, of Lockeford, made the only showing of Jerseys. H. E. Cornwell and R. L. Holmes, of Modesto, and J. M. Campbell, of Escalon, made the principal exhibits of Holsteins. Cornwell's Ciruela Walker was champion female and Sir Johanna De Kol Rag Apple from the same herd was champion bull.

A. B. Humphrey, of Escalon, was the only exhibitor of Guernseys.

J. E. Thorp took all the championships in Duroc-Jerseys.

Geo. V. Beckman and Sons, of Lodi, J. F. Lehman, Lodi, and N. K. Horan, of Lockeford, had entries in the Poland-China classes. Beckman's aged boar, Matchless Big Bob of U. F., was senior and grand champion boar and their sow Belle's Beauty was given top rating among the sows. The Beckmans had the aged herd and Lehman was first with his young herd.

A. B. Humphrey made the only showing of Berkshires.

Professor C. W. Rubel, assistant state leader of farm advisers and Professor V. C. Bryant of the extension department served as live stock judges.

CONVENTION OF CATTLEMEN

Of profound importance to the cattlemen of California is the coming convention to be held at the Palace Hotel, San Francisco, on Wednesday evening, November 5 and the mornings of Thursday and Friday, November 6 and 7.

Among the principal matters to come before the convention will be:

Discussion of the Kenyon bill, and a memorialization to congress by the cattlemen of California as to whether this measure is endorsed or opposed by them, or modified form of regulation suggested.

Consideration of the report of the marketing committee of the California Cattlemens Association, which will be of paramount interest to the breeders of cattle within this state.

Instructive and interesting addresses by men selected for their ability to treat on the subjects concerning which they have been asked to speak.

The opportunity for the cattlemen of the state to meet one another and voice their recommendations as to what may best be accomplished through their organized cooperation.

WHY, OF COURSE

"Pop," said the youthful seeker after knowledge, "why do words have roots?"

"I suppose, my son," answered the weary parent, "so the language can grow."

Durocs and Holsteins

Select Blood Lines — Highest Individuality

Inspection of Herds Solicited at all Times

These Herds Constitute an Educational Feature of our School

At the Southern California Fair at Riverside, 1919, our great bull, Dicter Spofford Korndyke Lad 5th was again made grand champion of the show, in strongest of competition. We likewise won 1st on senior bull calf, Republic Tuebie Korndyke; 1st on senior yearling heifer, Ida De Kol Pearl Lyons; 2nd on junior heifer calf, Victory Pontiac Maid; junior champion bull; 1st on aged herd; and two 3rds in classes.

Our young Durocs are the get of Cherry Chief 2d and California Great Wonder, and out of Golden Model dams.

Our methods are calculated to develop the best there is in these great breeds. Our equipment is up-to-date, and common sense methods are enforced. Write or call.

Tulare, Calif.

Tuesday, Oct. 21st

46 Bred Sows and Gilts

4 Young Boars

Every animal has been selected with the view of making this sale worthy the breed. The breeders are consigning animals of proven merit sired by as good boars as can be found in the West. They are bred to boars of equal merit. This sale will not disappoint you. We invite you to come.

Geo. W. Bell, Tulare, Auctioneer

Sale starts at 12.30 P.M. Lunch at 11.30 A.M.

R. F. Guerin, Pres. Tulare Hugh C. Shinn, Sec'y

Matchless Big Bob

has proven a sire of remarkable big type, growthy Poland-Chinas. Recent sales, both public and private, stamp him as one of the leading sires on the coast. Don't you want one of the "make good" kind? Write for description of what you desire.

Geo. V. Beckman & Sons, Lodi, Calif.

Big Model Fellow

The boar the breeders could not fault. At State Fair he was 1st senior yearling and reserve grand champion. As indication of his character notice his height, length, depth and smoothness — notice how he stands on four good feet. Pay particular attention to his hams. This is the kind of a boar we want.

J. F. McSwain, Merced, Calif.

Prize Winning Boars

Just a few—very few—left, of top young boars. I was the largest winner at State Fair. I am breeding Poland-Chinas that our best judges say are the right kind. Get one of these now. Let me describe one to you.

J. F. LEHMAN LODI, CALIF.

Come and See Them

Our Big Type Poland-Chinas are the real kind of hogs. If you can't come write for what you want. We have them if you want the prolific, quick growing, big type-kind.

Poland-China Ranch H. B. Peake Mgr. **San Bernardino, Calif.**

Make the reading of advertisements in the California Cultivator a habit. They will broaden your knowledge of the manufacturing improvements.

A New Herd of Shorthorns

One of the most notable additions to the pure bred live stock interests of this state is the establishment of a high class herd of Shorthorn cattle by Easton & Ward, owners of Blackhawk Ranch near Diablo, Contra Costa County.

For a good many years the name of Blackhawk has been familiar in live stock circles of the West because of the activity of the owners in Shire horse breeding. Originally the breeding plant was located at Burlingame, but a few years ago several thousand acres just at the foot of Mount Diablo were purchased and the owners set about developing a plant that would be one of the outstanding establishments of the West. During the comparatively short time in the new location a marvelous amount of work has been laid out and accomplished; the entire tract has been fenced; water has been developed; one of the most attractive country homes in the state built; and what is perhaps one of the most satisfactory barns in California has been erected. Much more remains to be done but the owners have a very definite notion of what they want and a determination to see the plan to completion.

Blackhawk Ranch is an ideal stock ranch, combining as it does plenty of splendid range and enough tillable land to provide grain and other cultivated crops. Having such a property it was a foregone conclusion that cattle would be handled in connection with the horses maintained. Incidentally, it is of interest to state that this firm has an abiding and well founded faith in the future of draft horse production. The owners are not blind to the fact that the demand for horses has been light the past few years and that breeding operations have fallen to an alarming point, but they are continuing to breed all the mares and they are certain to reap the results of this foresight.

At present the Blackhawk Shires represent a stronger collection than was ever in the barns, and practically every animal has been bred and developed by themselves. The string that is being fitted for the fall shows is of a quality to justify the prediction that they would give a good account if seen in any show. At least two three-year-old stallions, one two-year-old stallion, and the famous black five-year-old mare Blackhawk Chessie will make the circuit. Blackhawk Chessie has developed wonderfully since shown in her three-year-old form. She is now a mare of massive proportions, yet retains her sweetness and style. Her way of going will be the despair of mares attempting to take her measure. There is a possibility that she may be seen in the Eastern shows—none of which will be too exclusive for her to be at home. If one has the idea that horse values have depreciated he will be quite disillusioned by asking a price on Chessie.

But it is the Shorthorns that claim our attention at this time. Mr. Ward and Manager Lovell investigated the problem very thoroughly for several years and reached the conclusion that Shorthorns were best adapted to their conditions and would fit in to their plans. Accordingly, they spent a good deal of time studying the trend of times as regards the breed and decided to establish a herd of high class individuals combining modern type and popular Scotch breeding. Two months were spent in visiting the leading herds of the Middle West, and they returned with about 40 head. Space does not permit mentioning all, but a few can be referred to. For a herd bull the three-year-old Roan Radium was selected. This bull, a beautiful roan, was bred by Ogden & Son of Marysville, Missouri. He was sired by Radium, whose three daughters sold in the recent Bellows Bros.' sale for $4,266. His dam was Banker's Sweetheart, a Buttercup sired by Diamond Goods. Roan Radium is a very compact, masculine fronted bull, level of lines, with a thick covering of smooth, mellow flesh. Calves by him indicate that he is a prepotent sire.

Among the females are a number of outstanding matrons. One, a sweet-headed, thick-fleshed, dark roan, daughter of Village Favorite, a grandson of Villager, and out of a Mysie dam by Golden Crest, is a particularly pleasing type. The light roan, Violet Village Belle, by Village Knight and out of Violet's Pride, by Violet's Favorite, is the sort that attracts attention in any herd — very broody, thick and smooth. Another light roan by the same sire and out of a Victoria dam is regarded highly. Clara 10th, a white daughter of Village Knight and out of Linwood Clara 4th, has those qualities real breeders look for in herd matrons. Red Lady 39th, by Sultan Royal, a son of Whitehall Sultan and from a Roan Lady dam, has proven her ability as a producer. Roan Lady 37th, by Village Knight, from the same dam as Red Lady 39th, is much the same valuable type. Manager Lovell thinks a great deal of Silver Butterfly 2d, a daughter of Gainford Champion and out of a Butterfly dam. Gainford Champion is one of the leading sires of the breed.

It is not planned to have out a show herd this year, but with such a foundation it can be expected that the Blackhawk Shorthorns will make their appearance by another year. Messrs. Easton and Ward contemplate building up the herd until it numbers between 100 and 150 head of breeding cows.

Village Blossom

One of the matrons in the Blackhawk herd of Easton & Ward.

ARCATA COW TESTING

The value of cow testing is shown in the report of productions made by the cows in the Arcata Cow Testing Association. This is one of the oldest associations in the state. The report for July shows 56 cows making better than 60 pounds butter fat per month. The top notcher in the entire association was in the herd of W. W. Turner, whose Jersey cow, No. 24, produced 1581 pounds of milk with a test of 5.2 or a total of 82.1 pounds fat. Mr. Turner had four other cows making 63.2 pounds of fat or better. Another herd with a remarkable record was

CAUTION

Do Not Be Deceived

There is only one GENUINE O. M. FRANKLIN Blackleg Aggressin (commonly called Vaccine).

Beware of imitations. You cannot afford to have anyone experiment on your animals.

Accurate use of the GENUINE O. M. FRANKLIN Blackleg Vaccine positively protects against Blackleg.

Be absolutely safe in using the ORIGINAL and GENUINE manufactured by THE KANSAS BLACKLEG SERUM CO., under the direct supervision of Dr. O. M. Franklin the ORIGINATOR.

that of S. V. Foster, Jr., whose top notch cow was a Jersey, No. 47. She produced 1354 pounds milk which tested six per cent or a total for the month of 81.2 pounds fat. In the same herd were 16 other cows going above the 60 pound mark. These 17 cows would require only two months to produce enough butter fat to equal the average dairy cow the United States over for 12 months. Such cows are profit makers. In the same association is the herd of Martin Pontoni, who had seven cows producing 62.3 pounds fat or better. Another was that of E. Biondini with five cows producing 62 pounds fat or better. R. L. Chaffey had four cows with 62.06 pounds or better. Geo. McCready had three cows with 62 pounds or better. Other dairies with two cows all running about 62 pounds were those of James Kirkpatrick, Peter Iversen and James Vierria. Dairies of one cow better than 62 pounds were those of Martin Diaz, William Peterson, C. W. Thompson, Frank Rieberie, Axel Kijer and A. N. Hunt. The reports for the same association for August are not so good as there were not so many cows in the high producing class. In fact, there were only 27 or less than half of the earlier month. One cow, however, in the high producing class was in the dairy of D. J. Turner, whose Jersey (Bess) produced 83 pounds fat from 1664 pounds milk.

DUROC SALE EVENT

By T. J. Hitte

A stirring event in Southern California Duroc-Jersey circles is that to be staged by the Ireland Ranch for January 1. This is the date claimed by Dr. Creamer for public sale of bred sows to be held at the ranch at Owensmouth. Not a thing is to be left undone that can go to make the offering a real attraction for ranchers and Duroc fanciers. The Ireland Ranch Durocs are noted for size, smoothness, quality, prolificacy and, in fact, for everything that goes to the make-up of an ideal up-to-date type of hog. The 1918 record in the show ring amply shows this fact. The blood of the big champion Cherry Volunteer II will be much in evidence. A foundation sow here of no small note is Cardinal Lady C., dam of last year's winners, among them the champion barrow, Buzz, that made history for the breed at both Riverside and Los Angeles. Three big sows of the right type will be seen at these shows this year; Ireland's Maid, Ireland's Model Lady and Reformer Queen. An outstanding senior boar pig is to be seen also in the Ireland Ranch show herd, by Cherry Volunteer II, and out of Ireland's Maid. The show contingent will consist of eight head.

FEED COST OF RAISING HEIFERS

The importance of providing cheap feed for growing heifers and practicing thorough culling is brought out by the results of feeding experiments recently completed by the dairy division, United States department of agriculture. In these experiments groups of calves were fed from birth to one year and two years of age and a record kept of all feed consumed.

In one experiment 11 heifer calves were raised to the age of one year. The amount of feed consumed by each calf was as follows: Hay, 571.8 pounds; grain, 885.5 pounds; silage, 3,693.1 pounds; milk, 110 pounds; skim milk, 2,414 pounds. Estimating the hay at $30 per ton, grain at $60, and silage at $8 per ton, milk at four cents and skim milk at three-fourths cents per pound, the cost of raising each heifer to one year of age was $72.42.

Five of the calves from the first experiment were then fed for one more year. During this second year each calf consumed on the average 1,117.8 pounds of hay, 1,221.6 pounds of grain, 8,031 pounds of silage. Using the same figures for computing the cost of the feeds consumed during this second year, the total cost of raising a heifer from birth until two years of age was $157.96. These figures emphasize the necessity of providing cheap feed for heifers such as pasture and silage and bring out the importance of caretully culling the heifers to avoid raising those which will prove to be inferior cows.

Mossdale Farm

JERSEY CATTLE **DUROC-JERSEY SWINE**

We believe that the test of a sire lies in his ability to sire uniform, prize winning offspring, and we are proud of the record of Mossdale sires.

Jerseys---

Our herd bull, JOLLY SENATOR RALEIGH, was never defeated in class as a yearling or as a two-year-old and this year he was grand champion, as a three-year-old, at the California State Fair, the Kings County Fair and the Fresno Fair. And at each of those shows his get won the get of sire class.

Duroc-Jerseys---

The record of Mossdale Durocs at recent fairs is proof of their merit. Freddy You'll Do, our herd boar, sired the winning get of sire group at the above fairs.

We can furnish young things of either breed at prices that are attractive. Write us your wants.

See Mossdale Exhibits at Los Angeles and San Francisco

BASSETT, CRAWSHAW AND ROSS SALE

By B. S. Bennett

The Poland-China sale of Bassett, Crawshaw and Ross was held in Hanford, October 7. While the attendance was not as large as is usually the case when sales are held in Hanford, it was demonstrated that it does not require a large attendance to hold a successful sale. Fifty-six bred sows and gilts were sold for an average of $151.35, and five young boars for $105. The top of the sale was the gilt Model Wonder by Model Fellow, from the Bassett consignment, J. F. McSwain, of Merced, being the purchaser, at $360. Mrs. C. H. Sears, of Bakersfield, selected a gilt by Rossmead Bob from the Ross consignment at $340 and H. D. McCune, of Lemoore, selected from the Crawshaw consignment Gerst Juno II. by Cal. Gerstdale, at $180. Ord L. Leachman, of Sacramento, was the auctioneer. Following is detailed report of the sale:

Bassett Consignment

1—C. T. Starr, Hanford, $180.
2—J. F. McSwain, Merced, $360.
3—H. K. Dickson, Bakersfield, $120.
4—J. F. McSwain, $130.
6—J. P. Galeener, Modesto, $130.
7—J. F. McSwain, $125.
8—J. H. Cook, Paradise, $170.
9—J. F. McSwain, $115.
10—Ellyn Kent, Bakersfield, $160.
11—Les McCracken, Ripon, $140.
12—H. H. Rowland, Shafter, $140.
13—Orval Filmore, Bakersfield, $130.
14—J. F. McSwain, $125.
15—J. F. McSwain, $140.
16—J. P. Galeener, $135.
17—Z. M. Dickey, Dinuba, $95.
18—J. F. McSwain, $115.
19—J. F. McSwain, $110.
20—J. F. McSwain, $190.
21—Les McCracken, $165.
22—M. Delfino, Bakersfield, $145.
23—J. F. McSwain, $115.
24—J. F. McSwain, $110.
25—J. F. McSwain, $95.
26—Les McCracken, $95.
31—M. Delfino, $155.
32—H. Stephens, Bakersfield, $155.
35—Cora Dinzer, Lemoore, $115.
36—Les McCracken, $100.
38—Z. W. Dickey, $115.
39—M. R. Vierra, Hanford, $60.
40—Les McCracken, $50.
41—C. T. Starr, $140.

Crawshaw Consignment

42—C. A. Vaughn, Hanford, $120.
43—Les McCracken, $105.
44—E. G. Myers, Riverdale, $110.
45—Z. M. Dickey, $160.
46—Z. M. Dickey, $100.
47—W. E. Mullen, Shafter, $135.
48—Chas McNeil, Fresno, $135.
49—W. E. Martin, Tulare, $165.
50—Chas McNeil, $140.
51—Wm. Bernstein, Hanford, $125.
52—W. D. Trewhitt, Hanford, $140.
53—Les McCracken, $120.
54—Les McCracken, $120.
55—H. K. Dickson, $135.
56—Glenn Davis, Bakersfield, $125.
57—Frank Johnson, Hanford, $145.
58—N. Jinnett, Bakersfield, $135.
59—H. D. McCune, Lemoore, $180.
60—R. S. Willis, Lemorre, $165.
61—R. S. Willis, $165.

Ross Consignment

63—C. L. Newport, Hanford, $150.
64—A. Buckland & Son, Fresno, $325.
65—Z. M. Dickey, $185.
66—J. F. McSwain, $210.
67—Mrs. C. H. Sears, Bakersfield, $340.
68—Les McCracken, $150.
70—Les McCracken, $150.
71—J. F. McSwain, $330.

H. P. Slocum and Son, prominent breeders of Duroc-Jersey swine have recently purchased 400 acres of land near Arbors, Glenn County, and they expect to transfer their breeding operations to their new location at an early date. Clayton Slocum reports a very heavy demand for pure bred Durocs.

WESTERN BERKSHIRE CONGRESS CONSIGNMENT SALE

Los Angeles Live Stock Show

Wednesday October 22

30 Carefully Selected Bred Sows, Gilts and Boars

Breed Berkshires for Profit

Berkshires are the oldest improved breed of swine—that is the reason that Berkshires are the most popular and profitable. Berkshires have won more contests in competition with other breeds than any one breed. Berkshire barrows are usually champion barrows. Berkshires are economical feeders, mature early, are prolific, are good mothers and kill out very high. They are the most perfect hog. They are the hog of no regret.

An Opportunity

The purpose of this sale is to give Southern California hog raisers an opportunity to test out the above facts and the offering has been carefully selected from a number of the best herds on the Pacific Coast. The sale will therefore furnish an opportunity for breeders and beginners to select breeding material that is of foundation character.

This Offering

Will consist of 30 head of bred sows, bred gilts and a few top boars. Included in the lot are a number of show ring winners and all represent the highest type Berkshires being produced. Every sow or gilt to be sold is guaranteed to be a breeder. The boars are particularly attractive and are good enough to go into the best herds. Every animal immune to cholera.

Remember: the Berkshire Hog Is the Standard Hog

For catalogs and any further information, address the secretary.

THE SAN FRANCISCO SHOW

By David J. Stollery

Thoughtful cattlemen, as well as the active representatives of other branches of live stock, have for years past been exerting their efforts toward making possible a San Francisco live stock show, and the culmination of their hopes is at hand.

The educational advantages arising out of a truly representative live stock show are beyond description, and no live stock breeder can visit such a show as is contemplated for San Francisco during the first week in November without receiving inspiration, and to the live stock producer, inspiration spells profit.

The business men of San Francisco have gone to both trouble and expense in making possible this first exhibition, realizing that on the agricultural industry of California the prosperity of the state depends. The authorities have kindly donated the use of the California Building, Exposition Grounds, San Francisco, for the show, a truly ideal location for this "Show of Shows." It may be necessary to make other arrangements for a place to hold future shows as the California Building is but a temporary structure, so that it behooves the cattlemen to give support to the show by their attendance in order that its perpetuation may be deemed worth while as a result of the support accorded it.

NATIONAL SWINE SHOW CHAMPIONS

At the National Swine Show held at Des Moines, Iowa, September 29-October 4 championships were awarded as follows in the principal breeds:

Poland-Chinas: Senior champion boar—Bloomendaal Bros., Orange City, Iowa, on The Pilot. Junior champion—E. C. Caverly and Sons, Toulon, Illinois, on Nobility. Grand champion—The Pilot. Senior champion sow—Meyer Bros. and Parkhart, Hooper, Nebraska, on Miss Bob Wonder. Junior champion—Winn and Moore, Randolph, Missouri, on Big Model 2d. Grand champion—Miss Bob Wonder.

Duroc-Jerscys: Senior champion boar—Ed Kern, Stanton, Nebraska, on Great Orion Sensation. Junior champion — Clyde Lorentz, Leonard, Missouri, on Major Sensation. Senior champion sow—W. M. Putman, Tecumseh, Nebraska, on Queen of Pathfinders. Junior champion sow — Ira Jackson, Tippecanoe City, Ohio, on Walt's Orion Lady 14th. Grand champion sow—Queen of Pathfinders.

Berkshires: Senior champion boar—Piping Brook Farm, Greenwich, Connecticut, on Fairview Ruler. Junior champion—Rodgers Bros., Harrodsburg, Kentucky, on Matchless Lee's Double. Grand champion—Fairview Ruler. Senior champion sow—Piping Brook Farm on Lady Premier 208th. Junior champion—Rodgers Bros. on Royal Matchless Lady. Grand champion—Lady Premier 208th.

Chester Whites: Senior champion boar—B. M. Boyer and Sons, Farmington, Iowa, on Prince Big Bone. Junior champion—C. F. Brown, Webster City, Iowa, on King Anak. Grand champion — Prince Big Bone. Senior champion sow—Raymond Brown, Dunlap, Iowa, on Big Nellie 2d. Junior champion—Raymond Brown on Perfection 2d. Grand champion — Big Nellie 2d.

Hampshires: Senior champion boar—Keystone Farms, Marion, Ohio, on Messenger All Over. Junior champion—Willie Essig, Tipton, Indiana, on Essig's Model. Grand champion—Messenger All Over. Senior champion sow—Willie Essig on Lady Big Bone. Junior champion — Wickfield Farms, Cantrill, Iowa, on Miss Liberator. Grand champion—Lady Big Bone.

Sir Veeman Korndyke Pontiac, 156051

BUY BULL WHILE YOUNG

The oldest bull calf at Burr Farm today is under 6 months. We have plan that sells them young. Four bull calves by Sir Veeman Korndyke Pontiac, and out of tested dams, now offered.

One from a 22.93 lb. three year old, milked up to 87 lbs. per day; 2000 pounds 30 days.

Two from a 16.60 lb. two year old, that milked 62 lbs. per day; 1800 lbs. 30 days.

Three from a two year old with 14.97 lbs. milk in seven days.

Four from an 18.98 lb. cow.

Write us now about our young bull prospects.

Burr Farm Registered Holsteins
Bred for Milk and Butter Production

The leading sire in service is the great bull, Sir Veeman Korndyke Pontiac, who has 3 A. R. O. adhered to of making use of the highest successes of other breeders of the recent past; hence the many high milk and butter records accredited to this herd.

This herd is directly connected up with the commercial milk supply for the city of Los Angeles.

The owners have been members of the Cow Testing Association since its inception. Eventually every cow in the herd will have her yearly record.

Great Sire at Head of Herd

The leading sire in service is the great bull, Sire Veeman Korndyke Pontiac, who has 3 A. R. O. daughters—one over 20 pounds. His sire is Sir Veeman Hengerveld; his dam, Beatrice Korndyke Pontiac Veeman, with a 7 day record of 30.13 lbs butter fat.

Young bulls sired by Veeman Korndyke Pontiac are now in use from Humboldt County to Imperial County—the entire length of the state.

BURR FARM is Located at E. 26th Street and Downey Road, Los Angeles
GEORGE M. BROWN, Manager

The Next Wheat Crop

By M. E. Bemis

THE 1920 wheat harvest: will it be the bumper crop of 1919, or will the government guarantee be restricted and the acreage consequently reduced?

Of course there are certain areas like the Dakotas and the Canadian Northwest where no great acreage of the wheat fields is likely to be used for any other purpose, but there are also arcas almost as great in the aggregate, scattered over the entire country, which can be used for other crops. The bumper crop of 1919 was due to the large acreage, and the increased acreage, like the floating vote, is elastic, that is, the farmer who has a field that can be diverted to any one of several crops is likely to select the one which promises most profit with least likelihood of monetary loss. The wheat crop this year with the price as guaranteed by the government was the one crop that the farmer could plant with the absolute certainty of making a profit provided he made a fair crop. At planting time, the probable price of any other crop was very much of an uncertainty—an uncertainty that made the growing of the crop a gamble.

It is not the purpose of this article to attempt to make any prophecies of what the next wheat crop will be. It is merely to call attention to the fact that if one puts in wheat, without the certainty of the market price at harvest time, he must in justice to himself take every precaution to see that everything is done which is humanly possible to secure a maximum yield per acre.

There are a number of things which the careful farmer does which help to make a crop certain, and which if neglected mean a distinct monetary loss which could be avoided.

The thorough preparation of the soil is of so much importance and so well understood that to mention this is to invite accusations of vain repetitions. Some little things, however, are of so much importance and so likely to be overlooked that the emphasis of their importance cannot be overdone.

Some years ago one of our best farmers was telling me of an experience that he had. His field was of course thoroughly prepared, everything was done that a careful farmer could and would do. Drilling began and was well nigh finished when he discovered that the springs on the drill were getting weak and not working quite perfectly. To stop and go to town for repairs meant a day's delay, and so, anxious to finish, he neglected it. The result was several sacks per acre less on that part of the field than on the first part. I don't recall now the loss in dollars, but it was considerable, and to him was an apt illustration of the value of little things.

A rather important matter at present is the treatment of grain for smut. Probably most farmers do treat their grain before seeding. Quite a few do this job in a half hearted manner and some get in a hurry and think maybe it won't matter much and let it go.

Last year at the State Experiment Station at Mesa, Arizona, just to see how much good it did to treat the wheat for smut a check field was grown from untreated seed. This seed was from the same field, threshed and cared for and sown the same; no difference except that one had the formalin treatment and one did not. In the field of the treated seed not a head of smut could be found while in the field sown from the untreated seed, fifty per cent of the heads by actual count were smutty.

The method of treating the seed with the formalin treatment is quite simple. One pound of the liquid formalin is used to forty gallons of water. The seed wheat for the next day's seeding is taken out in sacks the afternoon before, and a sack at a time dipped in a barrel containing the solution. The sack is dipped into the barrel and allowed to remain until the liquid has had time to penetrate to the center of the sack so as to wet all the seed. This usually requires about ten minutes. The sack is then removed and laid out on a canvas and another sack dipped and also placed on the canvas, until all the sacks for the next day's seeding are thus treated. The canvas is then folded over the sacks of treated grain, to hold the moisture in by excluding the air. The next morning the canvas is unfolded and the sacks emptied on the canvas. A slight stirring with the wheat spread out rather thin is sufficient to dry out the remaining moisture and the grain is ready for seeding.

The cost is small as compared to the results. I wouldn't want to bet on next year's wheat acreage, but it is a pretty safe gamble that the farmer that sows some wheat, in a well prepared seed bed, using all the care that he knows, will make a profitable crop even if the price takes a tumble from this year's standards.

LAWS AS TO FUR BEARING ANIMALS

"Laws Relating to Fur-Bearing Animals, 1919," Farmers Bulietin 1,079, has just been issued. It gives summary of trapping regulations now in force, open seasons, federal bounties, etc., in the various states. As of special interest to Cultivator readers, we give regulations now in force in California and Arizona.

California

Open Season. No open season for beaver or sea otter. Open season for black or brown bear, ring-tail cat, coon, pine marten, fisher, wolverine, mink, skunk, river otter and fox, October 15 to February 29. Seals and sea lions are protected at all times in game district 19.

Trapping. Trapping license; citizen of United States, fee $1; alien, $2. License issued free to trappers 18 years old or under. Licensed trappers, except those 18 or under, are required to report catch before July 1. Fur animals may be killed at any time when destroying property. Unlawful to use poisons in taking fur animals or to dig or smoke out skunks from dens. Use of gun larger than No. Ten gauge prohibited.

Propagation. No legislation.

Bounties. Mountain lion, female $30; male, $20; paid by state game commission. Board of supervisors of counties may at their discretion fix rate and pay bounty on coyote, wild cat, fox, lynx, bear, or mountain lion. Many counties now pay a bounty on some of these animals, especially on coyotes.

Arizona

Open season. Beaver protected until December 31, 1922. No close season on other fur and predatory animals.

Trapping. State trapping license (fee, $2.50), required of persons over 18 years of age to hunt or trap fur and predatory animals. Issued by warden, designated deputies and clerks of boards of supervisors. License not required for trapping on own land. Predatory and fur animals defined as mountain lion, bear, wolf, coyote, civet and ring-tailed cats, leopard, fox, beaver, otter, badger, fisher, skunk, raccoon, opossum, mink, marten, weasel, muskrat, mole and wood rat. Unlawful to disturb or remove the traps of a licensed trapper who is trapping on the public domain or on lands for which he has permission to trap. Unlawful to use fish or the flesh of any game bird or animal for trap bait. Owner may protect his premises from the depredations of predatory and fur animals at any time. Mountain lion, wolf, fox, coyote, lynx, wild cat, skunk, or other obnoxious animal may be taken on state game preserves only under regulations of the state game warden.

Propagation. Under permit from state game warden, fur-bearing and predatory animals may be kept for propagation, exhibition, or sale.

Bounties. County boards are required to pay for wolf or mountain lion, $10 each; and may pay for coyote, $2; lynx or wild cat, $1; raccoon, 25 cents; jack rabbit, gopher, or prairie dog, five cents.

Copies of this bulletin may be secured free by writing Division of Publications, United States department of Agriculture, Washington, D. C.

Laws relating to deer and other big game, rabbits and squirrels appear in "Game Laws for 1919," Farmers Bulletin 1.077, which may be secured in the same way.

SIXTEEN YEARS OLD AND GOING STRONG

The Tractor & Trailer in its September issue gives photograph of a tractor which was bought in 1903 by an Iowa farmer, and has been in continuous use. The accompanying item says:

"Year after year went by. Taken care of, as any good piece of machinery should be, the tractor growing old in years, but not in looks or ability, came up fresh and capable for each succeeding season's work. At the end of the tenth year it seemed as though the machine must be very near the point of outliving its usefulness.

"Last spring the owner visited the

Why Firestone is Giving Extra Value in Tires

Firestone is giving so much more per dollar this year than the ordinary that our 42,000 dealers want us to tell the public why.

How can Firestone sell the new Standard Oversize Firestone Cord at a normal price?

How can Firestone give the most highly perfected, special molded 3½-inch tire at a price that dealers usually ask for "off brand" kinds?

How can Firestone tubes be sold for less than others of any reputation at all when their very looks and "body" and feel indicate their finer quality and longer mileage?

The answer to all this is Firestone generalship of man power—Firestone organization of brains and capital.

Firestone has built tires since the beginning of motor cars and trucks. Firestone built the first truck tire, and practically all the "firsts" among tire and rim improvements belong to Firestone.

Most Miles per Dollar

Plant No. 1. Capacity 20,000 Tires Daily
This vast plant is now concentrated on Cord Tires and Truck Tires. Its efficiency and capacity have been greatly increased by Plant No. 2.

That's because Firestone has thought farther ahead.

So today, Firestone *is* farther ahead than ever. Year by year Firestone has been laying those foundations of man power and resources which are bearing their biggest fruit in low cost mileage today.

It took Firestone man power to create the factories shown here.

It took Firestone man power to foresee the value of a Firestone organization in Singapore, the source of rubber supply, thereby saving you 3 cents a pound on rubber.

Plant No. 2. Capacity 16,000 Tires Daily
Devoted exclusively to 3½-inch Tires. Firestone is first with a huge separate factory and organization specializing entirely on this tire in greatest demand.

It took Firestone man power to control the fabric from cotton field through the mill, and to design looms for special widths of fabric, thus reducing waste and lowering the cost.

And why is this Firestone organization the most effective in the business?

Because Firestone attracts and holds the men who do things.

90% of Firestone workers own stock in the company. Firestone Park is a unique and attractive home community; the clubhouse plays a real part in the daily life of these workers. The Firestone bank has thousands of depositors. The Firestone insurance fund protects every worker in the organization.

All of these are reasons why Firestone can give more in the Cord Tires, or Fabric Tires, or Truck Tires, or Tubes.

Their personal financial interest in you as a customer makes Firestone men save at every turn, to hold you by giving mileage at lowest cost.

Ask your dealer for a Firestone in your size and type.

Firestone

GET TO THE BOTTOM OF THE DITCH

where there is grass and weeds, and silt and ***TROUBLE.***

Down at the bottom of this space is the machine that does away with both the trouble and the causes—quickly and economically.

The Martin Odgen

A tool for farm use. It makes new ditches—cleans old ones. It builds or tears down borders, dykes and terraces. It grades roads, and moves snow. It works in any kind of soil any place pulling power can be applied.

For HORSE or TRACTOR USE

All-steel construction. Reversible and adjustable blade. A size for every requirement. Each size has wide range of work.

COMPLETE CATALOG FREE. Tell us your earth-moving troubles. We can help.

RHUBARB

WAGNER'S IMPROVED

Plant Now Growers making $1000 and over per acre annually. Splendid results in six months. Special prices for immediate planting. Also berries and small fruit, etc. Write to the originator, J. B. WAGNER, Rhubarb and Berry Specialist, Pasadena, Calif.

factory, and while keenly interested in the more modern design of the current models, is said to have expressed his entire satisfaction to continue the 1903 machine in service, as it was in splendid condition and ready in every way for another season's work.

ODD JOBS FOR TRACTORS

When moving day came round an Illinois farmer called in his trusty tractor. Coupling it up with two wagons equipped with hayracks he loaded on the household goods and the family and with but small effort and in a remarkably short space of time made as good a finished job of this removal as he had been in the habit of making of his plowing.

In a Wisconsin town a heavy gasoline engine was being loaded on to a truck. The heavy engine got just so far up the skids and could be forced no farther. A tractor was brought around into position and, as though it was the easiest task it ever undertook, shoved the massive engine up the skids on to the truck.

THE TRACTOR AT THRESHING TIME

The day of the steam traction engine and the huge threshing machine to take care of the harvest for the entire community is waning rapidly. Enters the small separator, individually owned and tractor operated, to take the place of the old-time "ring" outfit, and shrewd dealers in many communities are selling many tractors as they succeed in convincing the farmer of the wisdom of making the change. Never previously was there such a demand for tractors and small separators, and it has been found impossible to keep up with the orders.

THE POOR MAN'S ORCHID

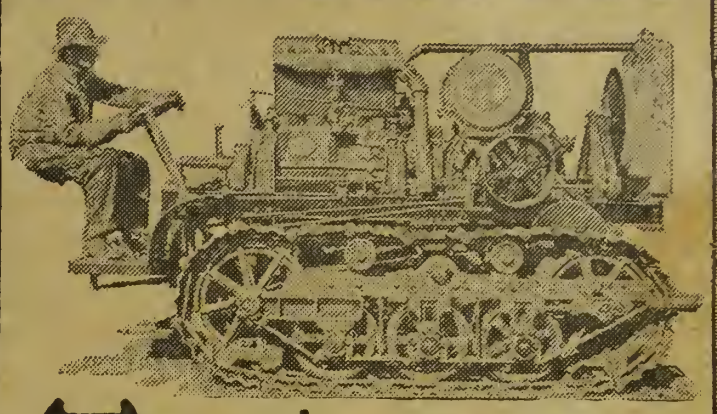
By Ernest Braunton

FANCIERS of iris and of gladioli are both putting forth the claim that their own hobby is the "poor man's orchid." But there is glory enough in either one so that no quarreling should be indulged in and every garden should contain a goodly number of each of these popular and easily grown plants.

Now is the time to plant iris, for they are now most nearly dormant. Every year marks the originating of new and important hybrids and at no time in the world's history have iris been so glorious as now. Even ten years ago there was not nearly such a fine range of color and form as seen in all good collections today. And only in recent years has the iris been sufficiently appreciated to enable specialists to develop iris gardens that handle no other plants. Now the country at large has many great special iris nurseries and California has her share. A very extensive collection is grown in a commercial field between Los Angeles and the sea. One fact has been demonstrated in California and that is that many iris will stand very dry treatment and poor soil and yield magnificently in flowers. In very rich soils some iris get sick and die.

The gladioli, that other poor man's orchid, will not endure drouth but must have a fair water supply and a rich soil if good flowers are to be produced. But they have larger and showier flower spikes than iris and the colors are second to no flowers of the garden. Specialists have carried gladioli to an even higher standard than they have iris and it really seems as if the end of improvement has been reached. The bulbs may be planted from November to July and will produce good flowers with ordinary care. The one best month for planting is no doubt January and nearly all California bulbs are planted within a month on either side of the first one. Commercial flower growers hold a great number in cold storage for late summer planting and the results have been all that was expected for gladioli bulbs are good keepers. If kept in a cool dry place they may even be kept over a season without planting and still produce vigorous growth the next year.

Monarch



TRACTOR TION

The very words are so closely related that you can see the more *traction* it has, the better it is. *Traction* is what counts. Every detail of construction on a MONARCH Tractor is directed toward the ultimate purpose of the machine—to give *traction.*

There is only one way to get proper traction on a tractor—and that is the MONARCH way—by means of the endless MONARCH tread. It grips the ground with an unfailing creep to which hills, grades and loads are no obstacle.

The Monarch Tractor

with the track that laughs at grades and hills

There is no secret to MONARCH success. The cause is self-evident as soon as you look at a MONARCH Tractor. It is built to perform—to give *traction* and it looks the part. It has a combination of mechanical features all designed to give that brand of continuous, reliable service that makes tractor farming an economy.

Let us send you our catalogs and literature explaining the different construction features of the MONARCH Tractor, This will prove to you that it is the logical tractor. No one can afford to buy a tractor without seeing a MONARCH demonstrated. They are now made in the following sizes:

16-9 H. P.—The right size tractor for the average farm. Small enough to be handy for such work as orchard cultivation, powerfull enough to pull from two to three bottoms.

30-18 H. P.—A big brute of a tractor—able to tackle heavy farm and road work. 18 H. P. at drawbar, 30 H. P. on belt pulley.

Do not confuse MONARCH Tractors with the so-called "track-laying" types. The track on the MONARCH is made of wear resisting manganese steel. We guarantee to duplicate for MONARCH Tractors *any written warranty* put out by any other responsible tractor manufacturer.

MONARCH TRACTORS

Write for MONARCH Tractor literature. It gives hard facts in a worth-while fashion. Ask for "PERFORMANCE BOOKLET."

A ROSE TO THE LIVING

A rose to the living is more
Than sumptuous wreaths to the dead;
In filling love's infinite store,
A rose to the living is more,
If graciously given before
The hungering spirit is fled—
A rose to the living is more
Than sumptuous wreaths to the dead.
—Nixon Waterman.

CONTENTMENT

Lord of himself, though not of lands,
And having nothing, yet hath all.
—Sir Henry Wotton.

TOO AMERICAN

By Don Marquis in Milestones

"IS IT a real English cottage?" we asked the agent suspiciously, "or is it one that has been hastily aged to rent to Americans?"

It was the real thing: he vouched for it. It was right in the middle of England. The children could walk for miles in any direction without falling off the edge of England and getting wet.

"See here!" I said. "How many blocks from Scotland is it?"

"Blocks from Scotland?" He didn't understand.

"Yes," I said, "blocks from Scotland." I explained. My wife and I had been trying to get a real English accent. That was one of the things we had come to England for. We wanted to take it back with us and talk it in Brooklyn, and we didn't want to get too near Scotland and get any Scottish dialect mixed up with it. It seemed that the cottage was quite a piece from Scotland. There was a castle not far away — the fifteenth castle on the right side as you go into England. When there wasn't any wind you didn't get a raw sea breeze or hear the ocean vessels whistle.

"Is it overgrown with ivy?" asked Marian, my wife.

Yes, it was ivy-covered. You could scarcely see it for ivy—ivy that was pulling the walls down, ivy as deep-rooted as the hereditary idea.

"Are the drains bad?" I asked.

They were. There would be no trouble on that score. What plumbing there was, was leaky. The roof leaked. There was neither gas nor electricity, nor hot and cold water, nor anything else.

"I suppose this place is rather damp?" I said to the agent. "Is it chilly most of the time? Are the flues defective? Are the floors uneven? Is the place thoroughly uncomfortable and unsanitary and unhabitable in every particular?"

Yes, it had all these advantages. I was about to sign the lease, when my wife plucked me by the sleeve in her impulsive American way. "Is there a bathroom?" she asked.

"My dear Mrs. Minever," said the agent with dignity, "there is not. I can assure you that there are no conveniences of any kind. It is a real English cottage."

I took the place. It was the evening of the third day after we took possession that I discovered that we had been taken in. All the other Americans in that part of England were sitting out in front of their cottages trying to look as if they were accustomed to them, and we—my wife and Uncle Bainbridge and I — were sitting in front of ours trying to act as English as we knew how, when a voice hailed me.

"You are Americans, aren't you, sir?" said the voice.

The voice was anyhow; so we shamefacedly confessed.

"I thought you looked like it," said the voice, and its owner came wavering toward us through the mist.

"What makes you think we look like it?" I said, a trifle annoyed; for it had been my delusion that we had got ourselves to looking quite English— English enough, at least, so that no one could tell us in the faint light.

"Our clothes don't fit us, do they?" asked my wife, nervously.

"They can't fit us," said I, "they were made in London."

I spoke rather sharply, I suppose. And as I was speaking a most astonishing thing happened; the person I had been speaking to suddenly disappeared. He was, and then he was not! I sprang up, and I could tell from my wife's exclamation that she was startled, too. As for Uncle Bainbridge, he seldom gives way to emotion not directly connected with his meals or his money.

"I heard a new American family had moved here," the apparition said timidly, "and I dropped by to ask you sir, do you need a ghost?"

"A ghost? Are you—"

"Yes, sir," with a deprecating smile. "Only an American ghost; but one who would appreciate a situation all the more, sir, for that reason. I don't mind telling you that there's a feeling against us American ghosts here in England, and I've been out of a place for some time. Maybe you have noticed a similar feeling toward Americans? I'm sure, sir, you must have noticed á discrimination, and I just dropped by to see if you wanted a ghost. Being fellow Americans, you know I thought—" His voice trailed off into humble silence, and he stood twisting a shadowy hat round and round his fingers.

"See here!" I said. "Should we have a ghost?"

"Beg pardon, sir, but how much rent do you pay?"

I told him.

He answered politely with decision: "Then, sir, in all fairness, you are entitled to a ghost with the place. It gives a certain tone, sir."

"Why weren't we given one, then?" I asked.

"Well—" he said, and paused. If a ghost can blush with embarrassment, he blushed. "You see," he went on, making it as easy for me as he could, "English ghosts object, mostly to haunting Americans, just as American ghosts find it difficult to get places in English houses and cottages. You see, sir, we are—" He halted lamely, and then finished, "we're so American, somehow, sir."

"But we've been cheated!" I said.

"Yes, sir," said the American ghost, "regularly bad." He said it in quite an English manner, and I complimented him on his achievement. He smiled with a child's delight.

"Would I—do?" he urged again, with a kind of timid insistence.

"I guess," I began, "that—" I was about to say that he would do, when my wife interrupted me.

"We do not want a ghost at all," she said firmly.

"But, my dear—"

She raised her eyebrows at me, and I was silent. After looking from one to the other of us wistfully for a moment, the applicant turned and drifted away, vanishing dejectedly when he reached the gate.

"You heard what he said, Henry?" said my wife as he disappeared. "It is lucky that you have me by you. Do you want to saddle yourself with an American ghost? For my part, I will have an English ghost or none!"

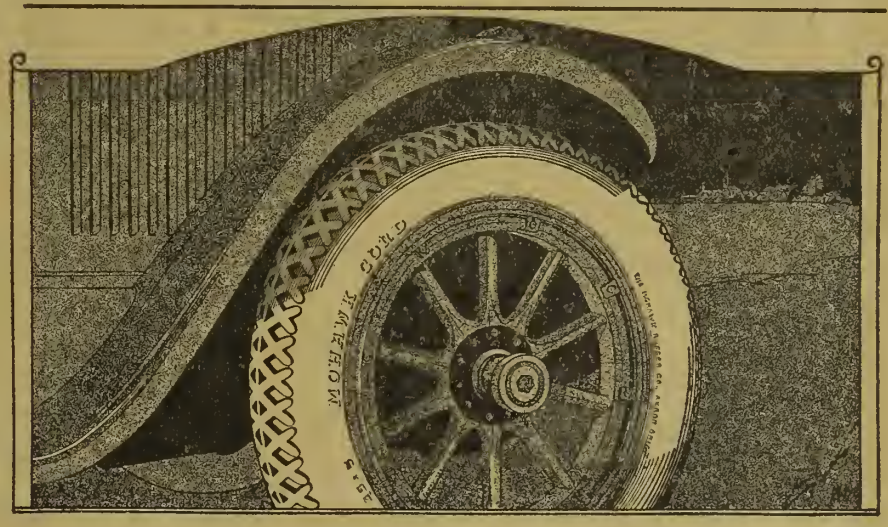
I realized that Marian was right, but I felt sorry for the ghost.

"What did—the fellow—want?" roared Uncle Bainbridge, who is deaf, and brings out his words two or three at a time.

"Wanted to know—if we wanted—a ghost!" I roared in reply.

"Goat? Goat? Huh-huh!" shouted Uncle Bainbridge. "No, sir! Get 'em a pony—and a cart—little cart! That's the best thing for the kids!"

Uncle Bainbridge is, in fact, so deaf that he is never bothered by the noises he makes when he eats. As a rule when you speak to him first he says, "How?" Then he produces a kind of telephone arrangement. He plugs one end into his ear and shoves a black rubber disk at you. You talk against the disk, and when he disagrees with you he pulls the plug out of his ear to stop your foolish chatter, and snorts contemptuously. Once my wife remarked to me that Uncle Bainbridge's hearing might be better if he would only cut those bunches of long gray hair out of his ears. They bother



Greater Economy for Any Country-Driven Car

Whether it's a suit of clothes, a pair of shoes, an automobile, a tractor, or a tire—*quality* is the thing that insures lastingly satisfactory service.

It is Mohawk *quality* that has made Mohawk Tires so popular among the farm communities.

In most sizes of Mohawk Tires, you will find an *extra ply of fabric.* That means longer wear.

In every Mohawk Tire you will find *nothing but pure rubber and pure materials*—no shoddy, no reclaimed rubber, no "fillers". That means that you get more tire for your money when you buy a Mohawk—the Mohawk Cord, for example, weighs from eight to ten pounds more than any other Cord, size for size.

Add to these advantages a hand-made tire, produced by expert tire builders and you will understand why 85% of the motorists who buy their first Mohawk Tire continue to use Mohawks *exclusively.*

Cord or fabric, in ribbed and non-skid treads, and there's an extra ply, hand-made, Ford size Mohawk, too. Good dealers everywhere handle them

MOHAWK RUBBER COMPANY, AKRON, OHIO

MOHAWK "Quality" TIRES HAND MADE

Mayer HONORBILT SHOES

MILWAUKEE Mayer TRADE-MARK CUSTOM MADE HONORBILT

For the Whole Family

DRESS up shoes for everybody, work shoes, school shoes for the children and easy restful house shoes. *Honorbilt* Shoes contain the same good quality leathers they did 38 years ago; they are *built on honor.* The name *Honorbilt* stands for a heaping measure of service. Wear a pair and prove it for yourself.

Men's and Women's Fine Shoes

The fine shoes are all that anybody could ask for in style and you get choicest leather plus genuine comfort. You are sure to find the particular shape you want and always the latest styles, and a wide variety.

Work Shoes

Honorbilt Work Shoe leather is double tanned to resist the alkali in the soil, as well as barnyard juices. They are soft and easy on the feet yet long wearing and will not get hard when wet. Honorbilt Work Shoes will give double the wear of ordinary shoes.

Children's Shoes

Sturdy, well-built shoes that stand rough treatment—the kind boys and girls like, and their parents, too. Shaped for growing feet. The quality is there—*they wear like iron.*

No matter who in your family needs a pair of shoes next, see your dealer who handles the Mayer Honorbilt line. Look for the name *Honorbilt* on the soles.

everyone except Uncle Bainbridge a great deal. But the plug was in, after all, and he heard her, and asked one of the children in a terrible voice to fetch him the tin-box he keeps his will in.

Uncle Bainbridge is my uncle. My wife reminds me of that every now and then. And he is rather hard to live with. But Marian, in spite of his little idiosyncrasies, has always been generous enough to wish to protect him from designing females only too ready to marry him for his money. So she encouraged him to make his home with us. If he married at all, she preferred that he should marry her cousin, Miss Sophia Calderwood. That was also Miss Sophia's preference.

We did get a ghost, however, and a real English ghost. The discovery was mine. I was sitting in the room we called library one night, alone with my pipe, when I heard a couple of raps in, on, about, or behind a large bookcase across the room. It was several days after we had refused the American applicant, and I had been thinking of him more or less and I suppose my reflections had disposed my mind to psychic receptivity, for when I heard raps I said at once:

"Are there any good spirits in the room?" It is a formula I remembered from the days when I had been greatly interested in psychic research.

Rap! rap! came the answer from behind the bookcase.

I made a tour of the room and satisfied myself that it was not a flapping curtain or anything like that.

"Do you have a message for me?" I asked.

The answer was in the affirmative.

"What is it?"

There was a confused and rapid jumble of raps. I repeated the question with the same result.

"Can you materialize?"

The ghost rapped no.

Then it occurred to me that probably this was a ghost of the sort that can communicate with the visible world only through replying to such questions as can be answered by yes or no. There are a great many of these ghosts. Indeed, my experience in psychic research has led me to the conclusion that they are in the majority.

"Were you sent down by the agent to take this place?" I asked.

"No!" It is impossible to convey in print the suggestion of hauteur and offended dignity that the ghost managed to get into that single rap. I have never felt more rebuked in my life; I have never been made to feel more American.

(Continued next week.)

A NEW TRICK IN MAKING OLD CLOTHES NEW

By Ruth Dougherty

It may not be a new trick to some, but I know it is to many. It is a trick in steaming, told me by my dressmaker.

She is some dressmaker, by the way, for she takes an artist's delight in assembling old materials into up-to-date garments. She was engaged in making respectable an old Bolivia cloth coat that had seen many seasons wear. It was relined, the worn edges of cuffs and collar turned under, pockets reinforced, and the old coat began to take on quite a self respecting air; that is in front; the back was hopelessly crushed and dejected looking, for it had been sat upon and leaned against until its age was proclaimed in every tired thread. A visit to the professional cleaner always chirked it up for a few days, but it soon took on again its weary slump.

"No use having it steamed again," I said. "It doesn't stay up long enough to pay."

"Hang it over the tub the next time you take a bath and brush it up while it's damp."

I did better than that; I filled the bath tub with scalding water, hung the coat on the curtain rod above, closed window and door and let it steam for at least 15 minutes, then, whisk broom in hand, entered and brushed it up. The result was so encouraging that the old coat was left in the room till the water cooled, being thoroughly brushed up several times during the period. It looked like new—almost.

Simple, isn't it, and easy!

To Make Homes Better and House Work Lighter

is considered the most important duty of this great Home-Making Institution. For over 39 years we have enjoyed active, sincere participation and cooperation in the planning and creating of better and more beautiful homes in California and the West generally.

We have created through our experience a great reserve of Home-making Ideas and Plans. To make these Ideas and Plans available in usable, enjoyable form we print each year literally scores of Folders, Booklets and Catalogs (as well as several distinctive Magazines) any and all of which are sent anywhere free and without obligation on request.

Barker Bros. consider it a part of their duty to give careful detailed answers and suggestions by mail to all questions about home furnishing, coming by mail. It is your welcome privilege to write us for information on any particular Home subject in which you are interested.

Or if you wish to receive our Magazines and Special Literature as issued from time to time, just say:

"Put my name on your mailing list."

To keep thoroughly posted subscribers should read every advertisement in the California Cultivator columns.

An old black velvet hat has just been renewed in the same way, a poor old hat that had served three winters and been caught in several rain storms. Now it's bright and happy, looking forward to its fourth year of active life.

WHY TWENTY CENTS MORE?

Last week I was spending my vacation in a little mountain town. All groceries and dry goods sold there came by truck from the city 60 miles away. On the counter of one of the general stores I noticed a beautiful piece of romper cloth of a widely advertised make. It was priced at 40 cents. The same thing I had seen in Los Angeles for 50 cents. Thinks I, "I wonder why they can sell it ten cents cheaper here, 60 miles from the railroad?"

Yesterday I was in one of the big dry goods stores in Los Angeles and curiosity prompted me to look up that same material. The price had been changed ten cents; it was no longer 50 cents but 60 cents! Why?

And is there anything we can do about it?

Several years ago the prophet Haggai said to the Jewish people: "He that earneth wages earneth wages to put it into a bag with holes." There seem to be some expert punchers of holes abroad in the land, with itching palms held beneath those holey sacks to catch the hard earned wages.—R. D.

MORE GOOD CAKES

Subscriber, Lindsay

We have been taking your weekly ever since we have been on a ranch, now over four years, and feel that it's a necessity. The first thing I do when it comes is to turn to the household department to see if I can find something new to cook. I have already made a large cook book of the good recipes and hints to housekeepers. I have the misfortune to be paralyzed on my right side which has made a "shut in" of me for several years. Not having the use of my right hand, I soon learned to write with my left only with pencil, though I read and write a great deal and do most of my own work which keeps me contented and happy at home. I have a cake recipe which I use a great deal, because it's simple and inexpensive, which I will pass on.

Coffee Cake: Two eggs, one cup of sugar, tablespoon any kind of fat (butter I think best). Stir this well, then alternate two cups flour with two cups of milk. Lastly add one generous teaspoon baking powder and flavor to taste. Divide this into two jelly tins and put on top of each part the following: With the tips of the fingers mix one cup brown sugar, one tablespoon cinnamon and lump of butter size of a walnut. Sprinkle generously on top of each cake.

(If "Subscriber, Lindsay" will send name and address the Cultivator will credit extension of subscription.)

Subscriber, Los Angeles

Good Cake Without Eggs: Two cups hot water, two cups brown sugar, two tablespoons lard, one package raisins, one teaspoon salt, one teaspoon each cinnamon and cloves.

Boil all these ingredients together for five minutes after they begin to bubble. When cold add one teaspoon soda dissolved in teaspoon hot water, three cups flour with two teaspoons baking powder. Bake in two loaves for 45 minutes in moderate oven.

SPICED GRAPES

Four quarts of grapes removed from stems and cut in halves. Boil until seeds have all been removed by skimming from surface. Then add three and one-half pounds brown sugar, one-half pint vinegar, one tablespoon cinnamon and one-half tablespoon each cloves and allspice. Boil slowly until soft and about the consistency of jam.

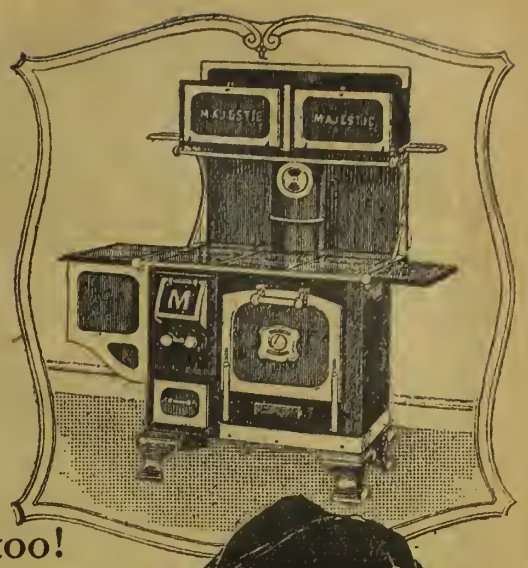
DAYLIGHT SAVING ENDS

The clocks will all be turned back one hour on the last Sunday in October, probably for the last time, as the daylight saving act has been repealed. Two o'clock A. M., Sunday, October 26, is the time.

Eggs at Petaluma are quoted at 72 cents, the highest price known there.

Hot water —A plenty!

Just dip the boiling hot water whenever you need it, from the all-copper reservoir on the side of your Majestic Range. Reservoir top is level with range top, giving extra space. Patented heat pocket of reservoir fits directly against fire box —and convenient shifting lever moves reservoir close to fire, or away, controlling temperature of water.



Perfect baking, too!

Air-tight oven, all joints riveted, economizes fuel and assures delightful baking results. Large warming closets at top. Unbreakable malleable iron frame saves repairs. Pure charcoal iron body, best known rust-resisting material. Burnished cooking top requires no polish. Trimmings of smooth gleaming nickel. Whole range so easy to keep clean and bright.

Door panels and splasher back in lustrous Blue Enamel or White Enamel finish, if desired.

The Majestic Range is made in many styles and sizes—every style the highest range value obtainable at its price. Majestic prices the same everywhere—freight considered.

There is a Majestic dealer in nearly every county in 42 states.

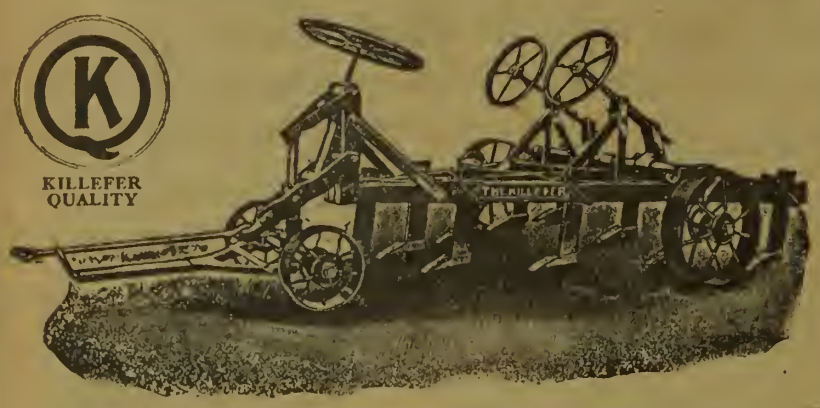
8 Ft. Extra Heavy
TRACTOR CHISEL



Now is the time to commence deep chiseling and subsoiling. Do it in time to prepare the ground thoroughly to receive the benefit of the winter rains. Break away from the old habit or mistaken idea of scratching the ground and expecting to harvest a crop.

Plow pan, although frequently referred to as mechanical hardpan, should not be confused with natural hardpan. However, so far as crop production is concerned, the effects of plow sole and hardpan are the same. Both must be destroyed before proper cultivation can be had, and the only difference in the two that will be considered here is in the method required for their destruction.

Plow sole offers less resistance to the available methods of breaking it up than hardpan, and, with the tractor and tool of sufficient strength now available for tractor use, it can be broken up and subdued, bringing the land back to the point where a full yield may be expected.

Plow sole offers less resistance to tillage implements than does hardpan; both are in many cases impervious to horse teams and ordinary plows and in some instances are difficult of handling with tractors and modern implements. Yet before a full yield may be expected this condition must be subdued, and to date the only satisfactory means is by use of the chisel or subsoiler.

Stock Hay	8.00@12.00
No. 1 Barley Straw, bale	.50@80

Citrus Markets

Los Angeles, Oct. 15, 1919.

The demand for Valencias is holding up exceptionally well, and every promise now is that the nearly 3,000 cars yet to go will command satisfactory price. The stock in hand is gratifying in view of the fact that Navels will be rather late. Valencias are now commanding around $5 to $5.25 f. o. b. California points. Floridas are arriving contrary to the effort of many shippers in the state to prevent shipping in of green stuff.

The lemon market is also strong, running around $6.50 f. o. b. shipping points.

Shipments

Shipments of oranges from Southern California to date since November 1, 1918: 33,688 cars, lemons 9,410, total 43,098. To same date last season: oranges 14,157, lemons 5,762, total 19,919. Central California this season: Oranges, 4,427, lemons 354, total 4,781. To same date last season: oranges, 2,539, lemons 115, total 2,654. Northern California: oranges, 244, lemons 2, total 246. Last year same date: oranges, 203.

BRADSHAW TO SELL HOLSTEINS

J. R. Bradshaw, Phoenix, Arizona, president of Arizona Holstein Breeders Association, has decided to disperse his famous herd of registered Holsteins at public sale, owing to the demands made upon his time by his many other business interests. The herd numbers about 100 head, the females being mostly daughters of a 36 pound bull, with some daughters of Roderick Lincoln and Johanna McKinley Segis.

The outstanding feature of the sale will be the herd sire King Lilith Pontiac Segis and all of his daughters. This royally bred bull is a full brother to Senator Hackney's famous sire King Segis Pontiac Conut, whose daughters have broken more than 100 world's records within the past few years. King Lilith Pontiac Segis is only a four year old, is a high class individual nearly white in color and his calves are especially promising. All the bred females in the sale are in calf to him. The sale will be held near Los Angeles on Thursday, December 4, under the management of California Breeders Sales and Pedigree Co. Rhoades & Rhoades will be the auctioneers.

DISPERSAL SALE OF
Registered Holstein Friesian-Cattle

Wednesday & Thursday November 5th & 6th, 1919

100 Young Registered Holstein-Friesian Cows 100

63 of them now on Year's Test. Many have made creditable Milk and Butter Records.

A large number are bred to our great Herd Sire—Finderne Soldene Pontiac Valdessa, a son of a World's Record Cow, and whose Sire's Dam and Granddam are Both World's Record Cows.

They are sired by 52 different well bred Eastern Sires, carrying the Blood that has made the Holstein Breed famous for Milk and Butter production.

These cows were carefully selected for Our Foundation Herd. Not one over three years old. They are increasing in value each year. Their Milk and Butter Production will still increase.

YOUR OPPORTUNITY to get started Right with Eastern Bred Registered Holstein-Friesian Cattle, that are getting better. Come before the sale and see this grand lot of Registered Cows—See their Records—See their CALVES. We are keeping their calves.

ALL TUBERCULIN TESTED. Write for Sale Catalog.

Turn Waste Into Power

A motor with poor piston rings is like a steaming teakettle—it lets power escape unused. A loss at every stroke of the piston.

Stop this drain—convert your waste into power. Install a full set of

McQUAY-NORRIS
LEAK-PROOF
PISTON RINGS

Increase Power—Decrease Carbon
Save Gas

The rings with a record of eight years successful performance behind them. Power producers because they create uniform action all around the cylinder wall, leaving no place for the power to slip past.

Wherever you are you can get McQuay-Norris LEAK-PROOF Piston Rings to fit any car, truck and tractor. Jobbers and supply houses in over 300 distributing points carry complete stocks of standard sizes and over-sizes, backed by a factory stock of 3,000 unusual sizes. The rings are ready, awaiting your order.

Send for Free Booklet
"To Have and to Hold Power"—a simple, clear explanation of piston rings, their construction and operation.

McQUAY-NORRIS
Superoyl
RINGS

A special ring for engines that pump oil. Used in top groove only of pistons to control excess oil, with McQuay-Norris LEAK-PROOF Rings in lower grooves to insure maximum compression and fuel economy.

Semi-Solid Buttermilk

Makes 'Em Grow Fast

Feed your hogs and poultry semi-solid buttermilk. It keeps them healthy and gets them to market earlier.

Semi-solid buttermilk is pure creamery buttermilk, with nothing added—only the water is taken away. It is not modified by the addition of sulphuric acid or any other preservative. Its own NATURAL LACTIC ACID keeps it fresh.

We Guarantee Every Barrel of Semi-Solid Buttermilk.

We guarantee that semi-solid buttermilk is pure and unadulterated, sterilized and pasteurized. It is a SAFE feed, and you will be satisfied with the results from feeding it.

Saves Grain, Saves Time, Saves Money

Safes GRAIN, because it balances the grain ration. Saves TIME because hogs and poultry fatten quicker when fed semi-solid. Saves MONEY because you don't psy freight on the water content of the buttermilk, and you don't have to feed so much high-priced corn.

Semi-Solid Buttermilk Is Essential

for BABY CHICKS; raises every one; keeps them healthy and vigorous. No sickly or dead chicks.

TRY IT.

FOR LAYING HENS—The egg production increases at an astonishing rate. Keep accurate account, and TRY IT.

POULTRY FOR MARKETS—Milk-fed chickens reach market first, with choice, firm, white flesh. TRY IT.

We know what SEMI-SOLID BUTTERMILK will do. Don't be skeptical, but try it, to be convinced.

Twenty carloads were sold in Petaluma district during 1918. Semi-solid buttermilk is put up in 500-lb. barrels, half barrels, quarter barrels and 10-gal. kegs. Have buttermilk when you want it. Semi-solid keeps in any climate, any length of time.

Order from your dealer. If he can not supply you, send your order to Dill-Crosett, Inc., 235 Pine St., San Francisco, and we will supply you direct from our factory at Benecia, California. You pay on receipt of the goods.

California Cultivator

Costs Only $1.00 Yearly

As to Brooder Houses

By Jean A. Koethen

THERE is no more encouraging sign of the increasing interest in better stock and equipment than the inquiries which are already coming in regarding preparations for hatching. Fall is the time for looking ahead and getting things in order for the January hatch. If there are to be January chicks the incubators must be started in December or at the latest by New Years. Pens should be marked at least a month before this, and planning begins in October.

A Cultivator reader writes for the description of "a small brooder house which I could install myself, one that would be cheap, effective and simple and would accommodate three or four hundred chicks," and the cost of installation.

Cost figures at present are out of the question. All building materials cost more than they did a year ago, and they may cost more by the time this is in print.

Figure 1. Typical Brooder House

May be built of either battened boards or tongue and groove lumber, and of any length. May be roofed with shingles or with rough boards covered with tar paper.

Two Types of House

Two types of brooder house have been in general use for some years; the long house, which is used with the hot water pipe brooding system, and and the square or nearly square house in which heat is provided by large gasoline or distillate stoves.

The long brooder house is of the type shown in Figure One. It may have three windows or half a dozen or as many more as one likes, and each window may consist of a single sash or of two. The point is that plenty of sunshine be allowed to enter the two or three foot run which is behind the window and is designed to accommodate from 50 to 100 chicks according to the size of brooder used, Many poultry men install 100 chick brooders at the inside end of these runs, but put only 50 chicks into them, for 100 chicks is the very outside limit of the capacity of a 100 chick brooder. If so many are put in part of the brood must be moved very soon.

The house in the illustration is about 18 feet long by eight or ten feet deep. If filled to capacity it would hold 600 chicks. The plan followed by poultry men who raise a large number of chicks in such a house is to have a large number of runs, some wider than others. When the chicks come from the incubator they are placed in the small brooder runs, 600 in each. After two or three weeks, when they begin to crowd the brooder, they are moved to two larger runs, and the small one refilled with little chicks. I have seen long houses containing 20 or more such runs, all filled with chicks of various ages. In a large house, an alley runs through the middle. In a small one it is at the rear of the brooders.

No one should attempt to install such a brooder house as this from a printed description. One can only get an adequate idea of it by examination and it would be better to see more than one, for every poultry man has ideas of his own and works them out as best he can.

The square house which is heated by a large brooder stove may be eight by ten feet or a little larger. Bulletins describing this method of brooding have been issued by the Cornell station at Ithaca, New York, the Iowa station at Ames, the California station at Berkeley, and probably by every other station. Since gasoline and distillate became so dear and of such poor quality these large stoves are being discarded by many who thought highly of them before, and their users are turning to electricity or to fireless brooding. The same objection applies to the hot water brooders for they are heated as a rule by gasoline and distillate stoves, but the heat is a little more easily controlled, perhaps, than in stove brooding.

I remember visiting a ranch last winter when the owner had taken out

Figure 2. Home-made Brooder Coop

Warmed by sunshine and one electric globe. Is cheap, effective and simple.

Greatest trappers' contest ever offered—coste nothing to enter—write today for particulars.

Abraham "Smoke Pump" is the greatest device for "smoking-'em-out" ever invented. One can of Abraham Improved "Smoke Powder" goes with every Smoke Pump. Instructions how to uee our Smoke Pump and reasons why ordinary smokers are not successful sent with every order. Price $2.00 postpaid.

Free Fur Facts and Trappers' Supply Catalog

You must have this new book "Fur Facts." Contains good trapping stories by Geo. J. Tneissen and others and valuable information. You get our new catalog free also. Best hunters' and trappers' guide published. Not a penny to pay for it. Gives you lowest prices on supplies—Traps, Guns, Knives, Hunting Coats, Heavy Coats, Suits for all weather, Fox Horns, Turkey and Duck Calls—everything you want for trapping.

Weekly Reports —Also Free

We will put your name on our mailing list for Abraham's Weekly Reports. They keep you posted—right up-to-date on prices, etc.

Just a post card—that's all you need to get all this—FREE—Fur Facts, the Catalog and the Weekly Reports. And don't forget the Pump. Ask for offer on that. Now get your post card into the mail—quick.

Why Hens Won't Lay When Eggs Are High Priced

They miss the green of a summer diet, they become lazy laggards, have not the vitality to molt quickly, or digest properly the usual feed. They lack the ability to exercise, and eat and drink what you give them without relish. Laymore, the greatest Egg Tonic, persists in making layers out of winter laggards. It adds to their vitality, sharpens their appetite, and tones up the laying organs without force or injury.

Two full packages is sufficient for 100 hens three months, and cost but $1.00

(delivery charges and war tax paid.) Guaranteed to give results or money refunded. Write today to Mayer's Hatchery, 213 First Ave. N., Route 36, Minneapolis, Minn., for these two packages, and it is not necessary to send any money with the order. Simply say, "I'll pay when the packages arrive," and delivery charges will be paid.

Eggo-O-Latum Keeps Eggs One Year

It costs only one cent per dozen eggs to use Egg-o-latum. There is no other expense. Eggs are kept in carton or box in cellar. Eggs may be boiled, poached or used in any other way, just like fresh eggs. Simply rubbed on the eggs—a dozen per minute. A 50c jar is sufficient for 50 dozen eggs. At Drug, Seed and Poultry Supply Stores or postpaid.

his entire hot water brooder system and installed electricity. One of his reasons for this was the poor quality of the fuel.

On another ranch I saw a brooder house, similar to that in Figure One, only more simple. In fact, it was just the plainest shed-roofed structure with large windows on the south. This house was divided into four or five little runs for chicks of different ages, and each run had its own brooder stove, a good sized one for the littlest chicks and smaller ones for the oldest chicks. I think these were coal stoves but am not certain. If they were not they might have been.

A Home Made Brooder House

Now, I have my suspicions that my correspondent wants, for his 300 or 400 chicks something more simple and economical than any I have mentioned, and he will find it illustrated in Figure Two.

This is a little house which the owner told me was built a year ago for about $20. If it were built by itself instead of against another building it would cost a little more. It is about six feet long by three feet deep and not over four feet high at the highest point.

The swinging door, which is hinged at the gable, may be closed, leaving the chicks only the sunshine that comes through the glass at the end of each run, or it may be wide open, according to the weather. The runs are about 20 inches long, and at the rear end of each is a simple brooder box 12 or 13 inches square, covered with a quilt. The only heat in this brooder house, beside the heat of the sun comes from a large electric light globe. When the door is closed at night and the light turned on the chicks are very comfortable.

I am not sure that such a house would be warm enough in dark, foggy or rainy weather, but it works admirably in sunny weather.

NATIONAL EGG LAYING CONTEST

Mountain Grove, Missouri, report for September. The total number of eggs laid in September was 3,794, or an average of 12.65 per hen. A pen of Rhode Island Whites from Connecticut won the cup for September by laying 108 eggs during the month.

The leading pens of each variety for September were:

R. I. Whites, Connecticut, 108 eggs; White Wyandottes, Missouri, 103; Buff Leghorns, Missouri, 93; Barred Rocks, Missouri, 88; White Rocks, Missouri, 87; Brown Leghorns, Missouri, 85; Anconas, Missouri, 84; Buff Wyandottes, Vermont, 84; Silver Wyandottes, Missouri, 83; S. C. Reds, Iowa, 83; S. C. White Leghorns, Missouri, 75; R. C. White Leghorns, Missouri, 73; Black Langshans, Missouri, 65; Buff Orpingtons, Missouri, 63.

The ten leading pens to date are: R. I. Whites, Connecticut, 1,147 eggs; R. I. Whites, Missouri, 1,111; R. C. White Leghorns, Missouri, 1,095; R. C. White Leghorns, Missouri, 1,070; White Rocks, Missouri, 1,070; White Rocks, Missouri, 1,020; White Wyandottes, Illinois, 1,012; Silver Wyandottes, Missouri, 980; Anconas, Missouri, 976; Brown Leghorns, Kansas, 965.

DIP THAT CHICK!

"Dip that chick!" It isn't done just for the sake of making a rhyme for "dip that tick," either. Dipping chickens is likely to become more general than dipping cattle, because the chicken louse is a more widely distributed insect than the cattle tick. The "dip" consists of one ounce of sodium fluoride to the gallon of water, which should be at a temperature of 70 to 85 degrees. The dipping should be done on a clear, warm day—never on a cold day. The old way of getting rid of chicken lice was by dusting with dry sodium fluoride. It was effective, but in the case of large flocks it was slow and wasteful, a great deal of the dusting material being inevitably lost.

THE POINTS OF LIKENESS

"Can you tell me why a clock is like a vain, pretty woman?"

"I guess it is because it is all face and figure, has no head to speak of, is hard to stop when once it is wound up, and has a striking way of calling attention to itself every hour in the day."

MALTHOID *and* RU-BER-OID READY ROOFINGS

Ten years from now

You can judge the quality of ready roofing only after it has been tested in actual use. When you buy it, you must rely for your selection upon the experience of others and the reputation of the manufacturer.

The ideal of The Paraffine Companies is to make Malthoid and Ru-ber-oid the best ready roofings that can be made. The Company has succeeded, as has been proved thousands of times under widely varying conditions of climate and use.

If you roof your farm buildings or home or factory with Malthoid or Ru-ber-oid, in ten years from now you will *know* why it has become the recognized standard of ready roofing. Malthoid and Ru-ber-oid are made to last. They will not dry out or rot and they are particularly fire-resistant. If painted every few years, they will give good service indefinitely. Malthoid and Ru-ber-oid have met successfully every test of time and service to which they have been subjected.

The reputation of The Paraffine Companies stands back of Malthoid and Ru-ber-oid. They are the best ready roofings that we know how to make.

Site of the Iron Canyon Dam, Tehama County

Iron Canyon is more than an irrigation project; it is a hydro electric power project and a flood control project as well, designed not merely to develop one of the uses of the great dam site on the Sacramento River at that point but to coordinate several uses. The plan of development proposed includes a power plant of 70,000 horse power gross capacity. The Reclamation Service report (1914) estimated a net annual return from this feature of $610,000 or 5.87 per cent on the entire cost of dam and reservoir with power plant installation and flood control gates ($10,385,000.)

More than 13,000 men are building your Maxwell

IMAGINE 13,000 men devoting themselves to a single Maxwell. Yet that is the picture which a little journey through the eight great Maxwell plants supplies.

If they built but that one car in a day its cost to you would represent a king's ransom.

But they are so well organized, their work so very definite, they are so expert in the special one thing they do, and they are aided by so many thousands of uncanny and superhuman machines, whose accuracy is down to 1/1000 of an inch, that you pay but a small price for a Maxwell.

A great aid to the economy of manufacture is the use of many, many millions of dollars so that a 10-cent piece saved on a bit of material often runs into amazing figures.

Thus the big staff of purchasing experts for Maxwell become your purchasing experts and the saving goes on to you in the price.

$985 is indeed a small sum to pay for a great value in a great car like Maxwell.

California for Americans---or Japanese?

Views of the Press and People of California

DID American pioneers reclaim California's hills and valleys and develop the wonderful resources of the state to make a Japanese province? This question may seem, in the eyes of some of our Eastern friends, to exaggerate the situation. Some of them think that California is having a fit of hysterics.

Fortunately, the number, even in the East, who refuse to open their eyes to the menace to the American nation is growing less every day. The facts which have been made known through the public press in the utterances of Senator Phelan and others have been educational, and in some sections of the East at least the question, "Why this outcry?" is receiving some serious study.

An answer will be given at the next meeting of the state legislature, if not sooner, by a commission appointed by Governor Stephens to investigate the situation in California. Its findings will also be forwarded to the national congress for its use in determining whether to maintain a strong Pacific fleet and possibly to bring about a change in the constitution of the United States.

The state market director of California has found that 90 per cent of the acreage in this state devoted to vegetable seed growing is now in the hands of Japanese farmers. He has given notice of the organization of the Japanese Agricultural Association which will largely control the beet, carrot, onion and tomato output of the state.

Americans Balk.

The president of the Fourteen Counties (Sacramento Valley) Association in a recent issue of the Colusa Sun cites the fact that "40 per cent of Northern California rice is controlled by Japanese and in Colusa many of the big stores are owned by the Orientals. No more white people are taking up dwellings in Placer County, where there are two Japanese births to one increase in the white population.

"The native Americans balk at remaining in communities infested by Japanese squalor and Japanese morals."

Senator Phelan has estimated that of the 150,000 Japanese in the United States 100,000 live in California. Another 110,000 occupy the Hawaiian Islands. An investigator has found [illegible] with a birth rate in California h[illegible]at of today the Japanese will in[illegible]se so that in 140 years there wi[illegible] be 100,000,000 in the United States—and this without further immigration.

McClatchie Says

McClatchie of the Sacramento Bee says:

"The reasons are that 90 per cent of the Japanese admitted to the United States in the past 20 years were between 14 and 44 years of age. They were in the vigor of life, and with imported 'picture brides' and the incentive of American citizenship for native born, established a high birth rate. The clearly defined policy of Japan in 'peaceful penetration' of this country will continue to send over the same class of immigrants who will rapidly reproduce; and conditions here as to land ownership and control will encourage such increase. The continued influx of this vigorous element alone would maintain among the Japanese here a higher birth rate than in Japan, and when the Japanese birth rate here drops to the standard in Japan, or even lower, it will still be far above the average white birth rate here."

"Scrap of Paper"

Seeking information regarding the industrial invasion, the senate committee on immigratioon asked the federal commissioner on immigration, Mr. Caminetti, for a report, and he submitted the following report signed by John W. Abercombie, assistant secretary of labor, to the effect that during the 12 months ending June 30, 1919, the agents of the federal government apprehended 9678 Japanese who were in the country illegally and secured their deportation.

"Those figures refer to the ones caught and convicted; it is fair to assume that at least an equal number escaped detection and were added to the constantly swelling Japanese population of the Pacific States. No account is taken of the number of picture brides who arrived and are diligently following the biblical injunction to be fruitful and multiply."

More Gentleman's Agreement

On this the Los Angeles Times makes editorial comment:

"No federal census of the Japanese population of California has been taken since 1910; but that federal report concerning the number of deportations should be in itself convincing proof that the 'gentlemen's agreement' restricting Japanese immigration is worth about as much as a peace treaty signed by a Hohenzollern. Without attempting to fix the blame, the facts are that within 12 months nearly 10,000 Japanese were found in this country who had violated that agreement. The methods taken by the Japanese government to prevent violation have been indisputably ineffective.

"Since the federal census there has been a rise of 1000 per cent in the Japanese birth rate in California and an estimated increase of 1500 per cent in the acreage owned or leased by Japanese in this state. Such evidences of a Japanese industrial invasion are indisputable. The records of the state health office show that nearly 5000 children of Japanese parentage were born in California during the last 12 months. When that 'gentlemen's agreement' was supposed to go into effect the number of children of Japanese parentage born annually in the state was less than 200."

3000 Per Cent

The Lodi News says: "The swiftness with which Japan is populating California is given an example in the county's records for the past six months. Of the 282 children born in San Joaquin since January 1, 104 were Japanese.

"The Japanese births in California have increased 3000 per cent since 1900.

"San Joaquin County is not alone in having the Japanese births exceed the American births. Los Angeles County has the same condition, according to recent figures.

"A meeting of the Fourteen Counties Association has been called to take up plans to check Oriental operations. It is pointed out by members of this organization that the anti-Japanese land laws have proved useless. In the first place, the Japanese, unable to buy land, formed corporations with dummy white directors. This worked very well."

A Concrete Example

Only last week, in a Stockton bank, a Japanese and his wife asked for $1000 credit.

"What do you wish it for?" asked the cashier.

"To buy some land," replied the Japanese.

"You can't do that, for it's against the law," said the banker.

"My wife, she have baby in a few months. Then we buy land," the Japanese said.

Suggestions

McClatchie's investigations have led him to make the following suggestions:

"The evils from continued Japanese immigration, either under the present agreement with Japan or under a percentage admission plan, with citizenship, as proposed by the League for Constructive Immigration Legislation, are so serious that only prompt and decisive measures will be of avail. Temporizing with the problem will inevitably lead to the continued absorbing of communities and industries by the Japanese, as already commenced on the Pacific coast. The white race is helpless against the economic competition, high birth rate and unassimilable character of the Japanese, if admitted to this country.

"These, then are the proposed remedies. Less drastic measures will not avail:

"1. Cancellation of the 'Gentlemen's Agreement.'

"This agreement was entered into for the avowed purpose of keeping Japanese labor, skilled and unskilled, out of continental United States. Its letter and its spirit are being grossly violated. Even if they were not, the fact that the Japanese population of the United States has increased sixfold since 1900 while the Chinese population has decreased over one-half, is sufficient proof that the agreement is not filling its avowed purpose of Japanese exclusion, and that it should be abrogated.

"2. Exclusion of 'picture brides.'

"They are being used for breeding purposes in carrying out Japan's clearly defined policy of 'peacefully penetrating' the United States.

"3. Rigorous exclusion of Japanese immigrants.

"Let us follow in this matter the example set by Canada and Australia and keep them out.

"4. Confirmation and legalization of the policy that Asiatics shall be forever barred from American citizenship.

"5. Amendment to Section 1 of Article 14 of the federal constitution providing that no child born in the United States of foreign parents shall be considered an American citizen unless both parents are of a race that is eligible to citizenship.

"It is certainly inconsistent to concede that a Japanese who comes to this country at one year of age is undesirable material for American citizenship, and yet confer such citizenship unasked on the Japanese who is born here.

"6. Provide such labor as may be necessary for the development and prosperity of the country, and which cannot be had here or secured from desirable immigration, by bringing in Chinese for a fixed term of years, confining their activities to certain localities and certain industries so that they cannot offer an economic menace to American labor, and send them back to China when the need for their services has ceased."

In Imperial

Editor E. F. Howe of the Imperial Valley has recommended the formation of an alien regulation league. His suggestion is to secure enactment by the legislatures of the several states providing "that the sheriff of any county, when due evidence is presented to him that any one alien race in any city ward, any township or any other political subdivision in the state under his jurisdiction numbers in excess of five per cent of the total population of that political subdivision, shall issue a proclamation setting forth that fact, naming the alien race which exceeds five per cent of the population, and thereafter, until that alien race is under five per cent of the population (when the said sheriff shall annul his proclamation by issuing a new proclamation in accordance with the facts) it shall be illegal for the owner of any land or building to rent or lease to any such alien or permit to be occupied by any such alien for more than one year following such proclamation, any such property; and any lease to such alien previously made shall not be construed as permitting personal occupancy beyond the period of one year from said proclamation; it shall also

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

THIS WEEK'S COVER

There is a wonderful amount of information to be secured by studying a map of California, especially a relief map. It becomes quickly apparent that this state has largely given up its surface to mountains. When we note the wonderful productivity of California's soils under California's sun we sometimes regret the waste places of the mountains, but those same mountains are largely responsible for the wonderful wealth of the valleys. One of the reasons for the great asset we have in the mountains is the opportunity they afford for storing winter's floods for summer's crops. Advantage has been taken of some of these opportunities and to a limited degree the floods have been stored. No more important question faces our people than this one of how can these floods be stored more completely. A partial answer is given by the extreme northern end of the Sacramento Valley in its effort to secure fullest utilization of the waters in the great Iron Canyon. Many surveys have been made and the work definitely outlined and in the near future the Iron Canyon project will give of its wealth to reclaim thousands of acres.

HOUR GAINED

Tonight, or rather tomorrow morning, October 26, at two o'clock we will all rise from our beds and add an hour to our lives by turning the clocks back. Since the "daylight saving" law has been repealed it is to be presumed that hereafter American farmers will milk the cows according to good old sun time.

BUY TREES

Where shall we get trees for the making of our orchards? This is a question which the nurserymen of the United States are being asked these days. The war and the labor situation during 1917, 1918, and even the present year, prevented large operations along all lines which did not result in almost immediate production of food. Besides the nurserymen were compelled to ask such questions as: How long will the war last; what will be the demand for our stock once the war is over; and others to which no human could give answer.

The result is shortage of stock, though to a degree greater than anticipated. It is reported to us on good authority that but little more than 25 per cent of the needs of the country for trees can be supplied by nurserymen. Orders are already being received which will greatly reduce these stocks. Fortunately California is in much better condition than other states. In citrus trees there is a fairly good supply, but the demand is increasing every day, and long before the planting season it is presumed that available stock for next spring's delivery will be exhausted. Owing to the wine situation there will be a great reduction in grape planting, but there is doubt if there will be sufficient stock of table grapes to meet the regular demand.

The wise planter is already making investigation as to where next season's planting is to be secured.

AMERICANS OR JAPANESE?

America is now squarely confronted by the problem: "America for Americans or Japanese?" The most serious feature of the problem is that the greater part of the country has no realization whatever that there is a problem. Californians are awakening and they are often accused of being actuated by race prejudice. We do not believe that race prejudice is responsible for the one-hundredth part of the discussion which is now filling our papers and being voiced on our platforms. It is simply realization of the fact that oil and water will not mix, and the endeavor is being made to awaken the people of the remainder of the country to this fact that other sections are realizing.

Even the Transvaal in South Africa is worried as to her situation. A dispatch from Pretoria dated October 14 says: "At a mass meeting held here today to consider the question of Asiatics in the Transvaal, a resolution was adopted declaring that the meeting 'views with the greatest alarm the serious menace to the economic and social welfare of the inhabitants of the Transvaal occasioned by the continued encroachment of Asiatics and advocates immediate measures to deal with this question.'"

In the same news columns appears this communication from the Hawaiian Islands: "Within 14 years Hawaiian born Japanese will hold the political control of this territory, according to Rev. Umetaro Okumura, a prominent Japanese clergyman, speaking at a church convention here. To prepare for the inevitable, declared Rev. Mr. Okumura, it is essential that greater efforts be made to Americanize the younger Japanese who are growing into the franchise."

Views of California newspapers and California people are presented on third page of this issue, as but a slight indication of the expressions which are now filling our papers.

We have no editorial comment on the situation other than this that it is time for Californians who are Americans to do some serious thinking.

ALMONDS

Since August 13, when the first car of almonds went out, California has been shipping some of the finest nuts ever out of the state. The crop this year will total a value of $3,000,000.

H. C. OF L.

The profiteer smugly remarks: "We have been having one big war dance; now we must pay the fiddler." It may be, and we believe that all are willing to chip in to pay, notwithstanding the awful discord made by the musicians. But the trouble is the infernal selfishness of so many dealers is inducing them to take advantage of the people's helplessness and simply bludgeon them into handing over every penny.

THE TIN CAN

In the forties the skeletons of the buffalo across the plains marked the course of the trails to the Golden West. Later an equally accurate indicator was secured in the deposits of tin cans which made nearly a continuous trail from the Middle West through the Rockies. The tin plate used in making these cans was almost entirely manufactured in England. Times have changed, however, and today's tin plate is produced, nearly to three-fourths of the entire output, within the boundaries of the United States. And in the manufacture of the contents of the tins, we may add that California can allow a long handicap to any other section and still prove the winner.

SUGAR

The sugar situation seems to be even worse than during the war when we were on rations. Then it was possible to buy sufficient for any reasonable canning campaign. Today most grocers have a two-pound limit regardless of canning needs.

The Hawaiian crop for 1919 is estimated at 600,000 tons, compared with 576,000 tons last year. However, the Philippine crop is short, being 150,000 tons, compared with 216,000 tons last year. The tonnage of sugar in California, Utah and Idaho will aggregate 350,000 tons. All told the production of the United States will be considerably better than 1,000,000 tons, or something like 12,000 tons above the average of the past six years. Cuba is our great sugar producer. There has been no serious disaster in that section so that the sugar shortage of the western hemisphere is largely in the minds of the trade. Notwithstanding this the world is hungry for sugar and the prediction is that great advance in price must be made.

FIRE PREVENTION

The management of the recent "Fire Prevention Week' used as one of its slogans, "Let's stop building to burn." That slogan applies with peculiar emphasis to California. The state has had an awful experience with fires this year. These are principally in its mountain forests, and at first it may seem that the slogan of those who are looking at fire prevention from a commercial standpoint does not apply. But, unfortunately, even in our mountain forests we sometimes build to burn. There has been a campaign for many years; there have been plans of planting; there have also been plans for creating firebreaks, or great trails over mountain ridges to prevent the onsweep of the fire once it is started. This year's experience has shown the woeful inadequacy of some of these preventive measures. Thousands of fire fighters were unable to cope with the fires, once they were started and swept on with the strong wind.

May not the lessons be more thoroughly learned and may we not stop building forests to burn? Along those lines we may refer to the fact that Montana and northern Idaho are now employing 4,500 extra men as fire fighters and fire preventers. Nearly a score have lost their lives on the Pacific Coast this year as a result of forest fires. It is time we gave their prevention more serious thought.

REPLANTING

Already plans are in the making for thorough reforesting of the burned areas in the Sierra Madre north and east of Los Angeles. High school boys have been organized into parties for securing seed which will later be planted in mountain nurseries and the young trees placed on the mountain side.

Mr. Curtis makes a suggestion on Page 510 of this issue regarding the planting of incombustible vegetation His suggestions may be of value though as to whether mesquite which grows on the floor of the desert under almost completely arid conditions will do well on mountain sides, there is a question calling for a test.

On the other hand another suggestion comes from Dr. Petrie that the tested and found valuable eucalyptus should be planted on these burned over areas. He asks: "Why not plant eucalyptus or the acacia? Either would grow faster than our ordinary mountain shrubbery, and the eucalyptus would make valuable timber in a few years. Thousands of acres of our waste land that can not be cultivated could be turned to profit by planting the eucalyptus on it."

Here surely there is opportunity to question as to the wisdom of planting a tree which is so combustible as the oil producing eucalyptus. The black wood, on the other hand, might prove of great economic worth.

A LETTER FROM THE NORTHERN CALIFORNIA MILK PRODUCERS' ASSOCIATION

"We notice in the issue of the California Cultivator under date of September 27 an editorial entitled "Bunk" by R. P. Royce. We certainly wish to congratulate the Cultivator and Mr. Royce on an article like this which shows very clearly and without any partisanship the issue that the dairyman is now facing."

Poultry Raising in Citrus Orchards

By Robert W. Hodgson

FORTY years of experience in the production of citrus fruits in Southern California has demonstrated no one fact more conclusively than that citrus trees require constant and regular fertilization if they are to continue to produce profitable crops. Failure to fertilize other classes of orchard fruits may not result in disaster for years, but the omission of the addition of suitable fertilizers to bearing citrus orchards is speedily reflected in the profits returned to the owner. And there is no orchard practice the necessity of which is more generally agreed upon by citrus growers, as witnessed by the hundreds of thousands of dollars annually expended for fertilizers to be applied to citrus orchards. In nine cases out of ten the grower who is making a conspicuous success is the one who is intelligently and adequately feeding his trees.

Necessity of Organic Matter.

All the more recent investigational work points strongly to the very great importance of the annual incorporation into our citrus orchard soils of large amounts of readily decayable organic matter. No longer is it felt that the addition of fertilizers containing principally phosphorus or potassium is of great importance. A 12 year citrus fertilizer experiment at the Riverside experiment station has failed to show any marked beneficial results following the application of these elements in rather large amounts. Moreover, the presence of large quantities of decaying organic matter in the soil acts to set free considerable amounts of phosphoric acid and potash previously unavailable which, at present prices for these elements, certainly constitutes the cheapest method of providing them even were they needed. Without sufficient organic matter no soil, even though it be adequately supplied with all the mineral elements, can support plant life satisfactorily any considerable length of time. And further, the incorporation of readily decayable organic matter in the soil largely takes care of the nitrogen question, since organic matter contains notable amounts of this element and at the same time furnishes food and optimum conditions for the activity of beneficial nitrogen fixing and nitrifying bacteria. In addition, nitrogen from organic sources has apparently proven more acceptable to citrus trees than mineral nitrogen. For these, as well as other important reasons, it seems that the greatest emphasis should be placed on the maintenance of a high active organic matter content in citrus orchard soils. It is not enough merely to add organic matter, for this could be accomplished by the use of peat or other inert materials, but the organic matter added must be of such a nature as to be active or readily decayable.

Sources of Active Organic Matter.

At the present time three general sources of active organic matter are available to citrus orchardists. It may be added to the soil through the use of a green manure crop, by the application of animal manures, or by the incorporation into the soil of bean straw, alfalfa hay, or other readily decayable material of a similar nature.

But in many of the older orchards a green manure cover crop cannot be grown satisfactorily on account of the large size of the trees which shade the ground and prevent its growth. And in certain sections cover crops in young orchards are not practical on account of lack of irrigation water or because of peculiar soil conditions.

This latter is particularly true of the heavier types of soil such as the clays and adobes; all the more so where the winter rainfall is sufficient to almost saturate them, then ceases in early spring and within two weeks has dried out to the point where it is impossible to plow with any degree of satisfaction. The mere physical difficulties of handling the winter cover crop, especially in parts of the San Joaquin Valley, are sufficient to discourage its use.

The supply of animal manures at the present time falls far short of the demand. Citrus growers have been for some time bidding one against the other for this material, greatly to the satisfaction of the manure dealer. And with the advent of the truck and tractor the manure supply is ever decreasing, rendering the situation truly a desperate one, for in addition, as the competition to obtain it has increased and prices gone up, in far too many cases the quality has deteriorated.

Bean straw and alfalfa hay at present prices are worth far too much as feed for live stock to induce growers of these products to sell large quantities of them to citrus growers for fertilizer. And even were the supply adequate and certain, which is not the case, it is a question whether these materials should be allowed to be sold to the citrus grower for fertilizer before being utilized by the live stock farmer for feed. Certainly alfalfa at $220 and bean straw at $14 come high as fertilizer, especially when one considers that if fed to stock and all the manure, both solid and liquid, conserved, 70 per cent is regained in the manure and urine.

What is to be the future supply of active organic matter for the citrus grower is a question already being raised in the minds of many orchardists. With a large and increasing acreage which cannot be cover cropped, with the supply of animal manures decreasing and prices ever advancing, and with at best an uncertain supply of other sources of organic matter, prices for which fluctuate according to the foodstuff market, the organic matter situation will soon be extremely serious.

Fundamentally the solution of this perplexing problem lies in the extension of diversified farming in which the raising of live stock plays a prominent part. Among the most common suggestions offered for diversifying citrus orcharding is that of combining a dairy herd with the orchard. It is said that such a combination is almost the universal thing in the orange orchards of Brazil. While in a small way this suggestion is capable of application even at the present time, there are many almost insuperable. difficulties which will operate to prevent such a combination from ever being used on a large scale, at least until a number of radical changes in rural economics in Southern California occur. In order to maintain a dairy herd one must have alfalfa and a relatively large amount of land, at least no less than one acre to the cow when pastured and a half acre when soiling is practiced. At present valuations citrus land and water are far too valuable to use for the growing of alfalfa and the carrying on of a dairy business. For success in this branch of agriculture relatively cheap water, and at best only moderately priced land, are prerequisites. No sane person would think of raising alfalfa on thousand dollar an acre land with three cent water. It simply can't be done and the books come out on the right side of the ledger. The fertilizer obtained would cost far more than at the present prices for fruit citrus growers can afford to pay. To be sure, citrus growers may eventually have to come to the place where one-fourth the present acreage fertilized with manure from the rest of the land will be far better than no profits at all on an acreage not possible of fertilization. But such a transition will not come voluntarily unless our citrus growers are gifted with perspicacity to a most astonishing and unexpected degree. Just so long as it will be found possible to make returns on the investment, orchardists will continue to put off the time of reckoning. And then it may be too late.

No doubt there are available considerable areas of low lying land at present not planted to citrus which could be put into alfalfa or some other rank growing legume to be harvested and fed to animals or applied directly to citrus orchards as fertilizer, but even with these lands the high cost of water will work to prevent such tracts from being utilized for this purpose. So long as it is more profitable to plant these lands to other fruits and crops they will not be put into alfalfa. The scarcity of water in Southern California is an important contributing factor to prevent this part of the state from ever becoming an alfalfa or dairying country, the success of which industry requires an abundance of water and relatively cheap land. The citrus industry in Southern California is simply a victim of its intense specialization, and any radical change toward diversification is bound to disturb the whole economic fabric of Southern California agriculture.

Poultry a Possible Solution.

The principal advantages of this means of providing for the diversification of citrus orcharding so as to furnish manure for the upkeep of the orchard soils lie first, in the slight effect such a movement would have in disturbing present economic conditions; second, in the relatively small amount of land required to keep sufficient poultry to adequately provide for the fertilizer requirements of the trees; third, in the small amount of labor and capital required to make the desired change, and last, in the unexcelled character of the fertilizer obtained.

Careful experiments have shown that when confined, and all the fertilizer recovered, one may expect to receive 70 pounds of droppings and 30 pounds of litter per fowl per year, or some hundred pounds of fertilizer. Analyses have repeatedly shown that under California conditions where the fowls are fed a balanced ration poultry droppings will run from one to three per cent nitrogen. On a basis of two per cent nitrogen the manure from one hen during a year would contain that amount recovered from approximately 12 pounds of nitrate of soda, or 10 pounds of sulphate of ammonia, which any orchardist will at once recognize as a larger application than has usually been given per tree in the past. It is extremely doubtful whether it would be advisable to have much more nitrogen available to a citrus tree during a season. In addition the use of poultry manure would provide for a large amount of readily decayable organic matter to be returned to the soil.

It has been the experience of citrus growers in the past that poultry manure has given very satisfactory results. Indeed, there are many growers who would use nothing else if they could get all they needed. The present high prices for poultry droppings are but another indication of the desirability of this substance as a fertilizer for citrus trees. Poultry droppings are more concentrated and therefore run higher in nitrogen than other manures for the reason that both liquid and solid excreta are voided together, the solid portion tending to absorb and conserve the liquid portion, thus preventing loss. In addition, on account of the finely ground character of poultry manure it works easily into the soil and becomes available to the trees much more rapidly than other manures.

Figuring on this basis it can readily be seen that a hen per tree should serve to keep up the fertility of our orchards, were all the droppings recovered and applied to the orchards. A ten acre unit would then consist of 1000 hens, which should require at most no more than a half acre for pens. Under proper management a profit of a dollar per hen should be received and in addition the orchardist would receive the manure free of cost. Many orchardists would undoubtedly keep the hens for the manure alone if no profit whatever were realized on the business, so valuable do they consider poultry manure as a fertilizer for citrus trees. On tracts larger than ten acres a one man unit would be the logical thing. One man can care for 2500 hens, the manure from which would take care of the fertilization of 25 acres. On a ten acre tract one man could therefore care for the thousand fowls required for fertilization and in addition do the greater part of the orchard work, since ordinarily it has been found that one man can do all the work on a 20 acre block of citrus.

Management.

In the citrus grove the hens would undoubtedly best be confined in pens first, in order that all the fertilizer might easily be recovered, and second, to prevent the filling in of irrigation furrows by scratching, as well

Agricultural News Notes of the Pacific Coast

Northern California

Sixty bales of hops at Ukiah sold for 71 cents a pound.

Ducks are destroying much rice in Colusa and Glenn Counties.

Mendocino is the only county in the state that pays coroners' juries.

Sonoma County grape growers complain of much damage by rain.

Bartlett pears from Placerville brought $7.30 a box in New York.

The yield of seedless raisins in Yolo County will be more than 1,500 tons.

One firm will plant 4,000 acres of barley east of Dixon, Solano County.

Butter fell two cents in price and eggs two cents in San Francisco last week.

Frank Swett of Martinez estimates the value of the state's pear crop at $7,000,000.

The Western Fruit Jobbers Association will meet in San Francisco February 2-6, 1920.

A course in bee keeping will be given at the university farm, Davis, November 10-22.

Near Cloverdale, in Sonoma County, the deer are eating up the hay crop of homesteaders.

A dispatch from Petaluma states that the price of eggs dropped five cents last week.

On the Robson ranch, near Grass Valley, 15 pounds of potatoes were dug from one hill.

Sisson, Siskiyou County, reports strawberry vines yielding a fine heavy crop in November.

Orchard run apples in Tuolumne County were sold to Los Angeles buyers for $75 to $85 a ton.

A three year old almond orchard of five acres at Yuba City, Sutter County, paid $100 an acre.

At Main Prairie, Solano County, a Hindu rancher has 3,000 acres in rice which yielded 9,000 sacks.

A steamboat with a cargo of 1,000 cases of asparagus sank in the Sacramento River near Rio Vista.

On account of strikes, coupled with car shortage, the northern crops of potatoes and onions are not moving.

Sebastopol grape growers have leased the local winery and are crushing their grapes on a cooperative plan.

Pig clubs for the boys and girls are more common in the northern than in the central or southern parts of the state.

The Pioneer Rice Company, Willows, sold the first rice of the season. It came from 1,150 acres and sold for $200,000.

P. Clendenin of Lake County sold 84 tons of Bartlett pears from 235 trees, selling them for $6,720, or more than $32 per tree.

Horticultural Commissioner Turner of Placer County says that Japanese are the most frequent violators of the fruit standardization law.

Prominent land owners met at Marysville last week to organize a rice growing district of more than 10,000 acres in Sutter County.

Three thousand crates of Tokay grapes rotted on the packing shed platforms at Acampo, San Joaquin County, on account of car shortage.

Central California

Modesto is to have a 15 acre park.

Porterville reports an unusually fine crop of pomegranates.

Tulare raisin men say the paper raisin trays are a success.

J. H. Bowron of London, England, is in the San Joaquin Valley.

The Manzanillo olives on a ten acre tract at Lindsay sold for $190 a ton.

The total pack of peaches in Tulare County this season is 1,139,251 cans.

The Stanislaus County Swine Breeders Associatioon was launched on October 10.

Three carloads of dairy cattle were last week shipped from Hanford down to Brawley.

Moss Landing in Monterey County is harvesting a big crop of whales this season.

Mrs. Figuhi of Lodi made eight dollars one day at the local cannery peeling tomatoes.

Dried apricots in the San Jose district will net the growers about 25 cents a pound.

Tulare reports that the market price of hogs has dropped one dollar during the past week.

At auction sale at Tegner, Merced County, three carloads of hogs brought $15.20 per cwt.

An Orange Cove, Tulare County grower sold his Emperor grapes on seven acres for $5,000.

A short course in bee keeping will be given by the state university at Fresno November 24-29.

E. C. Clark, Delano, Kern County, had 27 tons of prunes on 15 acres, which brought $70 per ton.

Hot dogs! The Valley Sausage Company's plant at Visalia was destroyed by fire October 11.

Lodi grape growers figured they needed 5,681 cars to handle the crop left unshipped on October 5.

A 20 acre Thompson Seedless vineyard at Kerman, Fresno County, sold for $22,000 without the crop.

Fresno County fruit growers have purchased 1,120 acres in Kern County and will move onto the land at once.

Tulare County hunters complain of a shortage of ducks, while rice growers farther north have an excess.

The crop of the Baid Eagle fig orchard north of Modesto brought 17 cents a pound and a total of $80,000.

The recently organized Fruit Growers National Bank of Watsonville has received its charter from Washington.

The American Seedless Raisin Company's vineyard near Livingston, Merced County, has yielded 250 tons of Thompson Seedless grapes the third year after planting.

Fowler, in the San Joaquin Valley, has a fruit pickers' camp of 40 screened tent houses with wooden floors, steel bunks, electric lights, piped water, sewerage and a big kitchen and dining room for all.

Farm Bureau Meetings: October 20. Center meeting, Delta View; October 21, Center meeting, Paddock; October 23, Center meeting, Corcoran; October 25, Center meeting, Oakvale; October 27, Directors' meeting, Hanford; October 29, Center meeting, Stratford.

Southern California

The Ventura bean crop is 30 per cent normal.

Yucaipa apple growers are advertising for pickers.

The Ventura County farm bureau has 350 members.

The San Diego farm bureau fair cleared about $8,000.

The Pomona Valley walnut crop will be from 600 to 700 tons.

The town of Ojai, Ventura County, is having a building boom.

The Burbank cannery has been purchased by Libby McNeil & Libby.

The season's returns of the Irwindale Citrus Association averaged $4.17 a box.

On October 9 there were 340,660 boxes of apples in cold storage in Los Angeles.

California bean growers are urging a tariff of four cents a pound on Oriental beans.

Growers on the Mexican side of the line pay their cotton pickers $1.40 per hundred.

Twenty-nine carloads of sheep were shipped from Brawley to Kansas City on October 13.

Nearly 2,000 acres of grape vines will be set out in Imperial Valley in early spring.

Yorba Linda ranchers are circulating a petition for a new packing house at Dawn.

At Hemet Hertel Brothers picked 35 tons of peaches from five acres of four year old trees.

The Highland district shipped 1481 cars of citrus fruits, 1,001 cars short of the average year.

Spot cotton sold in Blythe, Riverside County, last week for 36 cents, a record price for short staple.

Residents in and about Pomona and Ontario have petitioned to have the toll gate removed from San Antonio Canyon.

The Lima Bean Growers Association state the crop will be 100,000 sacks short of the estimate made a month ago.

The annual election of officers of the Los Angeles County farm bureau will take place November 5 at the Baldwin ranch.

Twenty tons of raisins as the first run of the new Bowron dehydrator at Pomona has proved the plant a complete success.

The Santa Ana sugar factory will have finished beet slicing by November 1. The average return to the growers is $12.30 a ton.

El Monte has such a heavy walnut crop that the schools have been closed for the past month that the children may help in harvesting.

The university short courses in bee keeping for Southern California will be held at Riverside, December 1-6, and at San Diego December 8-13.

More than 150,000 acres of land in the Imperial Valley, near the Colorado River, will be open for entry early in November. No irrigation is possible.

The California Walnut Growers Association states that within two days after prices were set, more orders for nuts were received than can be filled, to the extent of 93 cars.

The Coast and General

A cotton carnival was held at Mesa Arizona, October 23 to 25.

Beetles are destroying the cocoanut palms in American Samoa.

Arizona will have a heavier orange crop than that of last year.

The early rains in Arizona have started plowing and seeding.

A pure seed show is to be held at Pocatello, Idaho, in January.

Arizona reports show stock grazing good in all parts of the state.

Potato harvesting has just begun in the Flagstaff, Arizona section.

An irrigation project at Shelby Montana, includes 285,000 acres.

Italian prunes brought $100 a ton on the trees at Yakima, Washington.

Quartzite, an Arizona mining town, was literally washed away by a cloud burst.

Cotton growers at Parker, Arizona, are offering pickers four cents a pound.

The bureau of crop estimates shows crops of Arizona to be 113 per cent of normal.

A carload of dried loganberries from Salem, Oregon, shipped to Canada brought $29,000.

A pear orchard in Garden Valley, Oregon, nine years old, yielded the owner $350 an acre.

One cannery at Puyallup, Washington, has orders for 95 cars of evergreen blackberries.

Of the 60,000 persons visiting Yosemite Park this summer, 40,000 made the trip in automobiles.

The Yuma Valley Cotton Growers Association was recently organized at a public meeting in Somerton, Arizona.

Canada received 7,000 more American emigrants in 1919 than in the previous year. More than one-half were farmers.

C. E. Udell, at Tieton, Washington, sold his Delicious apples on the trees for $100 a ton, a record price of about $3 a box.

The 20 acre Johnson ranch at Tieton, Washington, was bought in 1910 for $110 an acre and has now been sold for $1,250.

A mysterious epidemic of poisoning with 25 per cent of mortality in animals affected, is reported among the horses of Chelan County, Washington.

An inspector from the federal horticultural board is in the cotton fields of the Salt River Valley to determine if boll weevil or pink boll worm has secured a foothold.

Water users under the Tempe canal in the Salt River Valley of Arizona are petitioning the Salt River Valley Water Users to be allowed to come under the latter project.

Receipts from the national forests of Arizona for the year ending June 30 were $511,000. $171,928 of this money will be returned to the state for schools and the improvement of roads.

An exchange similar to the California Honey Producers Exchange is now planned by the bee keepers of the Salt River Valley. It is probable that a warehouse will be established at Tempe and another at Phoenix

SOIL DRAINAGE FOR ORANGES

By Ernest Braunton.

IN THE orange districts of California little complaint is heard that underdrainage is needed in any soils. We have hardpans to break up, not to get rid of surplus water, but to allow the roots to delve deeper.

Down in Florida where the rainfall is three times as great as ours, drainage of heavy soils is a more serious matter, and, again, with very light soils there is need of a bottom to the dishpan and a hard stratum or water table is desired at about three feet, never less. Even this would not satisfy California growers, who desire at least a foot more of permeable soil. But Florida growers have one trouble common in the lowlands that has not come to the writer's attention in California until the present year. In Florida much orange land has to be drained to lower the surface water before any trees are planted.

Recently the writer spent a day in the Garden Grove section of Orange County, meeting several owners of young orange orchards. Some of them are agitating the organization of a vast drainage district so that the surface water beneath their orchards may be lowered before the roots of the orange trees, now young shall have reached the present dangerous level. In all of this land there is also present a little more alkali than is considered necessary to the best development of the orange tree, and an adequate drainage system would quickly lower the percentage of alkali now present. It is generally considered that lands low and flat enough to need such treatment are too cold for oranges, but the Garden Grove section is a marked exception to this combination and is, perhaps, the only orange section needing drainage.

These gigantic drainage systems would render valuable much land lying between the sea and a line drawn from Los Angeles to Santa Ana, some of which, without drainage, is of no value to agriculture. A few years ago Compton enjoyed a reputation as an apple center. The writer visited several small orchards that had produced good crops for a number of years, but as soon as the roots reached the surface water the trees began to deteriorate, were finally removed and the land planted to sugar beets. The land suitable for oranges, such as that about Garden Grove, does not suffer from an excess of surface water so long as no irrigation is carried on. But the soil is light and of good depth and irrigation must be frequent, and for that reason the permanent water level should be lowered. Rains must also be carried off or water stagnates about the roots for long periods in winter.

LAND FOR EX-SERVICE MEN

That 50 of the 63 tracts of land, varying in area from 4,000 to 12,000 acres, offered to the state land settlement board in response to its invitation for offers some two months ago are suited to settlement and would be settled by the 1,000 ex-service men who have already applied for farms, is the opinion of Dr. Elwood Mead, chairman of the board.

It is impossible now, however, according to Professor Mead, to buy more than one or two tracts since the land settlement board's funds are restricted at the present time to the million dollars appropriated by the last legislature.

The lands offered are not cultivated or are cultivated by tenants. "The benefits that would come to this state and the addition to its social and political strength from peopling these tracts with families wedded to the soil and making a good living as the settlers at Durham are doing, can scarcely be overstated. It would lessen the dangers of non-resident ownership, of tenantry and alien control of land which now confronts the state," said Professor Mead.

It is a matter of regret that a year has to elapse before the bond issue of $10,000,000 can be voted on. Already there are on file in the two offices of the state land settlement board, at Durham and Berkeley, applications for farms from about 2,000 people, about half of these being from ex-service men.

CALIFORNIA CROP REPORT

The United States bureau of crop estimates gives the following percentage figures for 1919 as compared with normal: Almonds, 75; apples, 89; apricots, 95; figs, 102; grapes, 100; olives, 68; peaches, 100; pears, 93; plums, 90; prunes, 103; walnuts, 106.

The counties of best crop yields per acre are: Almonds, Stanislaus, 115 per cent; apples, Butte, Napa, San Bernardino, San Diego, Santa Clara, 100 per cent; apricots, Riverside, 120 per cent; figs, Fresno, 103, Tulare, 102; grapes, Kern, 101 (14 counties have 100); olives, Yuba, 110; peaches, Sutter, 110; pears, Yuba, 110; plums, San Benito, 105; prunes, Santa Clara, 110; walnuts, Orange, 108, Los Angeles, 107, Santa Barbara and Ventura, 105.

BELGIUM'S PLANT INDUSTRY

Belgian delegates to the International Trade Conference made the following statement to a representative of the United States Chamber of Commerce:

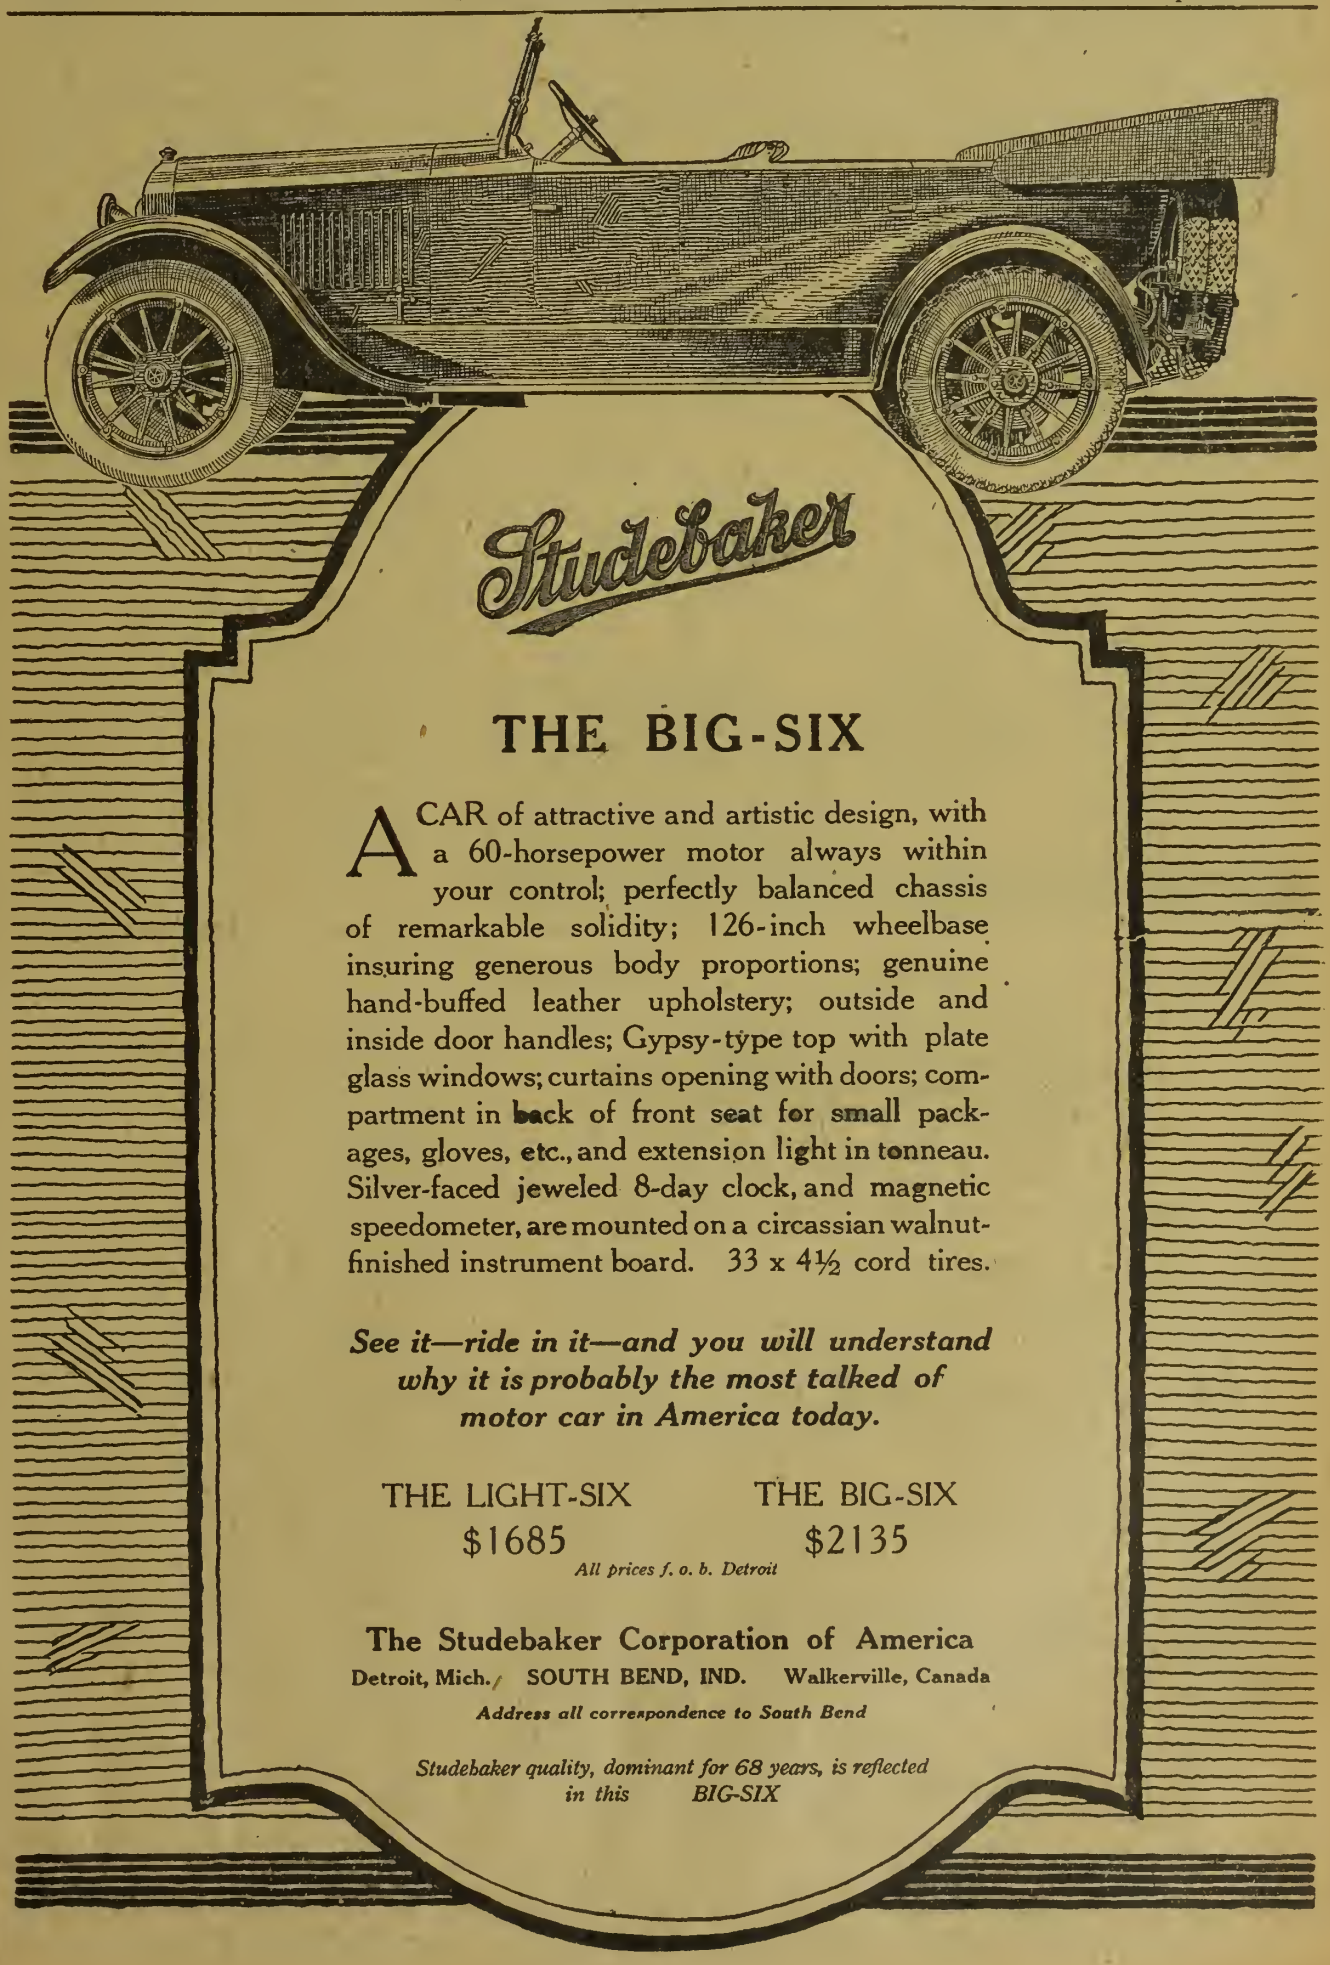
"Unfortunately, in horticulture the nurseries are in a most critical position. Export to France is impossible at present, owing to lack of transport. England has established new restrictions and duties which render import almost impossible, too. Russia, which has a great market, is, of course, not in a position to buy. Germany is unable to buy owing to the depreciation of the mark. The great hope for our horticulturists was the American market, but unfortunately the United States has closed its ports to the imports of plants, which means a real disaster for the whole region of Ghent."

AGRICULTURAL EXPORTS

Agricultural exports from the United States for the eight months ending September 1 are as follows: Barley, 28,713,814 bushels; corn, 40,043,492 bushels; oats, 39,869,821 bushels; rye, 26,787,000 bushels; wheat, 92,673,999 bushels; beef, fresh, 114,297,125 pounds. Meat and dairy products combined amounted to $905,041,985. Cotton returned $2,137,768,967, and was by far our largest export, mineral oils coming second with $1,519,225,707. But one-sixth as much rye was shipped as during 1918 and but one-fourth as much wheat. Only one-third as much fresh beef as in 1918 was exported.

TRADE WITH GERMANY

In the year ending June 30, 1914, our total imports from Germany were valued at $189,919,136; in 1918 this total dropped to $64,094. Our exports to Germany in 1914 amounted to $344,794,276 and in 1918, nothing. In April of the present year our exports to Germany amounted to but $55; in May, $60,814; in June, $8,758,013. Even in July of 1919 we imported from that country goods valued at but $291,166. In June we sold Germany $2,616,892 worth of bacon and $1,099,824 in July, the biggest item for the two months, but in June we sent them lard to the value of $3,414,362. Two-thirds of the products sent through the port of New York consisted of meat products.



Studebaker
THE BIG-SIX
A CAR of attractive and artistic design, with a 60-horsepower motor always within your control; perfectly balanced chassis of remarkable solidity; 126-inch wheelbase insuring generous body proportions; genuine hand-buffed leather upholstery; outside and inside door handles; Gypsy-type top with plate glass windows; curtains opening with doors; compartment in back of front seat for small packages, gloves, etc., and extension light in tonneau. Silver-faced jeweled 8-day clock, and magnetic speedometer, are mounted on a circassian walnut-finished instrument board. 33 x 4½ cord tires.
See it—ride in it—and you will understand why it is probably the most talked of motor car in America today.

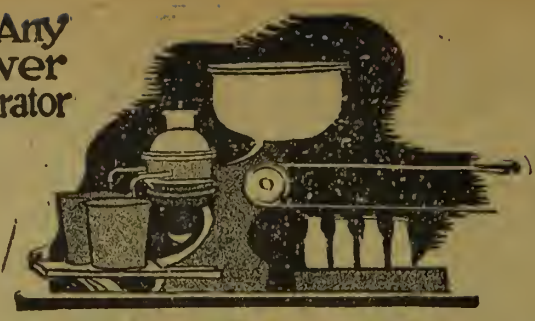
For Any Power Separator



BOSCH

HIGH TENSION MAGNETO

Fairbanks-Morse "Z" Engines use Bosch High Tension Magneto Ignition. Largest Magneto order goes to Bosch.

Increase your separator's production capacity by adding the everlasting dependability of a properly designed Bosch Magneto Equipt Gas Engine.

The famous Fairbanks-Morse "Z" engines are now equipt with the Bosch High Tension Magneto. Fairbanks-Morse Engineers decided on Bosch—America's Supreme Ignition System—only after the most searching and rigorous comparative tests.

They found that Model "Z" in all sizes from 1 1-2 to 20 horse-power developed greater power, was more dependable and lasted longer without overhauling and repairs, when Rip Roaring Bosch Sparks did the ignition work.

You can well apply the results of that investigation to all farm machinery. Your Tractor, Truck, Automobile or Gas Engine will be more efficient plus Bosch High Tension Magneto Ignition.

California's Biggest Walnut Crop

By H. H. Warner

WITH every walnut packing house in the state working to full capacity the present indications are that the 1919 crop may even exceed the association's estimate of 23,000 tons, which is the largest crop of walnuts ever produced in California. The fact that during the first two weeks of October following the early rains fully half of the walnuts fell from the trees adds interest to the situation this year and taxes the output of the packing plants to the utmost.

Some of the larger local associations have been working three shifts of sorters and running the graders continuously for 24 hours a day in order to keep up with the heavy deliveries from the orchards. In some cases even this course has not met the needs and some houses that were stacked full to the roof with walnuts from the growers had to close down on any further receipts for two or three days until they could catch up with the work. The California Walnut Growers Association estimates that fully 85 per cent of the crop will have been delivered by November 15, when the first pool closes.

This situation has demonstrated conclusively the need for equipping the packing houses with the most modern and up-to-date machinery for handling the crop quickly and efficiently. The new packing house at Whittier is an example of the latest type of packing houses and with its 60 tons per day capacity has been able to keep up with the heavy deliveries this season. Instead of each grower culling his own walnuts this house does all of the culling for its members at a cost of less than $1 per ton, whereas the average cost of the same work when done on the ranch ranges from $3 to $5 per ton. There seems to be no good reason why a walnut grower should take out the culls from his crop any more than an orange grower should cull his oranges before delivering them. The work can be done more uniformly and at much less expense in the packing house, and a number of the more modern walnut houses are now following this plan at a considerable saving to their members.

The quality of the crop this season is running fully up to the preliminary estimates although the early deliveries of nuts which fell first were as usual of light average weight. The vacuum machines now installed in practically all of the houses lift these light weight nuts out, however, and the meats extracted at the cracking plants usually net the grower considerably over half the price received for his first grade walnuts. In some of the hot interior valleys and in orchards which did not have sufficient irrigation water last summer, perhaps 25 per cent of the walnuts are running No. 2s in size, but these smaller nuts are well filled as a rule. The association price on No. 2s this year was 5½ cents below the price named on No. 1s and at this differential the orders for No. 2s were readily confirmed.

Within 36 hours after opening prices were named this year the association was sold out on its estimated tonnage and was forced to decline orders for approximately 90 carloads in addition. Shipments are now going forward from the 28 association houses at the rate of about 35 cars a day, and all of these are heavily loaded owing to the present car shortage. With the assistance of the national advertising campaign on Diamond Brand walnuts again this year to stimulate consumption of this big crop, there is little doubt but that the 1919 crop will be quickly disposed of and that the walnut growers will again find themselves in the fortunate position of being able to place their 1920 crop on a bare market.

The association is trying an experiment this year in packing a part of the meats extracted from the culls, in eight ounce tin cans. The meats are packed in vacuum so that they will keep sweet and fresh indefinitely and are instantly avavilable for use on cakes, salads, etc., all the year around. A large part of the output of these vacuum packed cans will be marketed in New York City and the merchandising of this consumer package will support the association's contention in its advertisements that walnuts are good to eat every month in the year as well as at Thanksgiving and Christmas.

Japanese Persimmons

By Ernest Braunton

When one notes the constantly increasing demand for persimmons the past few years he marvels that their good qualities were not long ago recognized. For when the writer first visited Los Angeles in 1887 there were trees of the native Virginian species, loaded with fruit, 40 feet high, at the old Wolfskill home on what is now Central Avenue in the heart of the city. There were also Japanese persimmons, especially of the Hachiya variety that are still bearing heavily, though now 45 years old.

What makes it still more marvelous is the fact that the Hachiya is one of the best, and the largest persimmon the writer has seen. Martin Wetzel of Los Angeles has a tree he planted 44 years ago, evidently two years old at time of planting. For vigor it cannot be beaten for each year it bears a crop of the largest fruits reported in the south end of the state. The writer has eaten of these (and of all the better known varieties) and finds none better when well ripened. This section of persimmons are of the puckering kind when unripe.

Tho astringency of persimmons, which is due to the presence of tannic acid, may bo removed by dipping in lye, smoking, or soaking in water placed in tubs from which saki or Japanese rico beer has been taken. Ten days in this solution will remove the puckering quality and improve the flavor. Of late years tho persimmon is becoming popular in a dried state. They are so rich in sugar that when peeled and hung up to dry in the sun they cure with a layor of sugar crystals over the surface. Many persons prefer them in this state to dates.

If one wishes a puckerless fruit he should get the Hyakume which is devoid of tannic acid even when hard and green. It is also a large fruit of fine appearance and flavor. Other good varieties are the Twentieth Century, an October fruit like the Hachiya, and this is also the ripening time for the Hyakume and the Yama-Yemon. The Yemon is a late variety, ripening in November and the Yama-Yemon is claimed to be an improvement on it in several ways, for it is not astringent even when hard, and ripens earlier. The Tane Nashi and Mammoth Gosho are early varieties, ripening in September. There is an increasing demand in all markets for Japanese persimmons.

TREE POWDERS

Attention of the horticultural department of the University of Missouri has been called to the fact that some of the so-called "tree powders" are again being advertised and sold. The advertisements or agents for these materials generally claim that if holes aro bored into the trees and then certain quantities of the powder are put into them the trees thereafter will be free from insect and fungus injury. The theory is suggested that tho poison will bo taken up by the sap, distributed throughout tho treo and act as a specific against all kinds of insects and diseases. Sometimes it is also claimed that tho material will

also act as a fertilizer and tonic and thus lead to greater productiveness. It is generally the amateur that is made the victim of these cure-alls, for the experienced commercial grower has learned to leave them alone. However, each year there are enough amateurs misled by the claims to make manufacture and distribution of these powders profitable.

It might be stated that the grower should place no reliance in these fake remedies. Good sanitary methods of orchard management coupled with thorough spraying treatment constitute the means of controlling the insects and diseases of the orchard; and they alone should be relied upon.

WALNUT GROWERS MANUFACTURE SPRAY

By H. H. Warner

The past year has demonstrated conclusively that the dusting of walnut trees for the control of aphis, codling worm and red spider is successful. The California Walnut Growers Association erected a small plant at Goleta for the manufacture of this dusting material under the direction of Prof. Ralph E. Smith and was able to supply the needs of its members at cost but was not in a position to sell the dust to other growers who needed it.

A new corporation has recently been organized for the commercial production of various kinds of dusting material, which will be able to supply not only all walnut growers but others as well. A plant has been purchased in Los Angeles and Prof. Smith, who has been given another year's leave of absence from the university, has been placed in charge.

Prof. Smith, who has been responsible for the new industry and for the practical application of the dusting material in the control of walnut pests, is planning a rapid expansion of the business this next year. Prof. Smith hopes to be able to introduce into the aphis dusting compound an ageut which may have some effect in checking the dreaded walnut blight.

CITRUS BLAST

The Butte County Farm News referred to the serious situation in the citrus orchards of that county because of the dreaded disease, citrus blast. In the last Farm News, organ of the bureau, the following appears:

"In response to a concerted appeal from the citrus growers to the farm bureau, Dr. H. S. Fawcett, expert citrus pathologist, and Dr. H. J. Webber came to Butte County and spent several days looking over the citrus blast situation. Both of these men have not realized before how really serious the citrus blast had become in this county and were surprised at its widespread appearance. Specimens were collected from orchards all over Butte County.

"In company with the farm adviser, Dr. Fawcett also made a trip to Tehama County and Glenn County and found citrus blast lesions in the orange trees there.

"The citrus growers are demanding that a pathologist be sent into this district to work out control measures for handling the disease. It seems that at the present time no funds are available for such work, and until such funds can be had the growers will attempt to carry out in an experimental way methods outlined by Dr. Fawcett. The results of these treatments will be carefully watched by the citrus blast committee, of which R. P. McCune is chairman."

FUMIGATE, THEN KEEP CLEAN

It should be remembered that treatment of legumes subject to infestation by weevils that can breed generation after generation in storage will not keep them free from weevils if they are stored so that adult weevils can get to them and lay eggs on them. The application of remedial measures may kill all weevils in the seed at the time of treatment, but no treatment has a lasting effect in preventing reinfestation from outside sources. Seeds once treated should be stored in rooms free from adult weevils, or placed in tight barrels or sacks made of closely woven material, and should be examined occasionally as a guard against subsequent infestation.

FIFTY SECOND FRUIT GROWERS' CONVENTION

Director Geo. H. Hecke of the state department of agriculture has issued tentative program of the fifty second state fruit growers and farmers' concention to be held at Chico, November 10 to 15. It is a statisfaction to know that the change in the commissions and the making of a department of agriculture to take their place will in no wise change, unless it be to enlarge, the state conventions, which have been milestones in the progress of fruit culture and farming in this state for more than two score years. The one held a few months ago at Riverside was by far the greatest in attendance and greatest in general interest of any yet held in the state. We trust the one to be held in Butte County will have equal interest.

The first session will be on Monday morning, November 10. This will be conducted by the state organization of county horticultural commissioners. The commissioners will remain in session on Tuesday morning and Tuesday afternoon all who are attending will visit the United States plant introduction gardens near Chico. Wednesday morning, November 12, at 9:30, State Director Hecke will formally call the state convention to order, when welcome to the city will be extended and addresses made on "California Agriculture: the Things That Threaten It; the Need for Protection." During the same day there will be a discussion of "Accomplishments and Possibilities of Cooperation." This question will be discussed by representatives of the California Almond Growers' Exchange, California Prune & Apricot Growers, Inc., California Peach Growers and California Associated Raisin Company. Other addresses will be made on "Standard Pack and Packages", "Status of the Rice Growers' Association", "Function of the Junior College in its Relation to Agriculture", and there will also be a demonstration of fruit packing.

Thursday the convention will be moved bodily to Oroville, will make trips to orange and olive orchards, canneries and packing plants, and in the afternoon will hold sessions in the exposition building, where "Packing Oranges and Maturity Standards" will be discussed. Other subjects to be discussed are "Packing Ripe Olives" and "Pruning of Olives." After an evening program yet to be arranged the convention will return to Chico.

Friday's discussion at Chico will be devoted to irrigation, pruning, spraying, frost control, red spider, evaporators and fruit drying, standardization, community canneries and finally reports of committees. At 6:30 that evening a banquet will be held.

Saturday morning, November 15, the convention will spend in a trip through and an inspection of the Durham state land settlement, seven miles south of Chico, the first of its kind in the United States. In the afternoon there will be a popular meeting on the settlement with discussions of live topics. This portion of the program is yet to be arranged.

ANNUAL OF LOS ANGELES FARM BUREAU

Farm Adviser Hodgson of Los Angeles County reports that at the last board of directors' meeting the annual meeting date was definitely fixed for Wednesday, November 5, the place to be the Anita Baldwin Rancho at Arcadia. Plans are rapidly being made for a splendid program of events, including good speaking, a basket lunch and stock judging demonstrations. Election of officers for the coming year will be held. The home department members will also complete their organization at this time by the election of a chairman and director at large.

CHAYOTE FOR HONEY

A beekeeper at Torrance, Los Angeles County, has found that chayote blossoms furnish a white, pleasant tasting honey. He advocates planting them on fences and trellises for their honey bearing as well as vegetable bearing properties.

Sweet potato growers of Arkansas are perefecting a cooperative shipping organization modeled on the plan of the California and Florida citrus exchanges.

"Set 'em Snug"

"It's the little things that count, son, when you're blasting for tree planting—tamping, for instance. It takes about three minutes and it's just as quick and easy to do it *right* as to do it *wrong*. The Hercules Powder Co.'s book, 'Progressive Cultivation' tells you all about it. If you follow the directions in this book you'll always get the best results with

HERCULES DYNAMITE

"I tell you—there's nothing like it. Hercules Dynamite gave me my start in the fruit growing business—and I owe a big part of a good sized balance in the bank to the knowledge I got from 'Progressive Cultivation'. This book tells you all about the uses of explosives on the farm and in the orchard. And it tells you *how to use dynamite* to get the best results—gives you full directions illustrated by photographs and diagrams.

"Every orchardist in this township should have this book—and he can have it, *free*, if he'll sign the coupon and send it to the Hercules Powder Co."

After 20 years

A PUMP developed out of a 20-year experience in building pumps is one from which to expect the highest efficiency.

Such is our BEAN UNIVERSAL PUMP—BELTED.

It's the pump we have selected out of a full line because it embodies all of the strong features found in all of the others.

Practically all centrifugal pump troubles, when they do occur, are stuffing box troubles. To prevent them we provide a generous water sealing bowl. Filled with water, the shaft is completely surrounded where it enters the case. As a result, danger of loss of priming is minimized, nor is it necessary to cinch the packing down so tight that the shaft is injured. It is not difficult to see the advantage of this feature.

This Bean Universal Pump

is provided with an automatic water balance and an extra heavy, oversize outboard bearing. This bearing provides almost unnecessary insurance against excessive vibration and makes belt changes easy and simple. An extra web of metal between the sealing bowl and the outboard bearing standard provides against strain and vibration. It's a liberally braced, sturdy pump. Both suction and discharge adjustable at any angle.

Let us tell you the kind of equipment to install to insure the largest head of water at the least cost.

CALIFORNIA FOR AMERICANS

Continued from Page 539

be illegal for any member of said alien race, following said proclamation, to remain a tenant of any property in said political subdivision for more than one year unless said proclamation meanwhile is annulled as above provided; and it shall also be illegal for any alien of the race designated to begin any new business or occupation in said political subdivision following said proclamation until it is annulled as provided for."

It appeals to us that this would simply mean dissemination and probable increase of the race on American soil.

Phelan Shoots Straight

When Senator Phelan first took a definite stand looking toward a correction of this situation he was asked by the representatives of two Japanese newspapers regarding the prejudice in this country against the Japanese. He gave assurance that it was not in any sense a question of race prejudice or any suggestion of race inferiority. Senator Phelan said:

"I am glad to have the opportunity to explain to the people of Japan the California attitude toward them, which necessarily must be the national attitude. There should be no misunderstanding, because misunderstandings breed trouble.

"Great numbers of Japanese men and women are in California and are acquiring large tracts of agricultural land. The state law forbids ownership, but they take it in the name of their children born on the soil, in the name of corporations, and so circumvent the intent of the law.

"They also lease land and work for a share of the crops, and when thus working for themselves are impossible competitors and drive the white settlers, whose standard of living is different, from the farms.

"The white farmers are not free from cupidity when tempted by Japanese to sell out at high prices, and they do sell out and disappear. The state, therefore, is obliged, as a simple matter of self preservatioon, to prevent the Japanese from absorbing the soil, because the future of the white race, American institutions and Western civilization are put in peril.

"The Japanese do not assimilate with our people and make a homogenous population. and hence they cannot be naturalized and admitted to citizenship. Therefore the question is partly economic and partly racial.

"Japan herself excluded Chinese in order to preserve her own people, and that is what California, Australia and Canada are doing. Japanese statesmen must surely, for these reasons, acquit Americans of race prejudice. We are willing to receive diplomats and scholars and travelers from Japan on terms of equality, but we do not want her laborers.

"We admire their industry and cleverness, but for that very reason, being a masterful people, they are more dangerous. They are not content to work for wages, as the Chinese, who are excluded. but are always seeking control of the farm and the crop. Immigration and naturalization are domestic questions, and no people can come to the United States except upon our own terms.

"We must preserve our soil for the Caucasian race. The Japanese, by crowding out our population, produce disorder and Boishevism among our own people who properly look to our government to protect them against the destructive competition. California by acting in time before the evil becomes even greater, expects to prevent conflict and to maintain good relations with the Japanese government.

"The American government rests upon the free choice of the people, and a large majority of the people are engaged in farming pursuits. They form the backbone of every country, the repository of morals, patriotism and thrift, and in time of their country's danger spring to its defense. They represent its prosperity in peace and its security in war. The soil cannot be taken from them. Their standards of living cannot suffer deterioration. Their presence is essential to the life of the state.

"I, therefore, urge the Japanese government and people to put themselves in our place and to acquit us of any other purpose, in the exclusion of Oriental immigrations, than the preservation of our national life and the happiness and prosperity of men and women who founded the Republic, who have developed its resources, and who occupy the land. It is theirs in trust for their posterity.

"The people of Asia have a destiny of their own. We shall aid them by instruction and example, but we can not suffer them to overwhelm the civilization which has been established by pioneers and patriots and which we are dutifully bound to preserve."

Buying Just the Same

Meantime the Japanese are extremely active in securing possession of lands and in introducing picture brides, which means a continual increase in the birth rate. The Lodi Sentinel recently noted:

"What is perhaps the greatest Japanese land deal in California is now being completed in the south. A syndicate of 27 Japanese strawberry growers who cleared big profits from their crops in the Watsonville and other nearby districts, have formed what is known as the Toyo Industrial Association and purchased about 3000 acres of land near Modesto. It is reported that the syndicate has been negotiating with a San Francisco bank for the loan of $400,000 with which to carry on extensive improvements this year.

"Practically all of the vast acreage will be planted to vegetables, including potatoes, cauliflower, beets, turnips, etc. A contract has already been signed up for a $30.000 crop of cauliflower. The Japanese have expended alone $100,000 for irrigation purposes."

Up North

A dispatch from Hood River, Oregon, notes that:

"M. Yasui, local merchant, has purchased the 20 acre hearing orchard place of J. R. Shelton on the East Side. While the consideration has not been confirmed it is reported to have exceeded $15.000. Sales of strawberry and apple acreage to Japanese this year have almost equaled those of white buyers. Mr. Yasui already owns extensive apple and berry holdings in the Dee and Summit sections."

They Grow Some Rice

Investigations in Glenn County rice fields show that:

"Of the 40.000 acres of rice being grown this year in Glenn County 14,300 acres, or slightly more than one-third, is leased and operated by Hindus and Japanese. This is according to careful estimates made by the various canal and land companies operating here.

"On the P. B. Cross lands where 11,900 acres of rice are growing, 4,000 are in the hands of Japanese and 450 are leased to Hindus. Of the 3,000 acres on the Spaiding ranch, 2,600 are leased and operated by Hindus."

The Sacramento West Side Canal Company reports acreage leased to Hindus, 5.850; to whites, 10.850, while reports from Butte County show that under one canal company Hindu farmers are farming 3.870 acres; Japanese, 2,400; whites, 15.000. The Chico Enterprise calls attention to an advertisement in the Colusa Sun giving notice of the formation of a partnership between 25 Japanese individuals, firms and corporations to be known as the Chico Rice Company. Their principal place of business is Colusa.

Down South

The Santa Ana Register reports a meeting of tho Associated Chambers of Commerce at Placentia, when H. H. Covell of Orange County stated:

"Japanese are coming into our communities and paying more rent for land than a white man can afford to pay and make any profit. The white men with families are gradually dropping out of the community, and if the situation continues it will be only a matter of time until the lands there are occupied entirely by Japanese.

"The higher rentals and the heavy production under cultivation by the Japanese will last for a time, and then lands will commence to depreciate in value. This, together with the section populated with Japanese, will force white people to sell their lands at a loss and move away in order to withdraw from the surroundings.

"It is only a matter of time until my property will be entirely surrounded by the little brown men. I

have good holdings and I don't want to dispose of them, but I may be forced to do so unless I am content to continue my residence with only these men and their families as my neighbors.

"The situation is not only becoming serious at Cypress, but in other sections of the state, and it seems to me that it is time some concerted action be taken by all communities."

* * *

Another week some economic considerations; what the Japanese themselves think; also some resolutions which have been passed in California.

EUROPEAN FARMERS GETTING BACK ON THEIR FEET

Crop prospects in eastern Europe are much better than previous reports have indicated. Bulgaria and Roumania probably will export 1,650,000 tons of bread grains from current crops compared to 3,900,000 tons in average pre-war years. In the wheat producing region of southern Hungary the average planted this year is fully 90 per cent of the normal pre-war acreage. On the eastern border of Poland and the western border of Russia the population was largely evacuated during the war. At present, however, the peasants are returning despite the fact that food conditions are very bad. In some places they are living on bread made from grass, nettle and heather. Throughout Germany the entire acreage is under cultivation although it is presumed that the yield will be below normal, due to the lack of fertilizers. Belgium is very highly cultivated with good crop prospects, while France and England have both been seriously affected by drouth and their prospects in bread grains are not encouraging. In east Galicia 90 per cent of the peasant holdings are in crop.

Specialists of the United States department of agriculture spent seven weeks in travel through southern France, northern Italy, across Jugo-Slavia, through Croatia and Slavonia, the great wheat districts of southern Hungary, and Transylvania to Bucharest in Roumania and north through Roumania, Bukowina, and Galicia, to Warsaw in Poland; thence west through Germany to Holland; through Holland, Belgium and northern France to Paris. During this tour opportunity was afforded to examine the agricultural situation in the region traversed.

One feature of outstanding agricultural importance is that in Poland, Roumania, Croatia and Slavonia the governments are now limiting the size of the estates to maximums of from 200 to 400 hectares (a hectare equals 2.471 acres), the land in excess of these limits being distributed among the peasants. In Roumania, where in many instances large estates have been redistributed among the peasants, the cooperative purchase and use of machinery by the peasants has been promoted, so that a number of neighbors may farm their tracts as one unit with less hand labor. Under the system of land tenure which has prevailed the peasants operate their land in small holdings which average about eight to ten hectares in area, from one-half to two-thirds of all the land being held by the peasants. Under the peasant system of farming the peasants live in villages and go out to their fields for work daily. In this way much time is wasted going to and coming from work. On some of the estates which recently have been subdivided peasant houses are now being built for the permanent residence of the small land owners. This may result ultimately in locating each peasant as a permanent dweller on his farm.

As a rule the farmer of eastern and northern Europe practices a good rotation, tills his land well, and fertilizes even more extensively than the American farmer.

THE EDITOR'S WIFE

"I hate prunes," she said, "and I shall have nothing to do with anyone who sells em." Four clerks gathered around and stared at her as one gone mad; the proprietor informed her he would sell anything he liked. "All right," said she, "and we'll print anything in our paper that we think best; but you ordered the paper stopped because we printed something you didn't like."

HIDES AND SKINS

The live stock man who wishes to secure the greatest return for hides and skins will do well to secure Farmers Bulletin 1055, "Country Hides and Skins, Skinning, Curing and Marketing." It may be had by writing Secretary of Agriculture, Washington, D. C., and by giving number and title.

Country hides and skins make up more than one-third of all the hides and skins produced in this country, and their condition on arrival at the tannery is of vital interest to all who use leather. Too often the value of "country" hides for leather making is less than that of "packer" hides because less care and skill are shown in the "take-off" and in curing and handling. In consequence the hide trade discriminates between "country" and "packer" hides and skins, and pays less for the former. This bulletin shows how farmers, ranchmen, and country or town butchers may produce hides and skins of better quality. It gives detailed directions for skinning the animals and for salting, curing and handling the hides and skins, with suggestions for more advantageous marketing, to the end that both the producer of hides and the user of leather may be benefited.

ALFALFA SEED PRODUCTION

Years ago the United States department of agriculture demonstrated that the "high divide" section of country along the Colorado-Nebraska boundary is the ideal alfalfa seed producing region of the United States. The extreme elevation, together with the dryness of the atmosphere and the hot summer sun, furnishes the key to the big successes that have attended alfalfa seed production there. These conditions are likewise ideal for the harvesting of the seed crop.

It follows logically enough that like conditions prevailing elsewhere should reveal new fields for alfalfa seed production. That conditions paralleling such as obtain in the "high divide" section are met with in the high altitudes of the Victor Valley and Antelope Valley regions is a fact recognized by well informed agricultural authorities in California today. And it is no secret that steps are already being taken to make a practical tryout on a considerable scale of producing alfalfa seed for commercial purposes according to modern methods of procedure in these sections. Soil, water and atmospheric conditions are precisely to order in these highly favored localities in Southern California.

At the Antelope Valley fair this year were on exhibition samples from a five ton crop grown under ordinary conditions by a local rancher that showed a plumpness and brightness of seed not to be excelled, and it was entirely clean of noxious weed seeds.

It is predicted that within five or ten years at the outside the Antelope Valley will witness the development in a high degree of the enterprise of growing alfalfa seed as a commercial venture.

WATER SUPPLY OF SAN DIEGO COUNTY

The facts in regard to the water resources of the vicinity of San Diego are presented in detail in a comprehensive water supply paper entitled "Geology and Ground Waters of the Western Part of San Diego County," just published by the United States geological survey, department of the interior, as Water Supply Paper 446. This paper, which contains 313 pages and ten large maps and 55 other illustrations, is the result of an investigation of the geology and water resources of the region made by the geological survey.

A copy of Water Supply Paper 446 can be obtained free of charge by writing Director, U. S. Geological Survey, Washington, D. C.

Four cotton gins at Gadsden, Arizona, are in full operation and ginned cotton is shipped daily.

"I Began Right"

GOING to the root of the matter—the seed bed from which the roots take their food—you get at the principal source of crop success or failure. That's why a wide awake farmer, when asked the secret of his bumper crop, pointed to his International disk harrow and said, "I began right. I built up, not down."

No matter how rich your soil, you cannot expect big yields unless you give your seed bed a square deal. Get a good disk harrow—one built by men who know every angle of the business through long experience and study. You have too much at stake to buy an experiment.

The 1919 International line of disk harrows is the most complete we have ever offered. You know your soil. Whatever its needs, we have the type of disk harrow suited to them. If a sandy, loose loam, the two-lever type answers every requirement. If hard, stony, or trashy ground, the three-lever type, with its center depth regulator, insures a firm, compact seed bed. If you use a tractor, see our leverless tractor disk. Whatever your power equipment, we have a size that utilizes it to best advantage. Ask your local dealer to point out to you the exclusive features of each type.

Every implement in this line is built to serve fully some particular farm purpose, to save your labor and time, and make you money. The line includes open end, closed end, and flexible peg-tooth harrows, spring-tooth harrows with single and double end teeth, and one-horse cultivators with every kind of tooth and shovel equipment.

Check over the list of machines in this advertisement and write us for full particulars about any that may interest you. We will, on request, supply you with a catalog, showing full details of construction and operation.

The Famous Hardie Junior is a Real Power Sprayer

It has sufficient capacity for two lines of hose. It has plenty of power for high pressure effective spraying. It is little in first cost, weight, and upkeep. It is big in real value, engine power, pump capacity and ability to do successful spraying. We believe this is the greatest small power sprayer ever manufactured, and placed on the market with phenomenal success in every fruit section in United States and vouched by thousands who own the Famous Hardie Junior. Equipped with 1½ horse-power engine, battery ignition, 150-gallon tank with mechanical agitator, capacity of four gallons per minute with a steady working pressure of 200 pounds, and two 25-foot of the best spray hose, fitted with spray rods and nozzles; 4-inch tire truck with pole or shaft.

All for $325. *Delivered anywhere in this state*

If truck is not needed, deduct $55.00.

These prices are subject to change without notice. The wise buyer will place his order now.

This low price is made possible by big production.

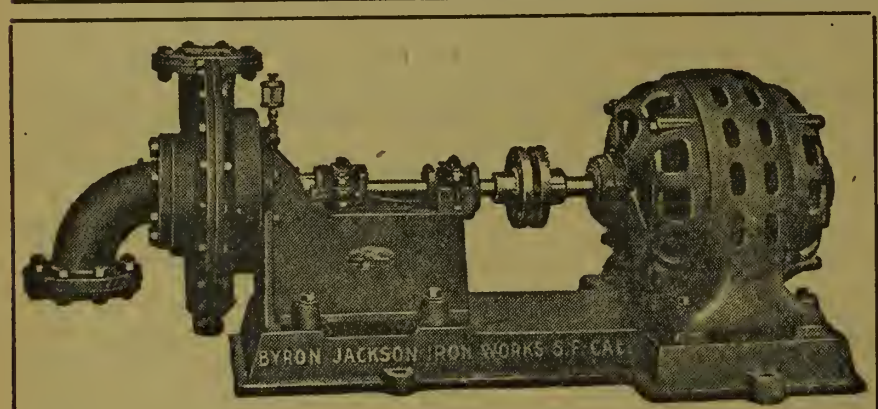
If you are interested in other types and sizes of the HARDIE POWER SPRAYER, write us for the big spray catalog, and learn why we can offer more spray pump value than any other spray pump manufacturer.

The HARDIE ORCHARD GUN is $12.00, none better. Every one is guaranteed to give satisfaction to the user, or his money refunded.

The Hardie Spray Hose is the safest hose to buy.

The Hardie Manufacturing Co.

224 N. Los Angeles St., Los Angeles



Have You a Producing Ranch?

Questions and Answers

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Curing Lemons

What is best home method of keeping lemons? That is, where you only have one tree and they ripen faster than you need them some parts of the year and you want to keep a few along for other times when they don't ripen fast enough. We find they shrink and wilt. After the lemons have been put away for some time they are covered with red spiders. What is the remedy? The spiders are also on the tree.—Subscriber, Long Beach.

Some of the finest and plumpest lemons we have ever seen were taken from a pit which had been dug adjoining the lemon tree. The lemons had been picked and placed in the pit with the sandy soil shoveled back on the lemons and the whole thoroughly wet down with irrigation water. The subsoil was very loose and the surplus water soon drained away, leaving the moist soil about the lemons. Some months later these were taken from the moist earth with a texture like wax and perfectly cured. Of course greatest care was taken to pick without bruising and to see that the soil practically surrounded every fruit. Others have been kept by placing in moist sand, a layer of lemons, a layer of sand. This prevents undue evaporation and allows them to cure very slowly. The more common method is to wrap the fruit in scraps of paper. Newspaper will do, though wrapping paper is preferred. Of course the commercial method consists of storing on trays two or three lemons deep and stacking the trays so as to admit air sufficient to prevent sweating and decay and still keep proper degree of humidity to prevent evaporation. This can be determined by an amateur by frequent observation. The red spider should be eliminated before the fruit is removed from the tree. This is best done by application of pure flowers of sulphur in the form of dust, usually before picking.

Scale on Orange Tree

I have three orange trees, two navels and one Valencia. They are badly scale infested. Of course I can't have them fumigated as they do in the groves. What can be done? Several years ago when they were quite small I "painted' them with kerosene. They were so badly infested then that I thought I would either kill or cure them. The kerosene killed most of the leaves, but they immediately came out all new and absolutely clean. No treatment since, and too large now to kerosene them as I did then.—Subscriber.

If unable to have fumigated would use kerosene emulsion or other good formula as given in our recent spray number, or perhaps still better buy a small can of one of the prepared mixtures for spraying. These may be had in almost any quantity and generally prove most dependable. A small spray pump can be had for a few dollars or one could scrub the trunk and larger branches and use whisk broom for "spraying" the solution over the leaves. This is rather a wasteful method and probably in a short time the waste of the solution would more than offset the cost of a small hand pump.

Sunburned Grapes

Will you please tell me what is the trouble with my grapes of which I enclose a sample; also cause and the remedy? I sprinkled them with sulphur four times last winter. — Subscriber, Claremont.

Prof. F. Flossfeder of the University of California answers: This is a case of grapes being sunburned, the cause of which may have been exposure to very hot and dry winds so that the vine evaporated more water than the root system would absorb, and the result was sunburn. This will not only happen on the south and west side of the grapevine but also on the east and north. Another cause of sunburn is heavy winds exposing the grapes very suddenly to the hot rays of the sun. Tokay and Muscat are very much subject to sunburn.

Pasturing in Vineyards

Is it advisable to pasture sheep in vineyards after the fruit is removed? —Subscriber, Los Angeles.

The above question was referred to Prof. F. Flossfeder of the University of California and he answers:

"As long as the vines are green no sheep should be turned into the vineyard. However, after the first frost when the leaves will be destroyed there can be no objection to having the sheep in there, provided they do not come from a pasture where weeds such as Johnson grass and Bermuda grass were present. As long as the grapevine is green it will manufacture and store starch in its root system for the year following, which is a very important factor. A good many people who have vineyards are under the impression that the pasturing of the sheep will destroy the grape leaf hopper. This insect, however, lives not only on the grapevine but in the winter it will hibernate in alfalfa fields which may adjoin the vineyard. In the spring following it will return to the vineyard and commence to work there. Last year we started to carry out experiments along this line, but I am not in a position to give you a definite answer as to the results. As to the price of vineyard pasture for sheep, I wish to say that $1 per acre is considered, around Fresno, a very good price, but since everything has gone up 100 per cent, although I do not advise the pasturing of sheep in a vineyard, I think $2 an acre would be a fair charge."

State Land Settlement

After reading the article on land settlement in the Cultivator of October 11 I wonder if it would be possible to get a location in Imperial County on which such a settlement is to be made.—Subscriber, Escondido.

State Land Settlement Board, Berkeley, can give any information it may have as to prospective settlers, but we may say that as yet there is no definite decision as to any particular parcel of land for the next settlement. It will probably be several months before any definite announcement is made. The Cultivator will be sure to pass on the news to its readers. It may be of interest that the United States land office announces that on November 3 at 9 a. m. certain land in the Imperial Valley will become subject to settlement. Regarding exact location of these lands or of other lands write United States Land Office, El Centro.

Codling Moth

When should apple trees be sprayed to get the worms that get inside the apples and those that get under the bark? What solution should be used? —Subscriber, Escondido.

A thorough spraying of trees in midwinter may possibly aid somewhat in controlling codling moth, especially if application is made with sufficient force to drive it under scales of bark of tree. Other winter treatment also consists of steaming or scraping the boxes or sacks in which the insect is pupating. Vast numbers of the moth may be destroyed in this way also by inspecting the bands about the trees which may have been placed there to induce the moth to hide during the winter season. The first really effective spraying to destroy the codling moth is at blossoming time then again some two or three weeks later and oftentimes a half dozen sprayings during the summer. For formulas for sprays may be found on pages 136 and 137 of the Cultivator of August 9.

Grafting Walnuts

This is no season for grafting walnuts, though the question has come to us within a short time, but it may be in order to remark that this is a good time for planning of grafting season's work. Desirable trees may be found

at this time when the nuts are being harvested, and the scions engaged for next winter's work. As to the tree it seems there is no need of particular treatment other than to be sure that the ground is kept in best of condition during these fall months. The Cultivator is planning for an article on grafting which will be given a few weeks later when it will have more immediate interest.

Oak Root Fungus

Can you tell me if oak root fungus can be spread on farm tools such as a spade after digging around plants or trees affected? I have been told that by digging around roses affected and sprinkling with sulphur the fungus could be killed.—Subscriber, Ventura.

It is very probable there would be danger of carrying the fungus on point of spade or other implements to roots of other trees which are susceptible to this fungus. Especially where the spading was deep roots injured by the spade would afford excellent lodgment for the fungus. We do not know as to the effects of sulphur on this fungus, but so long as the sulphur, or at least sulphurous acid contained in the sulphur, is proving beneficial when applied to some soils it would be a harmless and possibly beneficial experiment. We would be glad to hear from readers who have made applications of sulphur to ground where the oak root fungus exists.

Diseased Doe.

I have some rabbit does that have scabs on their coats. What is it? What will cure it?—Subscriber, Van Nuys.

The writer would call this an advanced stage of vent disease; cause, damp, dirty hutches or breeding to unhealthy animals. It is contagious and will spread through hutches. It is wise to examine all does bought for breeding, as one unhealthy doe will infect the buck and he spread it. Apply to organs with medicine dropper a 25 per cent solution of argyrol, every three or four hours. Many does sit in damp corner of hutch and thus become affected with disease. Keep hutches dry.—W. D. W.

Keeping Grapes

Kindly inform me as to how grapes are preserved for the winter.—Subscriber, Jackson.

As grapes are not commonly used in making preserves we take it the information desired here is as to storage and holding fresh table grapes. The usual method in California is through packing in thoroughly dried redwood sawdust or cork dust and keeping at a temperature of from 36 to 40 degrees in storage warehouse.

Self Sterile Plum

Referring to an article which appeared in the Cultivator of September 27, which touched upon pollination, an Anaheim subscriber says that his thrifty young Satsuma plum trees, four years old, bloomed heavily but blossoms all dropped. He did not get 100 pounds of fruit from the five acres. Experts told him that the trees had been pruned too heavily and threw out especially strong wood growth instead of fruit bud growth. The article touched upon the necessity for crop pollination and subscriber wishes to know if pollinating varieties can be grafted on limbs of the Satsuma. This is entirely feasible and if experts may be had to do the work a couple of years would secure the setting of sufficient Burbank or other scions which would supply pollen.

Wireworms

I am sending you a bug (small specimen) that has been eating my flower seeds planted in box, small plants and corn on the stalk. Kindly tell me what it is and what to do to get rid of it.—Subscriber, Carpinteria.

Unfortunately the specimen when it arrived was little more than a smear on the paper. However, it looked very much like the remains of a wireworm, and from the question above we take it it is this pest, one of the worst affecting the soil. The only remedy is sterilizing the soil by steam, carbon bisulphide or formaldehyde. In potting soil or on the greenhouse bench this is often done, but in field practice the only method is to rotate crops so as to drive out the pest. This will require a couple of years. In planting Lima beans some relief is sometimes secured by also "planting" in the rows pieces of potato. These pieces are left with string and marker on the surface and these traps removed occasionally and the wireworms trapped by the potatoes are destroyed. The same piece of potato or trap can then be returned to the soil to capture more of the pests.

Saltbush for Poultry

Inclosed is sample of a plant which I understand is known as Australian saltbush. It grows in profusion about here, particularly on vacant lots about town and along the roadways. I have been feeding it to a small flock of chickens which eat it greedily. Can you give me any information as to its food value? If it has much value as green feed for chickens the fact should be made generally known for the possibilities for its production are practically unlimited. If you do not care to publish an article about it in the Cultivator will you kindly let me know where I can obtain the informatioon I want by bulletin or otherwise? I suppose, of course, the Cultivator has told all about it before, but I did not happen to see it.—Subscriber, El Cajon.

The University of California issued some 20 years ago a very complete bulletin, No. 125, touching upon the value of the Australian saltbush. Since that time little attention has been given to it though the plant has become thoroughly established or naturalized under California conditions. Only in more recent years has its value as a poultry feed been appreciated. The department of agriculture, Washington, D. C., is now issuing Bulletin No. 617, "Australian Saltbush," by Roland McKee. Neither the state nor the federal department bulletins give any items as to its value as a poultry feed. It is only in the central and southern end of the state that the plant does well. It is also being planted to a limited extent in the Salt River and Yuma valleys of Arizona.

A LETTER FROM THE RICE FIELDS

Word comes from Sacramento that the first rice shipment of this year's crop in the valley sold at six cents a pound. This is the highest price in the history of California rice growing, and is one cent above the figure predicted several months ago. The first shipment consisted of 11,000 sacks. Harvesting of the crop is now well under way in various parts of the valley, and it is declared that the total yield will be approximately 4,400,000 sacks. This surpasses last year's yield by 1,000,000 sacks.

Last year the rice acreage of the valley totaled 110,000. This year it is 140,000 and the value of the 1919 crop will be at least $25,000,000 or $12,000,000 more than the 1918 crop.

The yield per acre in the valley this year averages 30 sacks. This is ten sacks higher than the yield in the Southern states. A number of growers, experimenting with the Edith or Western variety of rice, report an average yield of 38 sacks per acre of this variety.

The high price being paid this year for California rice is due mainly to the shortage of crops in other rice producing sections.

LOOK OUT FOR CORN BORER

The office of pest control of the department of agriculture asks assistance in obtaining information with regard to possible occurrence of the European corn borer in California. This insect now occurs in several localities in the northeastern states and is a very serious pest, causing at times a damage of from 50 to 75 per cent of the corn crop. There is no method of controlling it under field conditions. During the fall and winter the pest is most easily found in stalks that have been stripped of leaves by live stock. Its presence is indicated by holes about one-eighth of an inch in diameter, generally with discolored margins, and usually plugged with borings.

THE "W-W" (Hammer) (Principle)
ALL PURPOSE FEED GRINDER

The "W-W" can "beat it" —You can't beat the "W-W"

"The proper place to mix feed for stock is outside not inside the stomach."

The proper, practical, principle to employ is the hammer process.

W-W Grinders are constructed on an entirely original principle. Hay, grain — any kind of feed, is reduced to any degree of fineness by a beating process.

Nails, stones and other hard substances do not injure the mill.

The square faced hammer while pulverizing the feed, throws out the nails, bolts or other materials that might get into the mill in the feed.

The W-W is an ALL PURPOSE Feed Grinder, practically indestructible, easy of operation and with greater capacities for smaller horse power than any machine offered.

It will successfully grind anything fed to stock in California. Is also used to pulverize fertilizers.

W-W mills are built in a wide range of sizes and types having capacities from 500 pounds to 8 tons per hour—a size for every feed. Write for a list of California and Arizona feeders who are using W-W Grinders, also book of letters of what they say.

It will pay for itself.

Lubrication Facts

IN discussing the economy of proper lubrication of the tractor, Raymond Irving says in the Tractor & Trail:

Probably you know the totals of the various items that make up your operating expenses; repairs, fuel, oil and accessories.

But have you figured out what causes these operating expenses to be high or low? If you have not figured this out, you will be surprised to find out what an important part correct lubrication plays in keeping down the cost of operating your tractor.

The low operating cost for your tractor is the combined result of four basic economies, each of which is dependent upon correct lubrication.

Economy of Repairs

The first of these economies is the economy of repairs. When you start out to do a day's work with your tractor, you expect its powerful engine to operate smoothly and efficiently. But do you realize what is taking place inside the engine?

Your tractor engine has many moving parts. If these parts were permitted to rub together without lubrication, disastrous friction would wear away the rubbing surfaces, and your engine would soon be useless.

To prevent this wear oil is introduced between the frictional surfaces. This oil, if the film be of the correct thickness. is about .003 of an inch thick. When your engine is in operation this film of oil wears out, the metal is protected, and as the oil film wears out new oil of the correct body and character to meet the lubricating requirements of your engine and of high quality to withstand the heat and pressure must be applied. Only oil of these characteristics will maintain the proper film between the metallic surfaces.

You cannot picture to yourself 3.000 degrees Fahrenheit—the approximate temperature at the instant of combustion in the combustion chambers of your engine. If that heat were permitted to continue unchecked, the cylinders would soon be a mass of molten metal. But the cooling system and the lubrication of the engine protect it against this excessive heat.

But friction with its disastrous heat must also be overcome. This task falls entirely to the lubricant. If the oil is either low in quality or incorrect in body it breaks down under the intense heat, loses much or all of its lubricating quality and the metal parts, expanded by heat, come into contact.

Damage follows—because an engine must either wear out oil or wear out some of its moving parts.

In a correctly lubricated engine the oil takes the wear but the metal is saved.

Automotive engineers, service and repair men have stated that over 50 per cent of all internal combustion engine troubles are due to incorrect lubrication. The most common of these troubles are worn or scored cylinders, worn piston and piston rings, worn bearings and engine knocks caused by carbon.

You will not notice the results of incorrect lubrication during the first few weeks you operate your tractor, but with continued incorrect lubrication these troubles will become noticeable, and repairs will be frequently required.

The one main factor in keeping your tractor in working condition is correct lubrication. If, by correct lubrication, you can avoid the expense of replacing one of the main shaft bearings in your engine, for instance, this saving in money will more than pay you for correct lubrication for your tractor for an entire year. You must also take into consideration the fact that when your tractor is tied up for repairs, you are losing money through work being tied up.

Economy of Depreciation

Let us do a little figuring. Suppose your tractor cost $1200. At the end of the year you reckon up expense and roughly you find: Depreciation in selling value, say $400; repairs, ???; fuel: 1,200 gallons at 25 cents per gallon, $300; lubrication, perhaps as much as $70. Consider depreciation.

Why is it so large? It is because you have not paid enough attention to your smallest expense, that $70 a year for lubrication. It is only human to treat such comparatively small outlays lightly.

You, the tractor owner, should not do this, however, as guess work lubrication causes decreased efficiency and increased depreciation and the total yearly expenses go soaring.

Many tractor owners do not realize that due to incorrect lubrication and its attendant wear and tear on the engine they not only sacrifice maximum service from their tractors but also decrease their resale value by actual countable dollars.

Metal worn away by friction is gone forever. Worn engines never "come back."

The tractor owner who allows his engine to become badly worn through the use of an incorrect oil, shortens the life of his tractor and pays a high price for his carelessness. The more careful owners, however, who insist upon correct lubrication, receive the benefits of the economy of depreciation.

Economy of Fuel

You know the satifsaction of operating a tractor that runs smoothly and handles the load easily. You take pride in the ability of your tractor to keep working steadily, hour after hour, day in and day out.

Are you getting maximum power from every drop of fuel you use?

Maximum power is more than a matter of correct mechanical adjustment. Correct lubrication is a controlling factor.

If the fuel charge in the combustion chamber of your engine escapes down past the piston rings during the compression stroke, power is wasted If, on the power stroke the force of the expanding gases escapes past the piston rings, again power is wasted. Unless you maintain a proper piston seal you cannot obtain full power from your engine. To obtain full power you must use an oil of correct body and character to suit the piston clearance of your engine.

Fuel cannot escape past the piston rings on the combustion stroke nor can the force of expanding gases below pass the piston rings on the power stroke if you are using correct oil. The wastage of fuel through the use of oil of incorrect body is more common than many realize. It is true the loss on each piston stroke is small But when the piston strokes mount up into the millions, which does not take long, the fuel wastage is measured by gallons.

Correct lubrication may result in a saving to you of several gallons of fuel in one day's work. The yearly saving amounts to many dollars

Economy of fuel is another of the benefits to be derived from correct lubrication.

Economy of Lubricants

Do you know how long your tractor will run on a gallon of lubricating oil?

It will pay you to know this. The function of a lubricating oil is to protect friction surfaces. To protect, an oil must wear well. Some oils wear out very quickly because their inferior quality will not stand the test of service.

Often the oil is too light or too heavy in body, and, therefore, is unsuited to the design and construction of the engine. Excess oil then works past the piston rings and reaches the combustion chamber where it burns Carbon deposit forms, eventually resulting in knocking of the engine and costly overhauling and repairs.

But with oil of the highest quality and the correct body for your engine, the oil film does not break down and oil is not wasted.

There is a marked saving in the

COLUSA RICE MILL FLY WHEEL

Cast by Union Iron Works, San Francisco, (in one piece), in 1885, to send to China, but no vessel could put in in its hold, so it has lain idle till now. Was taken up the Sacramento River on a barge and moved to the mill on house mover's rollers. It is 22 feet in diameter, three feet wide on face and weighs 22 tons. The belt for it cost $2,500. Engine is 500 horse power, with two 250 horse power water tube Erie boilers which cost $10,000 delivered at mill (without setting).

STYLEPLUS CLOTHES

Belters are stylish

Styleplus for this fall include a wide choice in belters. Suits and overcoats both. Every man of every age and every physique can find the Styleplus that will make him look his best.

Styleplus are smart clothes for smart men. They have the style and they give the service. They sell, at known prices. We attach a sleeve ticket to each garment which tells the price.

Always see and try on clothes *before* you buy them. Buy at a *store*. And then you know what you are getting for your good money.

Clothes will be more expensive later on. Conditions are forcing prices up. Buy liberally for fall. Buy Styleplus now.

Legal Queries

Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department.

Legal Meeting on Sunday

Can a California corporation legally hold its annual meeting on Sunday. If it is so held and the legality questioned, would it become binding if a quorum met on a following day and approved the action taken? — Subscriber, Bishop.

The provision of law with respect to Sundays and holidays is as follows: "Whenever any act of a secular nature other than a work of necessity and mercy is appointed by law or contract to be performed upon a particular day which falls upon a holiday, it may be performed upon the next business day with the same effect as if it had been performed on the day appointed." The question has arisen in this state with respect to meeting of a board of directors held on Labor Day, a holiday. The supreme court there held that it was entirely permissible for the board of directors to meet on the date fixed for its regular meeting, which day in this case was the first Monday in each month, and the by-laws required it to do so; there was nothing in the general law or in the by-laws prohibiting such meeting because the day fixed fell on the holiday; it was a matter of their own volition whether the members should meet or not on the day stated, although their duty was to do so. The regular meeting of the board was not an act required to be performed by contract, and the board had no authority to meet at any other time than that fixed by the by-laws unless upon notice to all the directors. In a later case, however, it has been held that the general rule is that by-laws do constitute a contract between the stockholders of the corporation, thus negating the point raised by the court in the first case cited. However, that does not lessen the effect of the statement that the code section is permissive in effect, so that it is entirely possible that a meeting of the stockholders which was legally appointed by the by-laws to be held on the Sunday, could be so legally held. As to the other points of the question, the entire legality of the meeting would depend upon whether or not the Sunday was legally named in the by-laws as the day of meeting. The adjourned meeting suggested would have no greater effect if held on the succeeding day than the original meeting, it being in law considered as being initiated upon the day appointed for the first meeting. The legality of the meeting on Sunday is not so well demonstrated that for any important purpose the holding of a meeting on this day should be encouraged.

To Collect Note

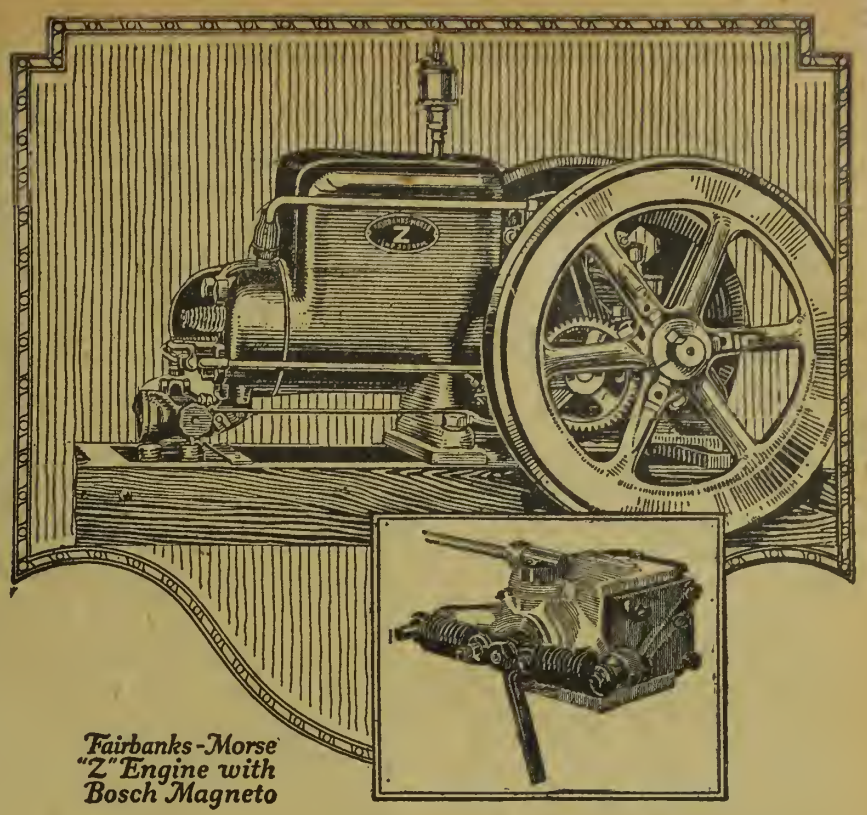
I hold a note for $200. Within what time after maturity may I start proceedings to collect?—Subscriber, Coalinga.

The statute of limitations upon notes made within this state is four years from the date of maturity; that is to say, proceedings for collection can be instituted at any time within four years from the date of maturity, and after that time as well, except that it is liable to be barred if the statute of limitations is pleaded.

Water Right

A owns a ranch through which runs a creek. His neighbor who leases his place has requested the use of water from this creek, to which A has consented, and he has so used the water for two years. If he continues to use this water, will it ripen into a water right? If so, for how long? Will it so ripen if charge is made for use of the water?—Subscriber, Paicines.

If the water is used under a license wherein the exclusive right of A is recognized, no right to that water would arise; it is not necessary that a charge be made; the only difficulty would be in the matter of proof if a right was subsequently asserted. That difficulty could be avoided by having a written license for the use of water signed by both parties stating that the license would terminate either at the option of A or at some definite time.



Fairbanks-Morse "Z" Engine with Bosch Magneto

Greater Engine Value

OVER 250,000 farmers bought the "Z" engine. ¶ They know it is powerful, dependable, and practically foolproof—truly a great engine. ¶ But now we announce the one addition which could possibly improve the "Z" performance—Bosch high tension, oscillating magneto ignition. ¶ So let the "Z" dealer near you show you in detail this greater engine value. ¶ Over 200 Bosch Service Stations combine with "Z" dealers to give every farmer buyer a remarkably complete engine service. ¶ Prices—1½ H. P. $75.00—3 H. P. $125.00—6 H. P. $200.00—All F.O.B. Factory.

Take the Toil Out of Ditching

When carried on in the usual manner—plow, scraper, pick and shovel—ditching is a tough job. Many thousands of the country's best farmers have fonnd an easy, quick and economical way. The purpose of this ad is to get in touch with those who still dread the job.

The "MARTIN" is the easy way

It does the work of many men; it does a better job in far less time. It is a simple, all-steel, reversible and adjustable implement, built to last a lifetime. Works in any soil, wet or dry, hard or soft, on hillside or level. Has many other uses other than ditch-making and cleaning.

Horse and Tractor Sizes Catalog, with full particulars, sent free. It contains a wealth of information on better ways to ditch. Address

California Farmer's Income in 1919

At the opening of the farmers' short courses at the university farm, Davis, Dean Hunt discussed the probable income of the California farmer during the present year and compared it with pre-war conditions. He said, in part:

"Although it is too early to give exact figures, it seems probable the farmers of California may receive for their products in 1919 not less than $600,000,000 and not more than $800,000,000. In the average figure the income may be divided roughly into $250,000,000 for field crops, $250,000,000 for fruits and $200,000,000 for live stock and animal products. This is between two and three times as much as was obtained, say, in 1914. As there are approximately 100,000 farmers in California, the gross income will probably not average less than $6000 for each farmer.

"Speaking broadly, it is customary to estimate at one-half the gross income the current expenses, including labor, except that which the farmer himself performs, but not excluding labor performed by other members of his family. It will, of course, be understood that figures used in this discussion cannot in the nature of the case be taken as absolute, but are chiefly valuable for purposes of comparison. On this basis, after deducting expenses the farmer's income would be $3000. To determine the labor income or the farmer's personal wage interest on the investment must also be deducted. The average investment in a farm in California in 1910 was approximately $18,000, the interest on which at five per cent is $900, thus leaving the farmer an average labor income of $2100. It may be that expenses have not risen as rapidly as the price of farm products, which, if so, would tend to make the labor income somewhat larger. On the other hand real estate and farm machinery have risen since 1910. It is not unlikely that the average investment in a California farm is at present $30,000, or at least is held at that valuation. Interest at five per cent would amount to $1500, thus leaving the farmer on this basis $1500 for his labor. The average farmer's wage or labor income may therefore be estimated for 1919 as somewhere between $1500 and $2100.

"Pre-war estimates indicate that house rent, fuel and food furnished by the average farm in the United States varied from $300 to $500 per year. In Santa Clara Valley these items aggregated about $350. Assuming the maximum figure because of present high prices, the average farmer has under this method of computation a labor income comparable with $2000 to $2600 a year in the city. If there are other members of the family whose work is utilized, then the family income will be increased by the cost of the outside labor which it displaces.

"How does this compare with pre-war times? During the first half of this decade the California farm had a gross income of, say, $3000. According to the above method of computation the farm income was $1500, while the farmer had left after deducting interest on his investment $600 for his labor. The change in five years in the labor income of 100,000 families from $600 to between $1500 and $2100 per year is an important fact, the results of which are easily observable, even though the percentage is not much, if any, greater than the rise in wholesale commodities during the same period. It is certainly proportionately better than that obtained by many salaried people. Even so, it does not give much work for the income tax collector.

"There is another way in which the farm owner has prospered, or at least appeared to prosper. It is in the increased valuation of his real estate. However, up to the close of 1918 the value of farm land in the United States had not risen as rapidly as commodities which the farmer had to buy. If he had sold his farm in 1918 he could not have bought as many commodities with it as in pre-war times. Unhappily, during the present season there has been a wild inflation in real estate from which only harm can come. Such inflation tends to decrease rather than increase wealth. In the end it will benefit very few farmers except those who were in debt for their farms.

"Doubtless some persons will find it difficult to understand the rather modest incomes which the average farmer is receiving in these times of high prices. It is especially confusing when one hears some fabulous but perfectly true tales of high returns, such as the sale of 40 acres of Emperor grapes on the vines, without expense and trouble of picking them, at $50,000, or the refusal of $90,000 for an 18-acre orange grove because it produces an annual income of $30,000. It may help to explain these striking contrasts to state that farm cost accounting studies made in various parts of the United States indicate that in any community one-fifth of the farmers make three times as much as the average in that community. Although it may be a far cry, if the state of California be considered one community, we may by applying this principle be justified in saying that there are probably 20,000 farmers in California who will make on an average during the present year not less than $4500 plus interest on the capital invested. It goes almost without saying that if 20 per cent of the farmers make three times the average profit there must also be 20,000 farmers that have a labor income enough less than $1500 to establish this average. Effective farming is, therefore, of prime importance to the man who lives in the open country, as well as to the man who is dependent upon the farmer for his food and raw materials for his clothing."

DECIDUOUS TREE PRUNING TO BE DEMONSTRATED

Arrangements for the second annual series of deciduous tree pruning demonstrations held under the auspices of the Los Angeles County farm bureau have been made to run from Thursday, November 13, to Monday, November 24. Demonstrations will be held at La Crescenta, Sunland, Long Beach, Pasadena, Downey, Van Nuys, Owensmouth, Pomona, Del Sur, Roosevelt, Littlerock, Burbank and Lankershim. Dr. J. C. Whitten, one of the best authorities in the United States on the subject of tree pruning, formerly head of the department of pomology at the University of Missouri, and now head of the division of pomology at the University of California, has been secured for this series. Considerable interest on the part of the deciduous fruit growers is anticipated, as following the first annual series of such demonstrations conducted by Dr. Whitten last year some very interesting results have been obtained. In some cases as much as three times the usual crop of fruit has resulted.

MORE POTATOES

W. V. Shear, for many years connected with the federal department of agriculture and now with the state department, is engaged in the work of certifying potato seed and aiding growers in producing more and better California potatoes. At present Mr. Shear is investigating conditions in Southern California and says that the southern end of the state is showing increased interest in potato planting. The tuber moth no longer has terrors for the planter, even for the spring crop. Ordinary hilling is found sufficient to give protection to the growing potatoes, and reasonable care at harvesting time prevents infestation.

California potatoes are now going to the northwestern states, though not without inspection, but the proper home inspection added to this gives assurance of acceptance of the potatoes at the other end.

ECUADOR EUCALYPTUS

In the valleys back of the Cordillera in Ecuador, from 8,000 to 10,000 feet above the sea, the country is generally devoid of trees, but the eucalyptus, introduced from Australia more than 40 years ago (about same time as introduced to California), seems to thrive there even better than in California, according to Howard L. Smith, special assistant, state department, now at Guayaquil. He says:

"The growth of the tree is so rapid that it may be profitably cut every five years, being then worth about five sucres (about $2.50). Each one, therefore, produces 50 cents worth of wood a year, when thus cut, and, as the trees may be planted from six to ten feet apart, the yield each year per acre on the average would vary between $220 and $600. It is the usual fuel of the country, either dried or converted into charcoal."

Porterville orchardists complain they can buy no Tuscan peach trees and other varieties are very scarce.

NURSERY STOCK IN FINLAND

The United States consul at Helsingfors, Finland, reports that a few buds are imported annually from Germany and Sweden, but nurserymen there have suggested to him the possibility of importing small lots of hardy trees from the colder sections of the United States. Only from the colder sections would the trees be adapted to Finnish climate. Hothouse plants and ornamental trees are imported in considerable quantities, presumably all from other European countries.

THE CAROB IN CALIFORNIA

I. J. Condit of the agricultural experiment station at Berkeley is author of Bulletin 309, "The Carob in California." It touches upon the adaptability of the tree in this state and has in addition a chapter by M. E. Jaffa and F. W. Albro on nutritive value of the carob. The bulletin touches upon the botany, climatic and soil requirements, propagation, planting, yield, varieties and, as noted, feed value.

CATTLEMEN'S CONVENTION

A convention of cattlemen under the auspices of the California Cattlemen's Association will be held at the California Building, Exposition Grounds, San Francisco, November 5. In outline the program is:

Wednesday, November 5, meeting called to order by President Nares; importance of Kendrick-Kenyon bills discussed by Dwight B. Heard.

Afternoon, report of marketing committee and discussion of Kenyon bill.

Thursday, 9:30 a. m., Director Hecke will discuss state department of agriculture; 10:00 a. m., reports of committees on transportation, national forests and grazing, and legislation; addresses by Hon. Wm. Kent and Frank D. Tomson.

1:30 p. m., public sale of registered Shorthorns at exposition grounds; 7:00 p. m., Shorthorn banquet.

Friday, 9:30 a. m., "A Slogan for the Live Stock Industry of California," C. E. Rachford; "Cooperative Marketing," H. C. Carr; resolutions committee's report.

1:30 p. m., public sale of registered Hereford cattle; 7:30 p. m., live stock breeders banquet.

SALE OF SHORTHORNS IN SAN FRANCISCO

The following well known Shorthorn breeders will consign entries to the sale of Shorthorn cattle to be held at the California Building, Exposition Grounds, San Francisco, on Thursday, November 6, at 1:30 p. m.: Ormondale Ranch, Redwood City; Caledonia Farms, Sacramento; Pacheco Cattle Co., Hollister; Estate of Thomas B. Dibblee, Santa Barbara; T. T. Miller, Hollister.

POTATO GROWERS

The Los Angeles County farm bureau is planning for a potato growers' observation trip to be held probably on November 3, though it is possible this date may be changed. The start will be from El Monte and the end of the trip will be in the San Fernando Valley potato section.

A big increase in the planting of Bermuda onions will occur this fall in the interior valleys of Southern California and this section will become a formidable competitor of southern Texas. Possibly 3000 acres will be planted in the Coachella and Imperial valleys if the plans of growers are put into execution. The proposed acreage will be more than three times as large as last year. The increased plantings are a direct result of the high prices secured by growers for their last season's crops.

Secretary Lane has issued an order that the first unit of the 45,000 acres of the Yuma Mesa project be sold at public auction in Yuma, December 10. This unit, B, contains 6,400 acres divided into about 500 farms of from five to 20 acres each.

Los Angeles County farm bureau meetings: Pomona, October 24; Inglewood, 24; Burbank, 27; Monrovia, 28; Glendora, Clear Water and Downey, November 3.

Chili Peppers in Orange County

By Ernest Braunton

DUST at present Orange County is red hot—with peppers—Mexican chili, long red and pimento. In the Garden Grove section things are particularly lurid, for here is the real home of the California pepper industry, and in one place there are fields aggregating 500 acres in one uninterrupted sweep of chilis.

The census of 1910 gave California 55 growers of peppers, with an acreage of 417 averaging seven and one-half acres to a grower. Today Orange County alone has about 5,600 acres, divided as follows: Mexican chili, 2,800; long reds, 800; pimentos, 2,000. Nearly all the last named are canned in Los Angeles and Santa Ana, for these are the sweet peppers as distinguished from the "hot" peppers. The total output will probably be 1,800 to 2,000 tons of dried chili, 500 tons of long red (dry) and 2,500 tons of the latter used green. These figures were given out by J. A. Knapp, of Garden Grove, who says that in this district the monetary returns from the pepper crop will exceed those from oranges, walnuts, beans, peaches, apricots, and eggs. This is a pretty "hot" story though it comes from a chili district.

The largest drying plant is two miles from Garden Grove and belongs wholly to Japanese. In this center there are 18 drying houses and nearly half as many warehouses. These are small, the average perhaps 16 by 24 feet, with walls eight feet high. The larger houses will each hold 1,500 trays of chilis containing about 30 pounds to a tray, but when dried the 30 pounds is reduced to about five. They are held in the houses six or seven days at strong heat. The first two days the temperature is kept at 140 and for the remaining four or five days at 120 to 125. During this time the chilis turn from a vivid scarlet to a sedate chocolate brown.

The drying season commences about October 10-20 and continues until frost catches the chilis in the field. The ripe peppers are not damaged by a light frost so they still come in after the plants have frosted. The season, therefore, usually closes in December, but during one mild and glorious winter it continued into February.

Sun dried chilis are almost a thing of the past, except with growers on a very small scale. In testing the efficiency of the drying process the experts first hold the pods to the light to see if they are clear and bright in color and then open the peppers to see if the seeds are a bright light golden yellow. If this condition has not been obtained they have not been well dried. At sacking time they are sometimes too brittle and will break up, but this is overcome by a light sprinkling with water before handling. These are the methods by which the Japanese were handling chilis as observed by the writer who was in several drying houses and warehouses.

Quite a different process of drying is being installed at the Knapp ranch three miles west of Garden Grove. Mr. Knapp has eight kilns or drying houses, originally equipped the same as the Japanese plant. The fact must not be overlooked that all these houses are heated by natural gas piped from the nearby hills. Four of the Knapp houses are now being converted into steam dehydrators, and in time it is expected this equipment will be installed in the remaining four. This gives Mr. Knapp the largest plant in drying capacity in the state. The equipment is being placed and operated under the supervision of G. A. Austin, representing the manufacturers, the Cutler Dry Kiln Company of Buffalo, New York. Mr. Austin is also installing plants for dehydrating chilis at Buena Park for Joannes Bros., one at the university farm, Davis, and another at Guasti, the two latter for grapes. All plants thus far are meeting with success, and instead of six or seven days the chilis of the future will be dried in 48 hours, perhaps less. They may be dried much quicker, but the art of drying lies in extracting the moisture without deterioration of the chili in quality or appearance.

One curious fact comes to light through a study of local weather conditions. It is quite evident that a good year for beans is apt to be a poor one for chilis, and vice versa. The present one is a chili summer, though a warm one. Peppers need continuous warm weather, not necessarily hot, but without fogs. It is well known that beans thrive best with foggy nights, especially the Limas. In the Garden Grove section chilis are fertilized, often with bone meal, but as the soil is light and sandy, the best white growers are depending heavily on cover crops. The industry is growing by leaps and bounds, but who consumes all this fiery stuff is a speculative question.

The Day Before at Los Angeles Livestock Show

If the photograph could have been taken two days later it would have shown a mass of human beings filling the space between the various live stock barns and the grandstand. The attendance is overwhelming the gatekeepers and the grounds are packed from early forenoon till after the society events of the later evening. The greatest interest is shown by the progressive live stock breeder, but farmer and urbanite are joining in every way to make a complete success of the event, the first of its kind at Los Angeles. There is not a vacant stall and every exhibit is of high quality.

AMERICAN COAL AT GENOA

In view of Italy's almost complete dependence in the past upon Great Britain's coal supply, it is interesting to note that during the week ending August 23 the bulk of the coal landed at Genoa came from the United States. The amount was 51,228 tons as against 10,835 to us from Cardiff, Wales.

The Institute of Makers of Explosives has issued a series of bulletins on the uses of explosives. One of these devotes 80 pages to discussion of use of explosives in tillage; another has to do with the making of ditches; another with clearing land of stumps, rocks, etc. The books may be secured of the institute, New York City.

Feeding Dairy Cows in California

By F. W. Woll, in Circular 215, Just Issued by the University of California

MANY of the dairy cows in this state, as elsewhere, yield only small amounts of milk, even when fresh, and have but little "dairy blood" in them, being the issue of grade or scrub cows mated to bulls of unknown breeding. Some of these cows cannot be changed into profitable dairy animals by any special system of feeding that might be adopted and the only hope their owner can have to make any money on them is to sell them for beef. The dairy production of most cows can, however, be greatly improved by adopting a system of feeding that will provide plenty of feed of a suitable character both throughout the lactation period and while the cows are dry. In the interior valleys alfalfa is generally the sole feed of cows, and if of good quality and supplied in ample amounts it does very well for cows giving only a small or medium flow of milk. Additional feed must, however, be supplied for good dairy cows that produce two and one-half to three gallons of milk or over a day, in order to insure the largest production of which they are capable, viz., silage or roots, when green feed is not available, and also some grain feed. Good milch cows will give profitable returns for additional grain even at present feed prices and when fed roughage of excellent quality.

The character and kinds of grain to be fed will depend on the available roughage and on the market prices of the feeds. Barley, dried beet pulp, cocoanut and mill feeds are ordinarily the cheapest concentrates in this state; as these feeds have approximately a similar feeding value, protein content, grain mixtures may be made up in accordance with the relative cost of the feeds. Common mixtures are:

Dried beet pulp, rolled barley (or wheat bran), and cocoanut meal, in the proportion of two-one-one, by weight.

Rolled barley and dried beet pulp, equal parts, or mixed in the proportion of one-two or one-three.

Dried beet pulp, three parts, and cocoanut meal, one part.

Wheat bran (or shorts), ground milo (or rolled barley), and cocoanut meal, equal parts by weight, etc.

These mixtures may be fed with either alfalfa hay alone or with alfalfa hay and silage or roots. If grain hay is fed, at least a pound of cottonseed meal or linseed meal should be added to supply sufficient protein for a maximum milk flow.

The silo has proved a good investment on California dairy and stock farms, as it has in Eastern and Central states. It enables farmers to secure a maximum feed supply from crops like Indian corn, sweet sorghum, grain sorghums (milo, Egyptian corn, feterita), small grains, Sudan grass, rye grass and clover, or alfalfa (first and last cuttings only). All these crops, with the exception of clover and alfalfa, are high in starchy components and supplement nicely alfalfa hay in feeding growing and milk producing animals.

With a silo on the ranch the farmer can carry a maximum number of cows and supply his stock with palatable, succulent feed of uniform quality at any time during the year, thus furnishing conditions that are especially favorable to a large milk production. Where silage crops cannot be grown successfully, or where conditions do not permit the building of silos, root crops, like mangels, carrot or turnips, may be raised to advantage on good land; where large yields are obtained roots make excellent substitutes for silage, although they are not as convenient to feed out. On hilly land and on ranches with only small areas of arable land it is necessary to feed some grain or other concentrates in order to reach and maintain a satisfactory milk flow throughout the lactation period.

In order to secure the best results from a dairy methods of herd improvement must always be practiced along with correct feeding methods, viz., culling the herd by disposing of all low producers (cows yielding, say, less than two gallons of milk daily during the early part of the lactation), and adding to the herd young stock or milch cows capable of a large production. In all cases the best pure bred bull that one can afford, of the dairy breed preferred and of a family of high producers, should be placed at the head of the herd. Only in this way can permanent improvement in the production of the dairy be assured.

Liberal feeding is always advisable for good dairy cows. It is only the feed eaten beyond that required for body mainteuance which gives returns "at the pail"; if fair proportions of nutrients of different character are fed, such as are furnished in alfalfa and silage made from the crops mentioned above, with or without grain, there is no danger of fattening good dairy-bred cows, which are the only kind that permit of profitable dairying under present-day conditions.

As concrete illustrations of rations that may be recommended for dairy cows of different productive capacity under present conditions in this state the following are suggested:

For cows producing less than a pound of butter fat a day (less than three gallons of milk per head): (1) Thirty pounds of alfalfa hay (or all they will eat; (2) Eighteen pounds of alfalfa hay, 30 pounds silage (from Indian corn, milo or sweet sorghum, small grains, Sudan grass, etc.).

For cows producing over a pound of butter fat a day: (1) Twenty-five pounds alfalfa hay, one pound of concentrates for every four to five pounds of milk produced. Concentrates suggested: Barley (or wheat bran), dried beet pulp, cocoanut meal, mixed in proportion two-one-one, by weight (or other grain mixtures given before; (2) Fifteen pounds alfalfa hay, 25 pounds silage, the same grain mixture as above in a somewhat smaller proportion, say one pound to every six pounds of milk.

If alfalfa costs more than 40 per cent of the average price of the grain feeds, it is relatively expensive, and less hay and more grain feeds will make both a more economical and efficient ration than those suggested.

When grain hay is fed and not alfalfa, either of the above rations will be improved by adding about a pound of cottonseed or linseed meal per head, since it is necessary in this case to supplement roughage with a grain mixture containing some high protein concentrate; linseed meal is too expensive to be fed to dairy cows in any but small amounts, but cottonseed meal furnishes more protein for the money, and with either of the mixtures given, makes a palatable and effective grain feed. If it cannot be obtained, wheat bran and cocoanut meal mixed in the proportion of two or three-one, by weight, will make a good supplement when grain hay is fed.

PROFITABLE BOYS' CLUB WORK

Reese Evans, a member of the Davidson School Boys and Girls United Clubs, is still winning out with his venture in breeding registered Durocs. Originally he purchased one sow for $10, raised the animal at a cost of $16.45, and she is now valued at $60. He took her to the Southern Arizona fair, at which he won two first prizes, his winnings aggregating $15. He used this $15 to buy another pig, and so proceeded to raise nine acres of corn. He is only 15 years old and says he is engaged in providing means to carry him through high school and college.

A farmer once called his cow
"Zephyr,"
She seemed such an amiable heiphyr;
When the farmer drew noar,
She kicked off his ear,
And now the old farmer's much
dephyr.

We cannot ever say that we have learned anything until it becomes a part of us, a habit of mind and muscle which it is easier to follow than to break away from.—Prof. P. G. Holden

Kings County Poland-China Sale

By B. S. Bennett

The Kings County Poland-China Breeders Association held their eighth semi-annual sale in Hanford, October 11. Those in attendance were not expecting anything sensational, and up to the time Earl McCune drove his sow, Edith Rose and litter, into the ring the animals were selling at good average prices. Earl McCune is a pig club boy and this sow was purchased for him by John M. Bernstein at the Sampson sale held in St. Joseph, Missouri, last winter. The litter was by Surprise Prospect, and it was announced from the ring that choice of the gilts in the litter, only, would be sold. The first bid was $200 rapidly rising to $850, when H. D. McCune, father of Earl, offered $250 for first choice pig from the gilt's first litter. Wm. Bernstein offered $250 for second choice and another offer of $150 for third choice made $650 offered for three of her pigs. She was finally knocked down to Les McCracken, of Ripon, for $1,250, who will breed her to King's Big Bone Leader, the 1918 grand champion boar.

Young Mr. McCune receives $1,250 for one pig and Mr. McCracken has three of her first litter sold for $650 if he cares to accept it.

The excitement over the sale of this five months old gilt for $1,250 had hardly subsided when Fred D. Ross' gilt Big Kate IV, by Rossmead Bob, was driven into the ring. From the way the bidding started it seemed that every breeder present desired this gilt. The price rapidly rose to $1,000, when Mr. Ross announced he would give $800 for choice of four of her pigs if she brought as much as the McCune gilt. This price was reached and passed in no time, the bidding narrowing down to M. Bassett and Dr. J. A. Crawshaw. When $2,000 was reached Les McCracken stepped in and was contender up to $3,000. When this price was reached Mr. Ross raised his offer for four pigs to $1,000. She was finally sold to M. Bassett, Hanford, for $3,150. It was announced from the ring that this was the highest price ever paid for an open Poland-China gilt. The Poland-China Journal of September 25, reporting the sale by Williams, Spruling and Wellington; Clymers, Indiana, of Buster's Kind, a March gilt by Giant Buster for $3,100, stated that this was the largest price ever paid for an open Poland-China gilt.

If this be true, California now holds the record for the highest priced gilt. Forty bred sows and gilts were sold for the fine average of $240. Nineteen young gilts average $77.35 and six young boars averaged $58.30, or a total of $11,700 for the offering. Ben A. Rhoades of Los Angeles, was the auctioneer, assisted in the ring by Geo. W. Bell and Ord L. Leachman.

M. Bassett Consignment

1—F. D. Ross, Hanford, $110.
2—Z. M. Dickey, Dinuba, $85.

John Bernstein Consignment

3—C. B. McNeil, Fresno, $205.
4—A. J. Van Cleef, Riverdale, $200.

Wm. Bernstein Consignment

5—J. M. Upton, Edison, $210.
5A—Chas. Carrithers, Delano, $120.

J. A. Crawshaw Consignment

6—Robt. Ruoff, Bakersfield, $130.
7—Wm. Pitt, Gosford, $130.
8—Frank Johnson, Hanford, $110.
9—Cy Clark, Modesto, $105.

W. T. Dice Consignment

10—H. Garouth, Delano, $155.
11—Les McCracken, Ripon, $140.
12—Les McCracken, $105.
13—M. Loveless, Lemoore, $155.

Haag & Son Consignment

15—Z. M. Dickey, $195.

R. G. Hamlin Consignment

16—W. L. Griffin, Fresno, $50.
17—E. C. Bennett, Hanford, $75.
17x—Z. M. Dickey, $50.
18—Les McCracken, $80.
19—J. A. Crawshaw, $100.
20—G. B. Martin, Visalia, $150.

Hubbard & Sons' Consignment

21—Cy Clark, $85.
22—W. M. Coward, Modesto, $75.
23—Fred Gibson, Hanford, $125.
24—$160.
25—Wm. Byrne, Bakersfield, $90.
26—Z. M. Dickey, $85.
27—Z. M. Dickey, $80.
28—Z. M. Dickey, $75.

H. D. McCune Consignment

30—W. M. Coward, $120.
31—H. T. Ashford, Lemoore, $215.

Earl McCune Consignment

29—Les McCracken, $1,250.

G. I. McCune Consignment

32—C. L. Newport, Hanford, $165.

H. E. McMahan Consignment

33—F. E. Bonstell, Hanford, $120.
34—Z. M. Dickey, $105.

Geo. Nehls Consignment

35—G. W. Post, Hanford, $50.
36—Les McCracken, $85.
37—Les McCracken, $80.
38—Z. M. Dickey, $75.
39—David Smith, Delano, $120.

C. L. Newport Consignment

40—Earl Hallen, Bakersfield, $100.
41—Les McCracken, $95.
42—A. J. Elliott, Tulare, $95.
43—Z. M. Dickey, $75.
44—Wm. Bernstein, Hanford, $85.
45—M. Bassett, Hanford, $150.

E. D. Ross Consignment

46—M. Bastett, $3,150.

W. D. Trewhitt Consignment

47—J. A. Crawshaw, Hanford, $195.
52—Cy Clark, $130.
48—Cy Clark, $105.
49—Roy Waltz, Hanford, $255.
50—Z. M. Dickey, $120.

B. D. Vanderburgh Consignment

51—Cy Clark, $110.

C. A. Vaughn Consignment

53—Robt. Smith, Delano, $110.
54—Wm. Bernstein, $170.
55—M. Loveless, $140.
56—W. C. Premo, Porterville, $180.
57—J. W. Case, Lemoore, $70.

R. L. Waltz Consignment

59—Z. M. Dickey, $50.
60—Z. M. Dickey, $45.
61—Les McCracken, $90.
62—Les McCracken, $75.

T. J. Woodworth Consignment

63—Lewis McKinney, McFarland, $145.
64—Edwin Pinkley, Pixley, $120.

TOP SENSATION 1ST

Hewitt Bros. at Van Nuys are owners of the coming young Duroc-Jersey boar, Top Sensation 1st. This fellow was the pick of the crack litter of 1918 at Winsor Ranch. He was sired by the celebrated boar, Top Sensation, litter mate to Great Sensation, and his dam is the great brood sow Sensation Rose Again. This boar was seen in the Southern California show circuit, along with other good show animals from the herd. These are of the famous litter shown at Riverside and Los Angeles last year, winning eight ribbons at either show. The boys have recently purchased a $700 daughter of the three-times grand champion sow, Model Defender Lady.

Many progressive farmers of today use printed letterheads for their correspondence. They lend dignity and prestige to their business.

SCRUB BULL A HANDICAP

A bull for beef purposes is worth just as much as the butcher will give for him, says W. E. Spangler of the Colorado agricultural college. He adds:

"But a bull at the head of your dairy herd is either worth more than you could get for him at the slaughter house or he is worth so much less that it would be safe to say he is worth less than nothing.

"A bull that sires a daughter that is worth less than her mother is a money losing proposition. One often hears the remark, 'My bull isn't much good, but he is better than none at all.' This remark in itself shows that the speaker is either new at the business or is barely making ends meet. A man who is making a success of the dairy business knows that if he wishes to continue his success he cannot be handicapped by a scrub bull.

"It is true that a good pure bred bull costs more money than a grade bull, and many small dairymen cannot afford to put out the money, but any group of eight or ten farmers can get together and form a bull association and thereby get the services of a pure bred bull at a less outlay of capital than they can get by using a grade bull.

Producing Animals Need Help.

Your stock have been through a strenuous season and face the unnatural conditions of winter stabling, crowding and winter forage to which domesticity subjects stock. These conditions bring on lagging appetites, susceptibility to colds, blood disorders, worms, bowel and kidney troubles.

Nature demands laxative elements in feed, tonics and blood purifiers to keep stock in tip-top shape to ward off disease. Supply these elements in their winter feed—give them

Dr. LeGear's Stock Powders

Insure sturdy offspring, get normal yield from milkers, have healthy draft stock ready for heavy spring work, get rapid gain on packer stuff by consistent use of these conditioners. Dr. LeGear's Stock Powders contain Iron for the blood, Nux Vomica for the nerves, Laxatives for the bowels, Kidney Regulators, and Worm Expellers.

Dr. LeGear's Poultry Prescription keeps hens healthy, insures winter eggs and better profits for you.

Dr. LeGear's Antiseptic Healing Powder cleanses, drys and heals sores and cuts quickly.

Dr. LeGear's Lice Killer (Powder) rids your flock quickly of lice, protects chicks, etc.

All of Dr. LeGear's Remedies are sold with a money-back guarantee that they will do all that is claimed for them. Ask your dealer—today. Sold by 40,000 dealers—never by peddlers.

GEORGE W. BELL

A BUSINESS AUCTIONEER

When in need of high class auctioneering service I would be glad to have breeders and farmers correspond with me. I have had years of experience, know values and know pedigrees. I am selling for many of the leading breeders of California and am prepared to deliver the same results that have attracted this custom. Terms reasonable. Write, wire or phone.

GEORGE W. BELL Tulare, California

All Ready at San Francisco

AFTER having carried their stock along in show condition for several months last winter, hopeful of the influenza epidemic coming to an end so that they would participate in San Francisco's first big exclusive live stock show, and then being forced to abandon the exposition, live stock interests of California and adjoining states were determined to go ahead with the plan and make a San Francisco show possible this fall. The entries for the California International Live Stock Show, which opens November 1, demonstrate the desire of the stock interests to see San Francisco, the largest city in the country without a stock show, not want for an attraction of this kind.

Not only have the stock men entered with large numbers of well bred and well fitted animals, but the horse people have responded with plentiful entries, both in the draft horse classes and in the saddle classes for which the honors will be sought in competition during the night horse show.

With the opening day of the show one week away and every foot of space in the big California Building on the Marina converted into stall and pen space, aside from the section in which are the big arena seating 5,000 people and the quarters for dairy and modern barn equipment, the directors are confronted with the emergency of providing stables on the outside of the building for the overflow.

W. T. Sesnon, head of the committee of San Francisco business men who are making the show possible, has assured the stock interests that nothing will be left undone by San Francisco to provide a great show.

"San Francisco knows how," said Sesnon in San Francisco, "and we will put on what will be the biggest 'baby' show ever held in the United States. It required many years to establish the International at Chicago. The country people of the Central West made the show, but Chicago did not realize what was going on within her midst until the last few years, when the business interests of the city began to find out that 'International week' was the liveliest trading week of the year outside of the Christmas shopping season.

"San Francisco is not going to wait until the country tells us that a stock show is a good thing for us. We are going ahead firmly convinced of the fact that the entire Pacific Coast will get behind us and that with the great breeding estates in the West we can support a stock show that will be a real show right from the start.

"We are endeavoring to put on a show that will be educational in all its departments and entertaining for city people who perhaps cannot see the good points of pedigreed live stock. We are trying not to overlook any feature of what is needed to make a show of this kind complete. We have premiums for every class of stock and poultry and a show of the products of live stock, together with the modern appliances that go toward making the handling of stock and the manufacture of animal and poultry products more convenient.

"This will be just the forerunner of other shows, and I am convinced that the generous response we have had from the live stock interests will assure us that each year will find San Francisco eager to receive the blooded animals of the country participating in the friendly rivalry of the show ring that provides the incentive for raising better animals."

Professor Gordon H. True of the animal husbandry division of the University of California, who was granted a leave of absence by the board of regents to manage the show, has done more than any other Westerner to attract the attention of Eastern live stock interests in this state. True has invaded the show ring at the Chicago International on different occasions and carried off the championship honors on animals bred and raised at the university farm at Davis. As the result of True's participation in the Eastern shows a number of breeders are bringing their blooded animals to California for this show.

While the day sessions of the stock show will be given over largely to competing for prizes by the 1,000 or more head of stock and the many hundreds of poultry and rabbit entries, the nights will be devoted to the showing of some of the best horses in the country. Roy M. Pike, chairman of the horse show committee, is now working on the program of horse events so that every high class animal in the West will be able to show off in competition, whether it be in the gaited classes or in novelty events that will display the skill and horsemanship of the rider or driver.

With the entries of such famous horses as Uhlan, the fastest trotting horse in the world, owned by C. K. G. Billings; Friar Rock, the great thoroughbred, and his stablemate, Disguise, the only American bred horse to ever win a Jockey Club stake in England, entered by J. H. Rossiter, the horse show will not be lacking in celebrities of the track and turf.

A score or more live stock and poultry conventions will be held in San Francisco during the show week. The California Cattlemen's Association convention alone will be attended by 1,200 to 1,500 members from all parts of the state. Their sessions will last all day on Wednesday, November 5, and into the mornings of the sixth and seventh, while in the afternoons of those days will be held sales of registered Shorthorn and Hereford beef cattle.

Among the other conventions will be those of the Central California Milk Goat Breeders' Association on November 1, the California Poland-China Breeders' Association, the Western Berkshire Congress and the California

HEREFORDS

OF ROYAL QUALITY

AT PUBLIC SALE

FRIDAY, NOVEMBER 7, 1919 SAN FRANCISCO

Under Auspices of

Pacific Coast Hereford Cattle Breeders Association

J. I. Cazier, Pres., Wells, Nev. J. A. Bunting, Sec'y, Mission San Jose, Cal.

The splendid registered Herefords comprising this offering have been selected from the various leading herds, by committee appointed by the Association, with the object of placing before the public in this sale the highest class representatives of the breed that have yet appeared in a public sale in the west.

CONTRIBUTORS:

CHAS. RULE, Jenner, Calif.
WM. BEMMERLY, Woodland, Calif.
H. M. BARNGROVER, Santa Clara, Calif.
DIABLO STOCK FARM, Danville, Calif.
J. A. BUNTING, Mission San Jose, Calif.
H. H. GABLE, Esparto, Calif.
J. H. CAZIER & SONS CO., Wells, Nev.
HEREFORD CORPORATION OF WYOMING.

The offering includes many individuals that would be an attraction in any public sale anywhere, and buyers will find a very high standard of quality throughout the entire list of entries. Among some of the good ones might be mentioned the herd sire SONOMA, Grand Champion at 1917 Denver Livestock Show; CALIFORNIA PRINCE DONALD, Grand Champion bull at 1918 California State Fair; NEVADA LAD 8TH, first prize senior bull calf 1918 California State Fair; three choice heifers bred to the $10,000 bull BEAU BLANCHARD 76TH; heifers bred to PATRICIAN 5TH; and many others of equal attractiveness.

EVERY ANIMAL SOLD AS A SINGLE LOT GUARANTEED TO BE A BREEDER

EVERY ANIMAL OVER SIX MONTHS OLD TUBERCULIN TESTED

Auctioneer: Earl Gartin, Greensburg, Ind.

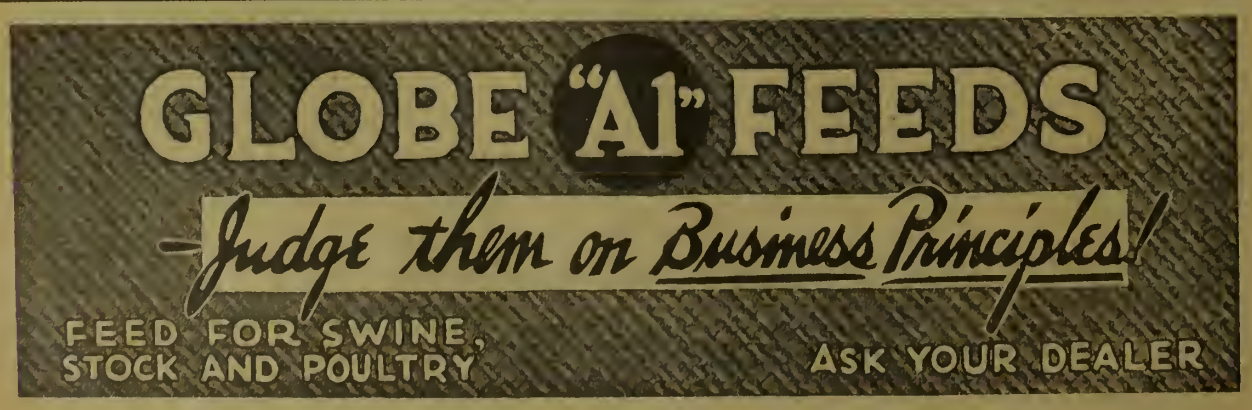
Sales Manager: C. L. Hughes, Sacramento, Cal.



Jersey Cattle Breeders' Association on the third, a convention of delegates from all the pure bred stock associations on the fourth to form a new pure bred organization representing all the breeds, a meeting of the State Agricultural Society on the fifth, banquets by the Pacific Coast Hereford Cattle Breeders' Association and the California Shorthorn Breeders' Association in the evening of the sixth, the convention of the California Sheep and Wool Growers' Association on the seventh, and a gathering of the agricultural committee of the American Bankers' Association on the afternoon of the closing day.

Manager Gordon H. True of the California International Live Stock Show at San Francisco, November 1 to 8, has selected the most capable live stock authorities he could obtain in the United States to judge the classes at the San Francisco show.

In addition to the judges given in the accompanying schedule, Walter Palmer of Ottawa, Illinois, will officiate at the night horse show.

JUDGING OF LIVE STOCK

Saturday, November 1, 9:30 a. m.

Poultry by E. F. Mitchell, Fresno; Nat. E. Luce, Los Angeles.
Pigeons by W. J. Head, Berkeley.
Rabbits by Hale Prather, Ukiah; Louis Regner, San Mateo.
Dressed poultry by J. H. Spelker, Oakland.
Dressed rabbits by J. H. Spelker, Oakland.
Junior feeding classes by Prof. J. I. Thompson, Davis.

Monday, November 3, 9:30 a. m.

Herefords by R. D. Mousel, Cambridge, Nebraska.
Fat steers by Dean C. F. Curtiss, Ames, Iowa.
Holstein-Friesians by Prof. E. W. Major, Los Angeles.
Jerseys by Prof. J. B. Fitch, Manhattan, Kansas.
Mutton breeds by Frank Brown, Carlton, Oregon.
Car lots of sheep by Frank Brown, Carlton, Oregon.
Berkshires by Prof. H. H. Kildee, Ames, Iowa.
Poland Chinas by W. H. Pew, Ravenna, Ohio.
Fat barrows by W. H. Pew, Ravenna, Ohio; Prof. H. H. Kildee, Ames, Iowa.
Milch goats by Prof. E. C. Voorhies, Berkeley.

Tuesday, November 4, 9:30 a. m.

Shorthorns by W. H. Pew, Ravenna, Ohio.
Guernseys by Prof. J. B. Fitch, Manhattan, Kansas.
Fine wool sheep by Charles Cook, Hayward.
Duroc-Jerseys by Prof. H. H. Kildee, Ames, Iowa.
Chester Whites by V. F. Dolcini, Davis.
Percherons by Dean C. F. Curtiss, Ames, Iowa.
Belgians by Dean C. F. Curtiss, Ames, Iowa.

Wednesday, November 5, 9:30 a. m.

Aberdeen-Angus cattle by Alex. McDonald, Davis.
Aryshires by Prof. H. H. Kildee, Ames, Iowa.
Hampshires by W. H. Pew, Ravenna, Ohio.
Yorkshires by W. H. Pew, Ravenna, Ohio.
Tamworths by V. F. Dolcini, Davis.
Shires by Dean C. F. Curtiss, Ames, Iowa.
Dressed carcasses by Frederick Miller, United States meat inspection service, San Francisco; E. E. Nicolls, bureau of markets, San Francisco.

PORK DAY A BIG EVENT

The first Kings County Pork Day held at Hanford, October 15, proved to be one of the biggest successes ever staged in this state and it has been decided to make the event an annual affair. The event was promoted by and held under the auspices of the farm bureau, the local chamber of commerce and the California Marketing Association. Over 2,000 people attended the show and sale.

Seven carloads of finished porkers were entered in competition for the liberal prize money. An evidence of the quality of the hogs is indicated by a statement of one of the buyers that it was the finest lot of hogs he had ever seen put up at auction in his 30 years' experience.

The various lots were judged by Professor J. I. Thompson of the university farm. Following the placings a program was held which included addresses by Professor C. W. Rubel, Roy M. Filcher, F. L. Washburn and John W. Jenkins.

At the close of the program the winning lots were sold at auction. Follow is a list of the awards:

Carload—1, $350, Corcoran center; 2, $280, Hardwick center; 3, $210, Hanford center; 4, $145, Stratford center; 5, $70, Grangeville-Armona center.

Ten hogs—1, $100, Hanford center; 2, $80, Corcoran center; 3, $60, Stratford center; 4, $40, Island center; 5, $20, Grangeville-Armona center.

Single hog—1, $25, William Bernstein; 2, $20, G. I. McCune; 3, $15, Roy D. Filcher; 4, $10, J. W. Creelman; 5, $5, W. D. Trewhitt.

Largest hog—M. Bassett.

Sales of the prize animals were as follows:

Number	Average Weight	Price
70	221	$16.70
70	235	14.65
70	230	14.50
70	241	14.30
70	232	14.05

Other cars entered for prize sold as follows:

Number	Average Weight	Price
70	241	$14.30
70	228	14.20

SERIES OF HEREFORD SALES

The sale of Herefords to be held at the San Francisco Livestock Show, under the auspices of the Pacific Hereford Breeders' Association, will be the first of a series of three sales to be held in San Francisco early in November. The fact that three sales are scheduled indicates the growing popularity of the Whiteface in this state, and these sales are expected to extend the popularity now being accorded the breed.

The first sale, which will be held November 7, has been planned to attract those interested in securing reliable foundation stock. As evidence of the quality of the offering it is only necessary to mention that the following herds have furnished the consignments: Chas. Rule, Jenner; W. M. Bemmerly, Woodland; H. M. Barngrover, San Jose; Diablo Stock Farm, Danville; John A. Bunting, Mission San Jose; H. H. Gable, Esparto; J. H. Cazier & Sons, Wells, Nevada; Hereford Corporation of Wyoming.

The sale will include Sonoma, grand champion bull at Denver in 1917; California Prince Donald, grand champion at the 1918 California state fair; Nevada Lad 8th, first prize senior calf at the 1918 California state fair; three heifers bred to the $10,000 Beau Blanchard 76th, and a number of females in the show herd of the Hereford Corporation of Wyoming.

Following the above sale H. M. Barngrover of San Jose will sell 90 head of pure bred but unregistered cows and heifers, many of them bred to Patrician 5th. This sale will be held at the Western Meat Company's plant in South San Francisco, November 8.

The third sale will consist of 75 head of registered bulls, cows and heifers from the Diablo Stock Farm. This sale will be held November 10.

The three sales will be managed by C. L. Hughes of the California Breeders' Sales & Pedigree Company, Sacramento. Col. Earl Gartin of Indiana will serve as auctioneer in the association sale and Col. Ben. A. Rhoades of Los Angeles, assisted by Col. Bell of Tulare, will sell the second and third sales.

90 Purebred Unregistered

HEREFORDS

at Public Auction

Western Meat Company's Yards

South San Francisco

Saturday, November 8, at 1 p.m.

This is an extra choice lot of Hereford cows, heifers, and bulls, and is a complete dispersal of the unregistered Herefords owned by Mr. H. M. BARNGROVER, Proprietor of VERAMONT STOCK FARM, Taylorsville and Santa Clara, Calif. Mr. Barngrover is selling these cattle to make room for the expansion of his herd of registered Herefords.

There are about 40 splendid breeding cows in the offering, and most of their offspring are by Mr. Barngrover's high class herd sire PATRICIAN 5TH.

This is a rare opportunity for the buyer who wants to put some exceptionally high bred, profitable cattle on his range, and the offering will be made in such a way that the buyer of only a few head will have a chance to buy.

NOTE—There is frequent street car and Southern Pacific train service between San Francisco and South San Francisco, and good roads all the way for parties traveling by auto. Mr. Barngrover may be seen personally at the San Francisco Livestock Show where he will exhibit Herefords.

For further information communicate with owner or sales manager.

Roselawn Shorthorns Average $608

One of the most satisfactory sales of beef cattle ever held in the West occurred at Woodland, Thursday, October 16, when H. M. Elberg, proprietor of the well known Roselawn herd of Shorthorns, sold 44 head, 36 females and seven bulls, for a total of $26.175, an average of $608.75.

The sale offered fine proof that California cattlemen are willing to pay for quality when it is offered, and was a splendid tribute to the high regard in which the Roselawn herd is held.

The setting for the sale was ideal. Perfect weather combined with perfect arrangements and a class of cattle of proven worth, presented in rare condition, were the contributing factors for this great sale.

The top price of the offering was scored by the late junior yearling, Rosie Mayflower, daughter of Sultan Mayflower, the bull at the head of the university herd. She is easily one of the top Shorthorn females to sell in the West and at $2,200 became the property of the Conaway Ranch, Woodland, C. Harold Hopkins, manager, making the last bid over a field of the leading breeders in California. Mischief E. 3d, grand champion at the 1918 state fair and dam of Roselawn Champion, junior champion at the same show, was added to the Caledonia Farms' herd by Edward Cebrian, at $1,550. Lovely's Pride, a good Scotch cow, sold, with a heifer calf at foot, to the Fair Oaks Ranch, Willits, for $1,150 and her two year old daughter, Lovely's Pride 3d, was taken by Caledonia Farms at the same price.

O. L. Raper of Glenn, who has recently purchased the entire herd of Shorthorns owned by Chas. Silva, Sacramento, was the successful bidder on the three year old bull, Crescent Dale, making him bring $2.000. George E. Dierrsen, who is establishing a herd near Sacramento, was the runner up. Crescent Dale is one of the good bulls of the West.

One of the heaviest buyers was the Edinger-Johnston Company of Hood. This firm is just entering the Shorthorn ranks and it is their intention to own one of the top herds of the state. They secured seven lots.

G. J. Meister, North Sacramento, also entered the Shorthorn business at this sale. Meister selected two good bargains.

The sale was held under the management of the California Breeders Sales and Pedigree Company, Sacramento. Col. Ben A. Rhoades of Los Angeles officiated in the box in an outstanding manner and Col. Harry Crancke of Nez Perce, Idaho, worked the ringside very effectively.

FEMALES

2. Mischief E 3d, Sept., 1910; Edward Cebrian, San Francisco, $1,550.
3. Rosie Mayflower, June, 1918; Conaway Ranch, Woodland, $2,200.

45. Clara's Dale, Nov., 1918; J. S. Stephens, Woodland, $400.
46. Fancy Dale, Jan., 1919; Ratto Stock Farm, $400.
47. Scottish Dale, Jan., 1919; J. F Dunne, $400.

* * *

Notes on the Roselawn Sale

The sale was a notable success in every way, but particularly for the reason that it served to start at least two new breeders, the Edinger-Jonnston Company of Hood and G. J. Meister of North Sacramento making their initial purchases of females.

Edward Cebrian, manager of the Caledonia Farms, West Sacramento, has a keen eye for the best and usually gets what he sets out after. His selections at the Roselawn sale were especially attractive. The aged cow Mischief E. 3d is a proven producer and her general quality throughout makes her a strong addition to any herd.

W. S. Guilford of the Butte City Ranch was determined to have some of the good ones and was a liberal bidder on the better things. Guilford made a particularly good buy when he secured the December bull calf Crescent Gloster. This youngster is a snappy, straight-lined fellow out of a Duchess of Gloster dam and sired by Crescent Dale. Guilford plans to develop him for one of the herd bulls to be used in the Butte City herd. Guilford also selected several desirable females.

Frank Brown, Carleton, Oregon, western field man for the American Shorthorn Breeders' Association, attended the sale and assisted a number of buyers in making their selections. Brown will judge Shorthorns at the Los Angeles Livestock Show.

B. O. Cowan, formerly assistant secretary of the American Shorthorn Breeders' Association, and one of the best posted men in America on Shorthorn history, was on hand and declared that he did not remember a sale where the quality of the offering was so uniform throughout as he found at Roselawn. Cowan made a very interesting talk at the opening of the sale and recounted many facts in regard to the early development of the breed in this state.

George E. Dierssen of Sacramento, who made his initial purchases at the Carruthers sale, last July, added three good females to his herd and was a strong contender for the top bull, Crescent Dale.

J. F. Dunne of Gilroy, who is one of the large cattle operators of that section, secured a number of the females and was the heaviest buyer of bulls, taking three head of young bulls.

Professor J. I. Thompson of the University Farm, made a good selection in the junior yearling heifer, Roselawn Princess, a daughter of Ringleader.

Wm. Bond of Newark was there to see that no one "stole" the cattle and made several additions to his herd. Bond got a bargain in the February heifer calf, Maid of Roselawn.

Wm. Carruthers was after the good Scotch things and was the runner up on all of the tops. Carruthers knows 'em as well as any and his bidding is a good guide to those not so familiar with the best.

R. H. Parsons, who maintains a good herd near Hilt, California, selected three of the top females at bargain prices.

T. S. Glide of Davis, one of the pioneer Shorthorn breeders of the West and proprietor of the Hillcrest herd, only got one cow but he was after a number of the tops.

Much credit for the success of the sale is due Messrs. Johnson, Snow and Dunlap who had charge of the fitting of the sale offering. No sale has exposed a better conditioned lot of cattle. Each of the above men is a master of the art of fitting.

Apiarists in canyons of foothills or mountains in the fire swept area are planning to move their colonies to higher ground in time to avoid danger of winter floods.

A rancher who has a few colonies of bees has sown his ditch banks with white clover to provide honey making material.

SANTA ANITA RANCHO

Anoakia Breeding Farm

Arabian-Thoroughbreds

Out of our choicest thoroughbred mares and sired by our famous imported stallion Ibn Mahruss we are offering some splendid two year olds. Live Stock News Notes

SALE CALENDAR

Hereford Cattle

November 7. Third annual sale Pacific Coast Hereford Breeders' Association, San Francisco.

Geo. A. Stengle of Lark Meadow Ranch, San Gabriel, writes: "Advertising brings results if you just keep pecking away at it. At the rate we are going we will soon be cleaned out of Berkshires. Recent sales include the following: W. C. Gathright, Fillmore, one bred gilt and a hoar; J. M. Alfter, San Gabriel, gilt; N. H. Stayer, Strathmore, hoar; Mrs. Maud Minehan, San Gabriel, bred gilt; C. N. Esender, Moapa, Nevada, two bred gilts and three open gilts; Joe Hoegel, San Gabriel, bred gilt; J. J. Phillips, Los Angeles, gilt; Laura McCann Bennett, Escondido, bred gilt; Abran Marron, Jr., Oceanside, hoar; Ben Russell, Whittier, boar; Kenneth Douglas, El Monte, gilt."

John A. Bunting, owner of the Mission Hereford herd, Mission San Jose, has sold to E. C. Apperson of Sunol a young bull calf sired by New Era 2d and out of Pearl Ranier, one of the good producing cows in the Bunting herd. So well pleased was Mr. Apperson with the Mission herd that he has placed an order for at least one of the top bull calves produced each year. The price paid for the above calf was $500.

Following the sale of Herefords to be held at San Francisco, November 7, C. L. Hughes of the California Breeders' Sales and Pedigree Company will sell at South San Francisco 100 head pure bred unregistered Hereford cows and heifers for H. M. Barngrover of San Jose. The sale, the first of the kind in this state, will be held at the yards of the Western Meat Company.

W. L. Haag & Son, Hanford, have recently sold to Edgar Ramsey, Donald Pickrell, Roy Kuns and Nevin Burrell Poland-China sows by Young Jumbo and bred to their young sire Lendorris Liberty Bond. Messrs. Haag state the demand for sows and gilts bred to Lendorris Liberty Bond is greater than they are able to supply.

A. Buckland & Son, Poland-China breeders of Fresno, report the sale of the hoar Buster The Great of California Buster to A. Whitmore, Hanford, and Giant Ben, a line bred Big Ben hoar, to Fred Wheaton, Helm.

E. R. Stalder, the Holstein specialist at Nuevo, showed a fine string of young cattle at Riverside. These are largely the get of the former herd bull Prince Lil Walker, a son of Prince Gelsche Walker, and out of a 24 pound cow. In a class of 12 entries the Stalder heifer Aralia Rowena Princess stepped into second place. Rosamaine's Pontiac Ormsby, in junior yearling bull class, was awarded first place. His sire is Sir Skylark Ormsby Hengerveld, and his dam is a 23 pound three year old. Mr. Stalder now has 18 cows bred, and he will begin test work again at an early date.

Geo. W. Thomas & Sons of Arlington Station, Riverside, are well launched in the breeding of high class Jerseys. Their fine bull Walnut Park Noble 142138 had the distinction of winning grand championship honors at the Riverside fair. The dam of this bull made a record of 605 pounds butter fat and 14,000 pounds of milk. His heifers are developing some excellent prospects. At head of a flock of grade Shropshire sheep is the champion ram U. C. 530. Mr. Thomas was superintendent of cattle at Riverside.

Dr. E. Avery Newton, offices 1026 Marsh-Strong Building, Los Angeles, has developed a fine hog breeding establishment at his ranch near Lankershim. A distinctive feature is that seen in the splendid housing and feeding facilities for the young and growing pigs. The herd boar in the Duroc section is Orion King of Ireland, he by Orion Cherry King 5th, his dam being the noted brood sow Cardinal Lady C.

Mossdale Farm

JERSEY CATTLE **DUROC-JERSEY SWINE**

We believe that the test of a sire lies in his ability to sire uniform, prize winning offspring, and we are proud of the record of Mossdale sires.

Jerseys---

Our herd bull, JOLLY SENATOR RALEIGH, was never defeated in class as a yearling or as a two-year-old and this year he was grand champion, as a three-year-old, at the California State Fair, the Kings County Fair and the Fresno Fair. And at each of those shows his get won the get of sire class.

Duroc-Jerseys---

The record of Mossdale Durocs at recent fairs is proof of their merit. Freddy You'll Do, our herd boar, sired the winning get of sire group at the above fairs.

We can furnish young things of either breed at prices that are attractive. Write us your wants.

See Mossdale Exhibits at Los Angeles and San Francisco

Is a Calf Worth 23 Cents?

For 23 cents you can insure your calves against death from Blackleg by having them vaccinated with PURITY BLACKLEG AGGRESSIN. (The Kansas Germ Free Blackleg Vaccine.) One treatment immunizes for life and there is no danger in introducing Blackleg into healthy herds of cattle. We also manufacture and sell PURITY ANTI-HOG CHOLERA SERUM, PURITY MIXED VACCINE for swine, and PURITY HEMORRAGHIC SEPTICEMIA VACCINES for cattle and sheep. Stop your losses and increase your profits—It's good business. For service that counts, and does not end by selling, write, wire or phone

PURITY SERUM CO., J. L. Thatcher, Manager (Successor to Thatcher Serum Co.)
Riverside, Calif. Sacramento, Calif.

dino, had an extensive display from his well known breeding establishment at Riverside fair. The three dominant strains in the Peake herd are Blue Valley, I. B. A. Wonder, and Superba. H. B.'s Superior Giant is the crack young big type boar now in service. He traces through old Superba to many of the most notable big type hogs of Iowa and Nebraska, and he is a good 1,000 pound prospect as a two year old. Peake is the man who believes the big type Poland-China hog is "the hog,' and the fine lineup of pigs to be seen at the ranch is his best argument every day in the year. Some of the best ribbons at Riverside went to this herd.

California, prestige in live stock circles was greatly enhanced at the National Dairy Show held in Chicago October 6-11, by the winnings of Edgemoor Farm, Santee, owned by Mr. Dupee. Included in the winnings were: 1, 2, 4, and 5 on aged cow; 2 and 3 on three-year-old cow; 2 on 2-year-old cow; 1 on senior yearling heifer; 1 on junior yearling heifer; 2 and 3 on senior heifer calf; 1 and 2 on junior heifer calf; 1 on aged herd; 2 on breeders young herd; 1 on calf herd; 1 and 3 on get of sire; 2 on produce of dam; 1 and 3 on senior A. R. cow; 1 on junior A. R. cow, and the Frank S. Peer trophy for get of sire.

The Conway Ranch, Woodland, is establishing a very high class flock of Hampshire sheep. This ranch, which is under the management of C. Harold Hopkins, is designed to occupy a large place in the live stock affairs of the west. Foundations have been started for top herds of Shorthorn cattle and Berkshire hogs.

Edward Cebrian, proprietor of the Caledonia Farms, West Sacramento, finds that it will be impossible to exhibit Shorthorns at the Los Angeles Live Stock Show owing to the shortage of help. Mr. Cebrian had expected to show his great two year old bull, Gainford Matchless, and Shorthorn interests were looking forward to seeing this bull in the show ring. Cebrian expects to show at San Francisco and will also make a notable consignment to the sale to be held under auspices of the California Shorthorn Breeders Association. In the consignment will be a number of very choice females bred to Caledonia, the celebrated imported bull recently put at the head of the Cebrian herd. This will afford the first opportunity California breeders will have to secure the blood of this bull that is certain to have a wide influence on the breed in the West.

John A. Bunting, secretary of the Pacific Coast Hereford Breeders Association, reports that the Hereford Corporation of Wyoming, Cheyenne, Wyoming, has taken out membership in the association and will contribute a few high class females to the sale to be held at San Francisco during the live stock show. The Hereford Corporation of Wyoming has one of the largest herds of registered Herefords in the world. Last year this firm sent a show herd to the Los Angeles Liberty Fair and they found the field so inviting that they are returning this year and their cattle will be seen at the Los Angeles and San Francisco shows. The sale which will be held under the auspices of the association will include 30 head of very high class females and five bulls, among which will be the well known bull, Sonoma, from the herd of Chas. Rule, Jenner. Sonoma was sired by Beau Perfection IX, a full brother to the famous Woodford. The sale will be managed by C. L. Hughes, of the California Breeders Sales and Pedigree Co., Sacramento.

Harvey M. Berglund, Dixon, reports the following sales from his Duroc-Jersey herd:

To A. Bloom, Dixon, two bred gilts and a boar; to Dr. O. A. Hoffman, Walnut Grove, a boar; to J. H. Veteran, Walnut Grove, a gilt; to E. Rohwer, Dixon, a boar; to W .C. Scott, Winters, a boar; to Chas. E. Greens, Woodland, a boar; to Captain C. V. Biggs, Dixon, a bred gilt. Mr. Berglund expects to show at the San Francisco show.

Mrs. Viola L. Renwick, Santa Barbara, reports the recent purchase of a fall yearling daughter of the noted Big Bob from the Bennett Bros. herd in Missouri. This sow is to be bred to Liberty Bond for March litter. Another recent purchase is that of a second yearling daughter of Big Bob with six fine pigs at side by Buster's Model. These are excellent accessions to one of the meritorious herds of Poland Chinas of the south end of the state.

Leest & Mounier, Van Nuys, have sold to W. V. Mong of Whittier an April Duroc gilt for $200. She is a daughter of the Liberty Fair junior champion boar, Orion's King Gano, owned by Donald H. Graham.

B. H. Wilkinson of Falfadale Farms, Perris, sold during the Riverside fair for $300 the fine two year old sow, Amazetta Again, bred to Winsor's Giant Orion. A second sale was that of a daughter of Winsor's Giant Orion to George Junior Republic, bred to Great Orion Sensation Jr.

M. Bassett has bought for his big Poland China breeding establishment at Hanford a select young big type boar sired by the noted boar Big Sensation, whose official weight is 1,204 pounds in show form. The pig is out of a 1,000 pound dam. He comes from the Erhart herd in Missouri.

S. M. Padias is a new breeder of Durocs at Tustin, Orange County. A recently purchased foundation sow is a daughter of Iowa's Best, the well known big boar owned by W. J. Stewart at Tulare.

— Third Sale of Shorthorns —

Under auspices of California Shorthorn Breeders' Association will be held on

Thursday, November 6th, 1919
at 1:30 P. M. Sharp

at California Building, Exposition Grounds
SAN FRANCISCO

In conjunction with the San Francisco Live Stock Show, Nov. 1st to 8th, 1919

30 Head of Cows and Heifers 10 Head Bulls

The entries to this sale have been selected both from the standpoint of individuality and breeding, and represent unquestionably the greatest lot of Shorthorns ever offered at public sale in California.

The offering comes from the herds of the following well known breeders:

ORMONDALE COMPANY, Redwood City, Calif.
CALEDONIA FARMS, West Sacramento, Calif.
(Edward Cebrian)
ESTATE OF T. B. DIBBLEE, Santa Barbara, Calif.
(San Julian Ranch)
PACHECO CATTLE COMPANY, Hollister, Calif.
T. T. MILLER, Hollister, Calif.

Auctioneer: Earl Gartin, Greensburg, Indiana

Hanford Polands Average $114

The joint sale of Poland-Chinas held at Hanford, Saturday, October 18, by Messrs. Trewhitt, Vaughn and Nehls resulted in a very satisfactory average of $114 on 67 head of bred and open gilts and boars. In view of the fact that this was the fourth sale to be held at Hanford during the past six weeks, the above average indicates the strong and sustained demand that exists for pure bred Polands. A few days before the sale the Kings County Pork Day served to demonstrate the value of better blood in the production of market pork and the lesson of the show was reflected in the general average.

The top of the sale was the good yearling gilt, Miss Orphan 2d, sired by Orphan Bob and out of a Big Bob Wonder dam. She was consigned by C. A. Vaughan and was purchased by Wm. Bernstein of Hanford at $450.

A feature of the sale was the patronage of a number of pig club boys who were in the market for bred gilts. These youngsters held their own with the more experienced bidders.

The offering was presented in nice breeding condition.

Col. Geo. W. Bell of Tulare was on the block and Col. Clark of Modesto and Fred Gatewood of Fresno assisted in the ring.

A list of representative sales follows:

W. D. Trewhitt Consignment

1. J. M. Bernstein, Hanford, $110.
2. J. W. Jenkins, Hanford, $85.
3. Teddy Nelson, Kingsburg, $85.

68. Geo. E. Dierssen, Sacramento, $200.
69. A. J. VanCleef, Riverdale, $145.
70. Wm. Bernstein, Hanford, $150.
71. W. C. Ficklin, Fresno, $90.
73. W. C. Ficklin, Fresno, $40.

GREAT BULL CALF SOLD

A three months' old Holstein bull calf of outstanding breeding was recently sold by Gotshall & Magruder,

Karlray Pontiac Tola

Ripon, to A. B. Spooner, San Luis Obispo. This youngster, Karlray Pontiac Tola, is out of K. P. Tola Joe, whose record as a senior two-year-old has never been exceeded in California, and is sired by King Korndyke Pontiac 30th, the $6,500 son of Miss Valley Mead De Kol Walter.

It had been the intention of Gotshall & Magruder to retain the calf as a herd sire but they were finally persuaded to price him, and although the price named by them has never been exceeded on a bull calf at a private sale in California, Mr. Spooner lost no time in accepting it, realizing that he had secured a rare bargain. San Luis Obispo County may well be proud of the acquisition of this royally bred bull by one of her breeders.

LIVE STOCK LOSSES IN WAR COUNTRIES

Cattle, sheep and swine in nine countries of western Europe have decreased but have increased in other countries, including the United States, so that the present situation with respect to numbers is very much the same as before the war.

American exportations of meats and meat products may reach the prewar level before the herds and flocks of Europe have been increased to prewar numbers.

WORTH TRYING

There's no telling what a little kindness will do. Assumed superiority is no guarantee of greatness. The really big soul can afford to be kind and gentle. As the gentle rootlets move stones and split rocks, so gentle characters accomplish things undreamed of by rougher characters. This does not prohibit the use of firmness when necessary. But even that may be applied with such gentleness that it will get results without offending. This is beyond the reach of some men.—Exchange.

FIRST

California International

LIVE STOCK SHOW

California Building

San Francisco November 1-8

—Largest Exclusive Stock Show in the West—

YOU WILL SEE

The most complete exhibition of the live stock resources of the Pacific Coast ever assembled. The Cream of every improved breed of horses, cattle, sheep and swine and goats will be entered. Every allied industry will be represented.

The Dairy Division, with its world famous cattle and its exhibits of Dairy Products, makes this the "National Dairy Show of the West."

The most complete Poultry and Rabbit Show ever presented on the Pacific Coast will show the best that is offered from the most progressive breeders.

YOU WILL LEARN

Why and how the best are produced in this State and who owns them. You will learn to recognize the modern type and how better breeding stock can increase your profits.

YOU SHOULD COME

It is your show. It has much to offer and you will be welcome.

Horse Show - Music - Parades Each Night

World's famous horses will be exhibited in competition in the greatest night horse show ever staged in the West, furnishing educational amusement features that will be made into a different program for each night.

Let Shorthorns Pay Your Mortgage

If you are a business farmer, the chances are you have a mortgage. Why not put in a few registered Shorthorns and let them accumulate? Then when your mortgage is due, if you find it necessary, sell enough of them to pay it off. There is no easier way to get out of debt. Shorthorns have paid off many hundreds of mortgages.

Best Stock Exhibit (best live stock exhibit from one farm, not less than 4 varieties of animals)—F. L. Hall.

Veterinary

Answers in this column by Dr. Wm. Petrie, 2714 South Harvard Boulevard, Los Angeles, are without charge. For immediate mail answer remit $1.00. In writing questions give full symptoms or particulars of injury of animal.

Unsigned communications receive no attention.

Worms in Horses

Please advise me through the Cultivator what to do for worms in horses. I have a mare and six months old colt that are infested with them. Have tried powders from the drug store, but without success.—Subscriber, Sisquoc.

There are a great many remedies for worms in horses but about the best you can get is to mix one part of wood ashes with two parts of common salt and give a tablespoon of the mixture in the feed morning and evening.

Enlarged Glands

Can you tell me what is wrong with a year old heifer that has the following symptoms? About three months ago a growth started on each side of her neck low down near the base. It has no core and does not seem to be from a bruise; resembles goiter more than anything else. It does not interfere with her breathing and does not seem to be sore, but the last week it has increased alarmingly. It seems to be an enlargement of the side muscles of her neck. She eats well and apparently feels well, but has a bloated appearance and stands with a hump in her back. Any information on the subject will be appreciated.—Subscriber, Roosevelt.

Located about where you describe the enlargements to be are some glands that the butchers call "sweet breads" in veal, but what their office is no one has found out. They disappear as the animal grows older. These glands may have become tubercular or become infiltrated with melanosis; which is the coloring matter of the hair. Either of these affections are known but are very uncommon. You see it is a matter of guessing when one can not see the case. You might try giving iodide of potash, two ounces dissolved in a pint of water and a tablespoon given once a day in the drinking water.

Inflating Udder for Congestion

Would you advise pumping air into the cow's udder that has a congested quarter that is not in any way related to milk fever?—Subscriber, Roosevelt.

No. Do not do it. Air should only be used in cases of milk fever and then you should be very careful to sterilize it. Any dust or foul odors carried in with the air are likely to do more harm than the air can do good. For congested udder give plenty of salts to cool out the system and rub the udder and milk it out clean as often as you can.

A Mileage Harvest

JUDGE tires by results. On the strictest basis of mileage measurement, the Ajax Road King tops the field.

Chief among reasons for the greater mileage yield of the Ajax Road King is that special feature—Ajax Shoulders of Strength. Shoulders of Strength are burly buttresses of rubber that brace and reinforce the tread. Their function is to add mileage—and they do, for they distribute wear evenly over the road. They put more rubber where it should be—more tread on the road.

The harvest tells. Try Ajax Road King tires. They are typical of the better inbuilt value that makes Ajax mileage yield so great.

Ajax Tires Are Guaranteed In Writing 5000 Miles

POULTRY IN CITRUS ORCHARDS

Continued from Page 541

as the compacting of the soil about the trees and damage to the lower foliage. Moreover, confinement to pens with cement floors would obviate the necessity of having well drained sandy soils for the location of the poultry yards, a necessity learned in past experience in Southern California.

Instead of hatching chicks or buying them, on a ten acre unit with only half a man's time, it would probably be best to purchase annually 500 pullets per ten acre block, culling down the flock to the required number and selling off those culled out.

In the case of larger acreages where several one man units are installed the possibility exists that it might be found advisable to raise some one of the larger general utility breeds rather than strains for egg purposes alone, hatching or buying chicks and selling broilers and fryers. Los Angeles should furnish a most excellent market for such fowls as well as for capons, which in many places have become a profitable side line for the man who is willing to go after a select trade.

The writer realizes as well as anyone that there are certain prejudices and difficulties to be overcome in making the combination of poultry with citrus orcharding above suggested. Nevertheless, it is felt that the drawbacks to such a combination are of more or less minor importance as compared to the magnitude of the problem confronting citrus growers, and such as can readily be obviated. The problem of maintaining the fertility of our orchard soils is a serious one at present and destined to become increasingly difficult. The suggestion made has been given in the hope that it may prove at least a partial solution of this problem.

Poultry Queries

Conducted by J. A. Koethen

Feed for Two Months Chicks

Could you publish a feeding formula for chicks two months old? I have fed Egyptian corn and some blood meal but I think this is not what they want; they look for something else.—Subscriber, Ripon.

At the Davis farm chicks two months old have before them at all times a dry mash consisting of two parts bran, two parts shorts, one part corn meal or barley meal, two parts beef scrap, one part bone meal and three parts charcoal by weight. Any good grain mixture may be used with this for scratch feed. Probably the best would be whole wheat and cracked corn with sprouted oats at noon. Either milo or Egyptian corn may be substituted for Indian corn, or may be used exclusively if a good balanced mash is fed. If the mash is moistened once a day with sour milk more rapid growth will result. At the Iowa station after the eighth week chicks receive a mash consisting of three parts corn meal, two parts shorts, one part bran, one part beef scrap, one part ground oats, one part ground bone. The scratch feed consists of two parts cracked corn, one part wheat, one part oats. Oats here in California are so light that they are best sprouted or ground.

SUGGESTIONS TO THE RABBIT RAISER

A rabbitry should be built to allow the entrance of plenty of sunlight and provision made for an abundance of ventilation in such a way as to prevent a direct draft on the animals. Hutches should be airy and crowding of animals avoided. If possible, windows should be screened to exclude flies in summer.

The droppings of rabbits are normally round. Should they become soft and adhere, forming a mass, the animal is probably getting too much green or other loosening food and the diet should be corrected. Rabbits two months old or older, kept in capacious runs, may be fed green food almost exclusively during the summer without exhibiting such an abnormal condition. Rabbits, particularly adults, should not be overfed. Stock which is always a little hungry is in better shape physically than overfed animals. Nursing does, however, should receive an abundance of milk producing food. Avoid any sudden or radical change of food such as a transfer from hay and grain to a diet of green food. Such changes should be gradual. The same recommendation applies to sudden changes of temperature. It would be dangerous in a cold climate to transfer in winter, an animal from a heated room to an outside hutch or room, and the opposite change from cold to warm might also causes ill effects. Individuals, however, differ in susceptibility.

While rabbits respond to intelligent care, the raiser should not coddle his stock. The keeper of hares will be frequently surprised at the result attained by turning a sick rabbit out on grass where plenty of fresh air, sunshine and exercise are available. Many an animal affected with snuffles or other ailment apparently recovers entirely under conditions approaching approximately those of the life of the wild rabbit.

A rabbit raiser should purchase a good manual on rabbit culture and should subscribe to a periodical containing new matter on the subject.

Sudden noises or motions alarm rabbits. Since their well being depends on an undisturbed condition of life, do not enter the rabbitry noisily or allow others to do so.

Prevent young rabbits from stepping into their water dishes, and always provide shelter from rain.

Frequent and gentle handling of youngsters does away with their natural timidity.

These conditions should be constantly in mind: dry, clean, airy hutches or pens; good ventilation; sunshine where possible; no direct drafts on the animals.

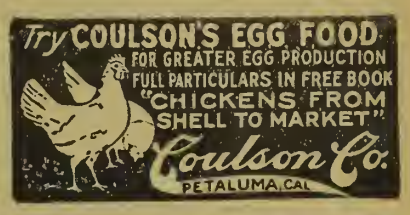
Rev. U. Okumura, a prominent Japanese clergyman, speaking at Honolulu recently said that in 14 years the Japanese would control the Hawaiian Islands.

For Sick Chickens

Preventive and curative of colds, roup, canker, swelled head, sore head, chicken pox, limber neck, sour crop, cholera, bowel trouble, etc. Mrs. T. A. Morley of Galien, Mich., says: "Have used Germozone 17 yrs. for chickens and could not get along without it." Geo. F. Vickerman, Rockdale, N. Y., says: "Have used Germozone 12 years; the best for bowel troubles I ever found." Frank Sinks, Chicago, Ill., writes: "I have lost but 1 pigeon and no chickens in the 3 yrs. I have been using Germozone." C. O. Petrain, Moline, Ill.: "I never had a sick chick all last season." Bernard Horning, Kirksville, Mo., says: "Cured my purest chicks this spring." Ralph Wurst, Erie, Pa., says: "Not a case of white diarrhoea in 3 yrs. I raise over a thousand a year." Good also for rabbits, birds, pet stock.

GERMOZONE is sold generally at drug and seed stores. Don't risk a substitute. We mail from Omaha postpaid in new 25c, 75c and $1.50 sizes. Poultry books free.

GEO. H. LEE CO., Dept. 418 OMAHA, NEB.



"I was away for several days-and found, on my return that the machines were regulated within a fraction of a degree"

—says P. R. Lyding, of Sebastopol—a poultry raiser with 26 years' experience. The machines that kept temperature so remarkably were equipped with Charters' Regulators. And the Charters' Regulator is an important—but not the only feature of

CHARTERS INCUBATOR

The incubator is of particularly substantial build—540 egg capacity—a special ventilation and moisture retention system—hollow cylinder boiler that gives the greatest heating surface, insuring active circulation in the coils. The boiler has removable bottom—which allows easy cleaning. Every detail of construction has been made as nearly as possible perfect. And to add to this—the Charters' Incubator has the Charters' Regulator built in—the only incubator so equipped in its manufacture.

With reference to the Regulator—It's the two thermostats that do the trick, one outside and one in the egg chamber: by actually anticipating any change of temperature—and automatically adjusting the flame to meet the new conditions. The temperature outside may vary as much as 70 degrees, without producing as much as half a degree of change in the egg chamber. Charters' Regulator is entirely unlike the "sleeve" type—which has proven unsuccessful.

And the big tank—holds a supply of fuel that will run the lamp from two to three weeks without refilling. That means one refilling and trimming only each week.

H. L. Brown of Ceres, Cal.—G. L. Hawley of Madera, Cal.—Enoch Crews of Seabright—are among the users of Charters' Incubator—and these and many others report enthusiastically on the satisfaction they give.

It has done wonders in the saving of time, money and worry for others—it will do the same for you. If it does not—your money back. That's fair enough—isn't it?

Write today for our catalog—or better still send in your order now—for a Regulator, or the fully equipped Incubator—so we can deliver in time for your fall hatch. The Incubator, equipped with Regulator is $65. The Regulator is $10.

See The Charters at principal fairs and poultry shows this year.

CHARTERS MANUFACTURING CO.

RU-BER-OID
and
MALTHOID
READY ROOFINGS

Built-in Quality

The only way to know the quality of ready roofing is to put it on your house, barn, or other building and wait for two or three years. You can't tell the good from the poor merely by looking at it or feeling of it. It is the hidden qualities that count. Ready roofing must be carefully made from the best materials if it is to stand the test of time and weather.

Ru-ber-oid and Malthoid have attained their position as the standards of ready roofing because quality has been built into them. With our complete organization, we scour the world for the best materials. We make our own felt from carefully selected rags. We maintain our own refineries in order to get the highest grade of asphalt and similar products. The manufacture of Ru-ber-oid and Malthoid is carried on from beginning to end within the one organization.

No effort or cost is spared in manufacturing Ru-ber-oid and Malthoid. Experts constantly supervise every process. Tests are made continually to see that all material is kept up to the high standard which has been set.

As a result, Ru-ber-oid and Malthoid have those hidden qualities which give them an exceptionally long life. They will not dry out or rot. They are the best quality roofings that can be made. If painted regularly, they will last for years.

When you think of building, remember Ru-ber-oid and Malthoid.

Wanted---Better Sires

By Jean A. Koethen.

BEGINNING the first of October the department of agriculture is organizing a drive for better sires for all kinds of live stock and poultry. Just what is to be included in the drive I have not learned, but the movement is a timely one, and for two reasons: First, because improvement is needed, and not only needed but demanded by the times in which we live; second, because the cheapest and quickest way of improving stock is through the use of pure bred sires.

No argument is required to prove that, in spite of all our boasted advancement in poultry methods during the last 20 years, we are still a long way behind the ideal in egg production. When the Missouri station admits that its average production is only 130 eggs and no station claims an average of over 150, so far as I know, while the average of farm flocks is undoubtedly far below this mark, it is high time to seriously consider how the average is to be raised. Culling out the poor layers is a great factor in the maintenance of higher averages, but we must do more—we must increase the average of the best.

Nor is improvement in egg production sufficient. We want more eggs, but we also want more meat. We want more birds of the strictly meat type, and we want more chicks with strength enough to live in spite of the odds against them, chicks whose lives are not snuffed out by the first breath of air. We want hens that do not develop roup with the first rain in the fall, and pullets that will fight for their living against any comer. Last, but not least, we want better looking flocks—flocks that any man or woman can be proud of. What is the solution of all these wants? Better sires.

Principles of Inheritance

Professor Pearl of the Maine station, after making a careful study of the Mendelian principles, correlated them with the results of years of observation and investigation at the station and laid down these three principles for the inheritance of fecundity:

High fecundity may be inherited by daughters from their sires, independent of the dam. This is proved by the numerous cases where the same proportion of daughters of high fecundity are produced by the same sire whether he is mated with dams of low or high fecundity.

High fecundity is not inherited by daughters from their dams. This is proved by a number of distinct and independent lines of evidence, of which the most important are: Continued selection of highly fecund dams does not alter in any way the mean egg production of the daughters; the proportion of highly fecund daughters is the same whether the dam is of high or low fecundity, provided both are mated to the same male; the daughters of a highly fecund dam may show either high fecundity or low fecundity, depending upon their sire; the proportion of daughters of low fecundity is the same whether the dam is of high or low fecundity, provided both are mated to the same male.

A low degree of fecundity may be inherited by the daughters from either sire or dam, or both.

Professor Pearl came to these conclusions after seven or eight years of breeding from high producing females without raising the average of production in the flock. In short, as long as he considered only the mothers, he got nowhere at all; it was only when a male was used that was of a high producing strain that production was improved.

Long before any one discovered that fecundity was a sex-limited character (i. e., transmitted through the male), poultrymen had known that color and to some extent size come from the male. Mate a pure-bred Barred Rock male to a lot of mongrel hens, and you will find a large proportion of the progeny more or less like the sire in appearance. It was by following this principle of breeding that the farmers of Rhode Island 50 years ago built up one of the most prolific and vigorous of breeds. Sea captains from New England ports as they returned after long voyages brought back red roosters, mostly of what was known as the Red Malay variety. These roosters were eagerly purchased by the farmers and mated to their mongrel flocks, which gradually took on a brighter hue, till, lo and behold, in time they were all Reds. This is just a concrete example of what may be done by persistently using pure bred males. I suppose any farmer in California, no matter how mixed and disreputable his flock, might in time make it for all practical purposes pure bred by using year after year the best male he could afford, of whatever breed he preferred.

The First Step

A word of warning may be necessary at this point. Let no one think that because he has improved his flock somewhat by the use of a pure bred male or even of a male of high producing pedigree, he has gotten hold of even the fringe of a system of breeding. To quote again from Professor Pearl:

"'Selection' to the breeder means really a sytem of breeding. 'Like produces like' and 'Breed the best to get the best'—these epitomize the selection doctrine of breeding. It is the simplest system conceivable, but its success as a system depends upon the

KRESKY BROODER STOVE CO.
Petaluma Cal.

existence of an equal simplicity in the phenomena of inheritance. If the mating of two animals somatically a little larger than the average always got offspring somatically a little larger than the average, breeding would certainly offer the royal road to riches. But if, as a matter of fact, as in the present case, a character is not inherited in accordance with this beautifully simple scheme, but instead is inherited in accordance with an absolutely different plan, which is of such a nature that the application of the simple selection system of breeding could not possibly have any direct effect, it would seem idle to continue to insist that the prolonged application of that system is bound to result in improvement.

"It seems to me that it must be recognized frankly that whether or not continued selection of somatic variations can be expected to produce an effect on the race depends entirely on the mode of inheritance of the character selected. In other words, any systematic plan for the improvement of the race by breeding must be based and operated on a knowledge of the gametic condition and behavior of the character in which improvement is sought."

In other words, while the use of a better sire will no doubt greatly improve the character of the flock, it will not develop a high laying strain or an exhibition strain. Anything worth while in breeding must be sought by the most careful work with individuals. The result of every mating must be recorded. Suppose, for instance, a pure-bred male, A, is mated to five females, B, C, D, E and F. B may never lay an egg that hatches; the chicks from C's eggs may be too weak to grow into anything but runts; D's eggs may produce all males; E's eggs may produce heavy-laying pullets, and F's show birds. The only way to learn the capability of each hen and the value of the mating is to hatch her eggs alone and see what they contain. This article of Professor Pearl's was written seven years ago, and little progress, if any, has been made since. We are still forced to try out individual matings in order to find the one that produces the chicks we want. Slow work, yes, but all worth while work is slow. Meanwhile let us begin by buying better sires, only let us not stop there. Let us pedigree breed from these better sires and learn what matings bring the best results.

THE RIVERSIDE SHOW

By Jean A. Koethen

While the poultry show at Riverside in connection with the Southern California Fair was a disappointment to the management in point of size, some fine birds were shown, and the interest was considerable, as it always is. A poor hatching season and slowness of both molters and young stock to put on their new plumage were the reasons given for the comparatively small number of entries, only about 400 birds all told. "War rations have not been good for feathers," said Manager Harry Suits. "Some flocks have not molted well and all are slow." Doubtless the later shows will see many entries that were not ready for Riverside.

Turkeys and Waterfowl Lead

Whatever the causes may have been which prevented the entry of full classes of chickens, they did not keep turkeys and ducks and geese from attending in force. There were 25 Bronze turkeys, many of them very handsome specimens, and 16 White Hollands of unusual excellence, the largest number of this variety I remember seeing at any show. There were Rouen ducks, enjoying themselves in an artistically arranged pond in the middle of the main building; several White Pekins, and nearly a dozen Muscovies. Attracting even more attention because of their comparative rarity were 14 splendid Toulouse geese, somewhat disturbed by the noise around them, but still bearing themselves like the lordly creatures they are.

Red Alley Longest

Rhode Island Reds seldom fail to lead the show in numbers, and this show was no exception. The best bird in the show was a Red, and color and type of all the birds shown were fully up to the standard Red breeders have set for themselves. Next to Reds in point of numbers were the Anconas, and White Leghorns came third on the list. These three varieties made up fully half the show.

A White Show

While the number of Reds was greater than that of any other breed, it would not be straining the truth to call this a White Show, because of the unusual predominance of white birds, both in number and quality. There were the White Leghorns which have already been mentioned, 45 of them, and many very handsome birds among them, 30 White Wyandottes of exceptional quality, 29 White Rocks—an unusual showing for this variety—10 Rhode Island Whites, 15 Light Brahmas, which are so nearly white that they deserve a place with the white birds, and four Faverolles, lovely, fluffy biddies which are only occasionally seen in our local shows.

Cornish was a very small class, only one pen being shown, and there was only one exhibitor of Barred Rocks though he brought a fine string. There was a sprinkling of Brown Leghorns, Black Minorcas, Golden Gates, Silver and Partridge Wyandottes and a half a dozen varieties of bantams. Orpingtons, Andalusians, Langshans and a good many sub-varieties of the Leghorn and American breeds were conspicuous for their absence.

EGG LAYING CONTEST AT SANTA CRUZ

The egg laying contest at Santa Cruz will be continued another year. It is under the management of the Santa Cruz farm bureau, but is open to entries from any poultryman in the state. The contest starts November 1.

DOES SHE PAY?

How many cows in your herd are returning a fair profit for the feed consumed and how many are returning little or nothing or even costing money to keep? The profit made from a cow depends upon the amount of butterfat produced and the cost of producing same. Monthly records and the Babcock test will detect the boarder cows. Why waste time and money on cows that do not pay for their keep?

QUITE LIKELY

"But suppose," said one of the spectators on the common, "that the parachute should fail to open after you had jumped off—what then?"

"That wouldn't stop me,' answered the parachutist. "I'd come right down."—Boston Transcript.

TOUGH BIRD

Sam Darktown: "Dat turkey we had fo dinnah wuz hatched by an incubatah all right, Mose."

Mose Yellerby: "How does yo' know?"

Sam Darktown: "No turkey dat ebah knowed a mothah's care would 'a' turned out as tough as dat one wuz."

REMEMBER, going through the moult is like going through a long spell of sickness. To force out the old quills and grow new feathers saps a hen's vitality.

If you expect your hens to be fall producers and winter layers, then feed them Poultry Pan-a-ce-a during and after the moult.

Dr. Hess Poultry Pan-a-ce-a

will start your pullets and moulted hens to laying

It contains Tonics that put your moulted hens in fine condition—Tonics that tone up the dormant egg organs—Iron that gives a moulted, run-down hen rich, red blood and a red comb. It contains internal antiseptics that destroy disease germs that may be lurking in the system. No disease where Pan-a-ce-a is fed.

It brings back the singing—it brings back the scratching—it brings back the cackle. That's when you get eggs; and it's eggs you want—fall eggs, winter eggs—when eggs are eggs.

Feed Pan-a-ce-a to all your poultry to make and keep them healthy. The dealer refunds your money if it does not do as claimed. Tell the dealer how many fowls you have and he will tell you what sized package to buy. Always buy Pan-a-ce-a according to the size of your flock. 30c, 60c, and $1.25 packages. 25-lb. pail, $3.50; 100-lb. drum, $12.00. Except in Canada.

POULTRY

Prices to producers: Hens, lt. 32; heavy, 32@33; colored over 4 lbs., 36; broilers, 39; fryers, 28; roasters, 28; old roosters, 19; capons, 42; ducks, old, 23; ducklings, 27; ducklings, Pekins, 3½ up, 29; geese, 25; turkeys, 35@42; squabs, 45@47.

Belgian hares, 3 to 3½ lbs. live, 17.

LIVE STOCK

Weighed and delivered off cars without food or water:

Hogs (hard-grain fed) 125 to 150 lbs., 16.50; 150 to 225 lbs., 16.00.

Cattle (on foot, gross weight): Steers, good, 11.50@12.00; medium, 10.50@11.50; heifers, good, 9.50@10.00; fair, 9.00@9.50; cows, fair to good, 8.50@9.00; bulls and stags, 7.00; calves, 125 to 150 lbs., 12.00; 175 to 225 lbs., 11.00.

Sheep: ewes, 8.00@8.50; lambs, 13.00@15.00.

POTATOES AND ONIONS

These are the actual prices obtained between 7 and 8 o'clock October 21, by Los Angeles wholesalers from their sales to retailers, peddlers, hotels, restaurants, cafeterias, etc. Terms: Cash on the walk. There may be slight fluctuations during the day's trading.

Potatoes: Demand and movement good, market firm. New stock, Stockton; Burbank, best 2.90@3.15; others 2.50@2.60 per cwt.; Russets, 2.80@2.90 per cwt. Local: Lug boxes, 1.00@1.15.

Carlot Sales: Closing prices Monday, Stockton: Burbanks, sacked per 100 lbs., fancy 2.50@2.65, mostly 2.60@2.65; choice, mostly 2.25@2.40. Idaho: Russets, sacked per 100 lbs., fancy mostly 2.50. (Sales to 5 p. m. yesterday.)

Sweet Potatoes: 70@80 per lug; 2½@2¾ per lb.

Carloads, f. o. b. usual terms, 2.25@2.50 per cwt., mostly 2.25.

Onions: Demand and movement moderate, market strong. Home grown and Stockton: White Globes 95@1.00 per lug box; 3:25@3.50 cwt. Yellow varieties, 3.40@3.50 per cwt; lug boxes 95@1.00.

White Globe, cwt. sack, 2.75. Yellow, 2.50@3.00; Brown, 3.00@3.25.

Garlic: Local, per sack lots, 30.

VEGETABLES

These are the actual prics obtained October 21, by Los Angeles wholesalers in their sales to retailers, peddlers, hotels, restaurants, cafeterias, etc. Terms: Cash on the walk.

Beans: Green pods, lb., 8@10; Limas, 8@10; fancy shipping, 10.

Cabbage, lb., 1¾; crate, 1.00@1.50; ton, Winningstadt, Cannonball, 26.00@28.00.

Carrots, doz., 35@40; lb., 3.

Cauliflower: Local, per doz., 1.25@1.35; field crates, 2.00@2.75.

Carloads f. o. b. usual terms; Snowball, 1.40@1.50 crate.

Cucumbers: Local stock, lug boxes 65@70. Shipping stock, lug, 1.00@1.10. ping stock 85@1.00.

Celery: Local stock 1.10@1.35 per dozen bunches. Crates, 4.00@4.50; fancy shipping stock, 4.75@5.25.

Carloads f. o. b. usual terms; crate Golden Heart 4.50@4.75, crate included.

Corn: Roasting ears, lug of 3 dozen, 80@1.00.

Eggplant, best, lb., 3@4.

Peppers: Bell, 60@75 per lug box; others, 50@60; Chillis, best, 45@50; per lb., 4½@5. Shipping stock, high as 1.00 per lug.

Lettuce, local, cr., 1.35@1.50; shipping, 1.50@1.75.

Carloads f. o. b. usual terms; cr. Los Angeles or New York (Iceberg), 1.75@2.00.

Peas, local, lb., 10@12; best, 13@15.

Rhuharb: Local, box, 1.00@1.25.

Squash: Summer, lug, 80@1.10; others, 60@70.

Spinach, doz., 30@40.

Tomatoes: Lug boxes, ripe stock, best 80@90; others 65@70. Shipping stock, 90@1.25.

Carloads f. o. b. usual terms: Lug boxes, Stones, wrapped pinks and greens, in straight cars 1.20@1.25; In mixed cars, 1.25@1.35.

Turnips, doz., 45@50; others, 30@35.

FRUITS

These are the actual prices obtained October 21, hy Los Angeles wholesalers in sales to retailers, peddlers, hotels, restaurants, cafeterias, etc. Terms; Cash on the walk.

Apples, California: Bellefleurs, 4 tier 1.65@1.75; 3½-4½ tiers mostly 1.60@1.65; few $1.50. Local: Jonathans, scarce, packed, mostly 2.75; loose, 6@6½ per lb.; Delicious, 3.50; loose, 5@6 per lb. Northern: Jonathans, extra fancy, 3.25@3.40; fancy, 2.75@3.00; loose, 7 per lb.; locally packed, 3.00@3.25. Idaho: Jonathans, loose, 6½ per lb.; packed, fancy, 2.90@3.00; extra fancy, 3.25@3.35.

Bananas, 8¼@8½.

Cantaloupes: Quality and condition generally good. San Fernando local Honey Dews, 90@1.00; Paul Rose, pack standard, 1.50@1.80; best, 2.00@2.50.

Cranberries: Barrels, 13.25@13.50; boxes, mostly 4.00; 14 lh.

Grapes: Demand and movement light, market slightly stronger. Local and Northern stock: Per lb.: Tokays, 6@7½; Muscats, 4½@7; Malagas, 6@7; Concords, loose lugs, 9@10; Black Cornichons, mostly 6@7; Black Morocco, 5@6½; Rose of Peru, 5@6.

Nectarines, lb., best 6@7; others, 5@6.

Peaches: Demand and movement slow. Local, various varieties, 6@8 lb.; others, 4@5; lug boxes, best, 1.75@2.25; others, 1.00@1.50.

Pears: Northern Bartletts, No. 1, 7@9; No. 2's, 5@6 per lb.; lug boxes, 2.00@2.50; [illegible] packed boxes, 3.25@3.50.

Persimmons, lb., 12.

Pomegranates, lb., 7@8½.

Quinces: Local lug, 1.00@1.25; lb., 5.

Watermelons: Local Chileans and Klondikes, large, 1@2 lb., medium 1, small ½ lb.

Lemons: Valley stock: Fancy, packed, 6.50@6.75; loose, 5.50@5.75; local: packed, 3.50@4.00; best, 4.00@5.00; loose, 3.25@3.75. 4.75@5.50; best brands, 5.25@5.75; local

Sultanas, bulk, in 25s 14¼. Layers: 6-crown, flat pack, 20s, per box 4.05, 6-crown, flat, 10s, per box 2.20, 6-crown, flat pack, 5s, per box 1.20, 4-crown, flat pack, 20s, per box 3.20, 4-crown, flat pack, 10s, per box 1.75, 4-crown, flat pack, 5s, per box 1.00, 3-crown, tray pack, 20s, per box 3.10, 3-crown, flat pack, 20s, per box 2.95, 3-crown, flat pack, 10s, per box 1.60, 3-crown, flat pack, 5s, per box 95, clusters, 20-1s, cartons 3.45, clusters, 12-2s, cartons 3.80, clusters, 4-5s, cartons 4.50, vineyard run, 100s 13.00.

ALMONDS

California Almond Growers Exchange opening prices:

Nonpareil @32½, IXL @31½, Ne Plus Ultra @30½. Drake @23½.

GRAIN AND FEEDS

Oats: Red feed, 2.85@2.95; black, 3.00@3.10 per cental.

Corn: California yellow, 3.50@3.60 cwt.; Egyptian, 3.15@3.25; Milo Maize, 3.07½@3.15.

Rye, 3.25@3.35.

Barley, feed, 2.95@3.00; brewing, 3.15@3.20.

Wheat: Following are net weight prices for bulk grain, based on federal standards and grades at San Francisco Bay and Los Angeles Terminals:

	Per Bushel	Per Cental
Hard Wheat—		
No. 1	2.20	3.66 2-3
No. 2	2.17	3.61 2-3
No. 3	2.13	3.55
Soft White—		
No. 1	2.18	3.63 1-3
No. 2	2.15	3.58 1-3
No. 3	2.11	3.51 1-3
Club and Sonora—		
No. 1	2.16	3.60
No. 2	2.13	3.55
No. 3	2.09	3.48 1-3

For sacked grain add nine cents per bushel of 60 pounds to above price. Deduction of three-fourths of a pound is made for weight of standard grain bags. Wheat grading under No. 3 and mixed or smutty wheat will be purchased according to merit.

Mill Feed (per ton): Bran, 43.00@44.00; mill run, 42.00@43.00; Rolled Barley, 52.00@54.00. Linseed oil cake meal, nominal: cocoanut cake or meal, 41.00@42.00 per ton.

HAY

Under date of October 18 Scott-Magner & Miller says:

Receipts past week 1913 tons. Practically all by water. This week will probably clear up most of the hay around the Bay districts. Difficulty in obtaining shipments, together with the fact that most all hay from now on will have to be withdrawn from the warehouses, has caused the market to be somewhat firmer as all hay withdrawn from warehouses must take on the season's storage together with other expenses and the market will without doubt advance at least sufficient to cover same. Export trade continues about the same, with shipments somewhat light owing to the difficulty of effecting shipments on account of the stevedores' strike. Light inquiry for alfalfa. Straw is in heavy supply with a very limited demand.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the Hay Market—for prices to consumer, charges of cartage, commission and handling expenses must be added according to conditions:

Fancy Wheat Hay

Fancy Wheat hay (light 5-wire bales)	19.50@21.00
No. 1 Wheat or Wheat and Oat hay	17.00@20.00
No. 2 Wheat or Wheat and Oat hay	14.00@17.00
Choice Tame Oat hay	17.00@20.00
Other Tame Oat hay	14.00@17.00
Wild Oat hay	12.00@16.00
Barley hay	14.00@18.00
Alfalfa hay	17.00@22.00
Stock hay	10.00@14.00
No. 1 Barley straw, bale	50@80

Citrus Markets

Los Angeles, October 22. 1919.

Valencias of all grades except the very poorest are meeting good demand in all Eastern markets. Some 3,000 cars are yet to go from California packing houses. Car shortage makes it impossible for Valencias to be forwarded as quickly as shippers wish. Heavy movement of Florida fruit will begin next month. Porto Rico orangcs are being received in heavier amounts than was expected. Wild oranges sold in New York from 2.40-3.30.

Lemons have run over the $10 mark in New York. Prices are good in all markets.

Shipments

Shipments of oranges from Southern California to date since November 1, 1918: 34,354 cars, lemons 9,521, total 43,875. To same date last season: oranges 14,267, lemons 5,907, total 20,174. Central California this season: Oranges 4,427, lemons 354, total 4,781. To same date last season: oranges, 2,539, lemons 115, total 2,654. Northern California: oranges, 244 lemons 2, total 246. Last year same date: oranges, 203.

Philadelphia: 6 or., 1 lem. Val., 1.40@6.40; lem., 4.85@6.15.

MARKET NOTES

Walnut Grove district in Sacramento County reports stand good in celery fields and little root rot showing up. An average yield of a ton to the acre is expected.

Celery will soon be shipped from El Monte, Los Angeles County. The early crop shows up of fine quality and size.

Ingelwood, Los Angeles County, is now shipping lettuce. Weather has been to warm to head up well.

The Turlock sweet potato district has 45 per cent of the planting of the San Joaquin Valley. Another large sweet potato district centers around Atwater in Merced County.

Early cutting off of irrigation water in the Turlock section cut the yield of sweet potatoes to about 40 per cent of normal. Tubers are small but smooth and sound.

The peak of tomato shipment has passed in Central California.

Antioch, Contra Costa County, will soon be shipping celery.

Japanese berry growers are asking the state superintendent of weights and measures to reduce standard weight of berry baskets from 12 to 11 ounces.

The warehouse of the Almond Association at Oakdale recently burned. Growers are sending their stock to the Lodi plant. 80 tons of nuts were destroyed in the fire.

The Walnut Growers Association is already sold out on all stock in sight.

Tulare expects to start navel shipment the first of November.

Planting of cabbage in the El Monte district is well advanced and movement in small quantities is expected early in November. In Orange county, around San Fernando and other sections, however, transplanting from seed beds has not begun in any volume. Indications in all sections, based on current plantings and area of seed beds, are for considerably increased acreage due to good prices last season.

Labor shortage is holding back work in cauliflower districts but general indications show slightly increased acreage over last year, especially the early varieties. Wire worms are attacking new plantings in some fields. First carlot shipments are going east.

There are about 3,200 acres of cabbage in the San Joaquin Delta, as compared with 1,960 in 1918, showing an increase of 63 per cent. Movement is expected to begin from Staten Island and Tyler Island, October 15, and at Antioch November 1. The acreage in the El Monte district is around 700, and in Orange county probably 185. Some plantings in the El Monte district are well advanced. First shipments are expected early in November, but the bulk of the movement will be in late December and early January. Condition of the crop in this section is very good. The recent rains have greatly benefitted cauliflower, cabbage and lettuce.

Lettuce shipments are being made in mixed cars only. Stock is leafy and soft.

Imperial Valley reports an increased acreage contracted to lettuce over last year.

Car shortage has seriously interfered with shipment of tomatoes in Southern California. Shippers are refusing to accept anything except green stock. Pinks and ripes are being hauled to canneries at $16 and $18 per ton. The peak of the movement is expected the last of October.

Australia is landing large shipments of eggs at San Francisco.

Price on Lima beans grown by members of the Lima Bean Growers' Association of California has been fixed at 14½ cents for regular Limas and 13 cents for baby Limas.

Heavy receipts of grain from Texas has depressed the market in Los Angeles.

A slightly strengthened demand for onions is shown on Los Angeles market.

Grapefruit prices have gone up—on best grades—as much as a dollar a box, $6.50 being the top price.

The National Industrial Conference Board is publishing results of its investigation of cost of living for the five year war period. It finds that the cost of living in America has advanced during that period 71 per cent, the largest advance being on clothing, 100 per cent; next food, 85 per cent.

ARE YOU A "GOWAG"?

By G. W. Morrison

Every motorist is either a "Gowag" or a "Goiwag" — and the "Gowags" think they have something on the "Goiwags".

"Are you a Gowag?"

Two motorists were talking in the rooms of the Automobile Club of America in New York City, one afternoon recently, and the elder propounded this question to the younger.

"Am I a what?"

"I said, a Gowag. The word is very useful. I will take all the credit for inventing it. I was on a trip recently, and I found that at the end of each day's run there were certain things that I ought to think or, to attend to, and every now and then I found myself forgetting one or two of these things. So I hit upon the idea of devising a word made up of the initial letters of the five things that I ought to think of each day.

"G for gasoline. Of course, I had to see that the tank was replenished.

"O for oil. The car has simply got to have an abundance of oil, and it must be the right kind.

"W for water. The engine has a thirst, especially in these dry days.

"A for air. The tires must be inflated to the correct air pressure. Ten miles on tires underinflated may take hundreds of miles off of the end of their lives.

"G for grease. At the end of each day's run I must turn certain grease cups, one complete turn or more, otherwise I shall have squeaks in my spring and other troubles."

"That is a great idea," said the other man, "and I can see that in making up the word Gowag you have given the five points in what seems to me their proper order of importance—but, say, you have left out one thing that bothered me like blazes on my last trip, and I think you ought to put it right after gasoline and oil. It is ignition."

"Well, that would make a new word, 'Goiwag'."

"Yes," said the younger man, "and I can tell you that with a battery ignition system, such as I have, you cannot be too careful that your contact points are properly cleaned and adjusted, that there is no short circuit in the wiring, that you have an ample supply of good fuses and that everything is wired up properly. I started on my last trip with my battery discharging instead of charging and did not notice it until I had nearly wrecked it with the constant strain of ignition service."

SEED WHEAT FOR SMUT

Two methods have been in common use for the prevention of smut in wheat; one is called the bluestone and the other the formaldehyde treatment. Recent investigations have shown that the soil often becomes infected with smut and that even if the seed is carefully treated the plant becomes infected from the soil. With this in mind Professor Mackie of the University of California developed a double treatment with bluestone and lime water that would avoid this trouble. Unfortunately this method requires such careful manipulation that several farmers destroyed the germinating powers of their wheat and had to reseed their land.

There is no question but that smut is a very serious menace to the wheat industry of the whole Pacific Coast It greatly reduces the yield and makes the milling expense much higher. Not a single pound of wheat should be sown that shows any signs of smut and every kernel should be treated by one of the three methods, instructions for any of which can be obtained from the University of California.

Some of Sperry investigations seem to indicate that the use of bluestone alone tends to retard the germination of the wheat, (this is also true with formaldehyde, but to a lesser degree) and that if the seed so treated happens to be planted during cold, damp weather the germinating power is so reduced that a very poor stand is often the result. We know that the farmers in the Montezuma hills have for many years raised wheat almost entirely free from smut and they all use bluestone very consistently. It may be that those ranchers who get good results with bluestone follow fairly closely the method of summer fallowing and that they sow their wheat early and get benefit of enough warm weather to germinate the seed.

IRRIGATION OF FIELD CROPS

The agricultural experiment station of the University of Nevada has issued a 42 page bulletin, No. 96, "Irrigation of Field Crops in Nevada", which should be of particular value to producers in Colorado and that section of arid America. It refers to the fact that there are 70,000.000 acres of land in the state and only 900,000 acres, or 1 1-3 per cent, of the acreage was irrigated in 1918. The principal crops grown in the irrigated section are alfalfa and potatoes. The final determination of the bulletin is as follows:

"The results of these investigations in the irrigation of field crops show that the most economical use of water was obtained with a total irrigation of 3.5 feet in six inch applications for alfalfa and clover; 2.3 feet in seven inch applications for wheat; and 1.5 feet in three inch applications for potatoes and sugar beets. When alfalfa fields are used for fall pastures, usually an additional irrigation is required after the last crop of hay is harvested."

PHILIPPINE DEVELOPMENT

Since the United States came into possession of the Philippines those islands have enjoyed a greater development in all agricultural lines than has ever taken place in the history of the world in the same term of years. Pure bred sires of all lines of domestic animals were sent there from this and other countries, seeds and plants introduced, diseases and ailments of the people suppressed and controlled, sanitary and educational matters developed and improved and crop production perfected. Insect pests and plant diseases have been exterminated or controlled, and in 1917 the islands were freed from the locust pest for the first time in their history. All agricultural lines are now more highly developed in the Philippines than in any of the surrounding countries.

LAND CONFERENCE

A conference was recently held in the office of the secretary of agriculture, Washington, D. C., attended by the greatest agricultural leaders and authorities in this country. A comprehensive program of investigations was worked out in the conference, covering methods of increasing the area of land in farms; the better and more complete utilization of land now in farms; causes, effects and general significance of tenancy; relations of landlords and tenants; and policies in use in various countries for improving the economic and legal relationships of farmers to the land they cultivate.

TANNING FISH LEATHER

We have heard of no fish leather tanneries in California but there is one in Washington for tanning hides of sharks, hair seals, etc. There is one in North Carolina and one in Florida for tanning hides of sharks and porpoises. The government reports the number of these stations will rapidly increase as the leather is capable of wide use, oil is extracted from the livers and the bodies converted into fertilizers.

CANNED TOMATOES IN 1919

The government estimate of California's canned tomato pack for the present year is 1,664,610 cases of No. 3s, about 93 per cent of last year's figures. This report is based upon the figures submitted by 39 packing firms. Reports would indicate an increased acreage next year.

GASOLINE ENGINES at GREAT Reductions

To close out all gasoline engines in the $15,000 implement stock sale announced we will October 11th make the following big cut in prices:

One 1½ h. p. Fuller and Johnson, Regular Price $125.
Sale Price only $67.50

One 1½ h. p. air cooled on Myers 5x5 direct connected pump, Regular Price outfit $175.
Sale Price $99.00

One 1½ h. p. Fuller and Johnson engine connected to 3x5 Trahern force pump, Regular Price $200.
Sale Price only $123.50

One 2½ h. p. F. and J. engine, Regular Price $190.
Sale Price $97.50
This is a great bargain.

One 1¾ h. p. Sultan Engine and Hurst Duplex Spray pump, Regular Price $175.
In the Sale at only $115.00

One 3 h. p. Hurst greyhound upright engine, Regular Price $125.
Sale Price $75.00

One 1½ h. p. One Minute Engine, Regular Price $65.00.
Sale Price $40.00

One Hurst Spray Pump, 4 gallons per minute, suction hose, Regular Price $75.00.
Sale Price $45.00

Others to be sold including Cushman, Master Workman, one steam engine, etc., all at prices that cannot be duplicated anywhere. Write for price list of the big $15,000 implement stock and save money when prices on everything are going up.

ROUND HALLOWE'EN

Rour
For
No n
The
There
A witch in tall and peaked hat,
And just beneath her, in a rage,
There stands a black and snarly cat.
With back arched high in the air,
As if about to spring.
You surely know by things you see
It's nearing Hallowe'en.
And Brother Jack has made a head
Of pumpkin, large in size,
And then he lights a candle
To shine from out the eyes.

TOO AMERICAN

Continued from last week.

"Sir or madam," I said, letting the regret I felt be apparent in my voice, "I beg your pardon. If you please, I should like to know whose ghost you are. I will repeat the alphabet. You may rap when you wish me to stop at a letter. In that way you can spell out your information. Is that satisfactory?"

It was.

"Who are you?"

Slowly, and with the assured raps of one whose social position is secure in whatever state of existence she may chance to find herself, the ghost spelled out: "Lady Agatha Pelham."

I hope I am not snobbish. Indeed, I think I have proved over and over again that I am not, by frankly confessing that I am an American. But at the same time I could not repress a little exclamation of pleasure at the fact that we were haunted by the ghost of a member of the English aristocracy.

Next time you buy tea, don't think of "a pound of tea." Think of the cups of tea you are going to drink.

Think of the pleasure you are going to get. Think of the real tea-flavor.

Then think of tannin—ugh!

Now do you want common tea or Schilling Tea, the fine economical practical tea?

There are four flavors of Schilling Tea—Japan, Ceylon-India, Oolong, English Breakfast. All one quality. In parchmyn-lined moisture-proof packages. At grocers everywhere.

A Schilling & Co San Francisco

Water!

All you want the year round wherever you want it—for house, barn, field, any place. Bore your own well, as thousands have done, with our time-tested

Standard Well-Boring Outfit

Easily operated by hand. Bores wells 8 to 16 in. dia., up to 100 ft. deep. One man bought outfit 8 years ago and has bored over 25,000 feet of wells.

BORES 100 FT. WELLS BY HAND

Make $20 to $30 per day boring wells for neighbors—easy to get 50 cts. to $2 per ft. E. C. Cole, Porter, Okla., writes:—Have just bored 41 foot well for neighbor in one day and made $41.00.

★ Thousands used during war by U. S. and English Governments. ★

Satisfied users in 46 states.

Every claim guaranteed and proved. Write TODAY for information and testimonials.

ghost of a member of the English aristocracy.

that of a couple of telegrapn operators chatting over the wire.

Lady Agatha sympathized with our desire to become as English as possible; she could quite understand that. I find that many Englishmen approve the effort, although remaining confident that it will end in failure. Lady Agatha helped us a great deal. We used to have lessons in the evenings in the library. For instance, I would pretend that I was an Englishman in a railway carriage, and that an American had just entered and I was afraid he would speak to me. I got rather good at this, and made two or three trips to London to try it out. I found that Americans were imposed upon, and actually in one instance I made one Englishman think that I was an Englishman who thought he was an American.

Uncle Bainbridge used to attend our evening classes with a contemptuous expression upon his face, and snort at intervals. Once he even called me "Puppy!" Then he thrust his telephone arrangement before my face and insisted that I tell him whether I was sane or not.

"Puppy!" he bellowed. "Quit apin' the English! I get along with 'em myself—without any nonsense! Treat 'em white! Always treat me white! No foolishness! Puppy!"

My wife and I soon discovered that Lady Agatha and Uncle Bainbridge were on the most friendly terms. He would sit for hours in the library, with his telephone receiver held patiently near the bookcase, shouting questions and smiling and nodding over the answers. Marian and I were afraid that Uncle Bainbridge, by his lack of polish, might offend Lady Agatha.

Indeed, we need not have worried about Uncle Bainbridge's offending Lady Agatha; the friendship grew closer and closer. One day my wife stopped me just outside the library door and said in a whisper, indicating the general direction of Lady Agatha's bookcase with a wave of her hand.

"Henry, those two old things in there are calling each other Hiram and Agatha."

I listened, and it was so. A week later I heard Uncle Bainbridge seated by the bookcase, bellowing out a sentimental song. He was having a great deal of difficulty with it, and in order that he might hear himself he was singing with the black disk arrangement held directly in front of his mouth.

I cannot say that Uncle Bainbridge became etherealized by the state of his feelings toward Lady Agatha, but he cut out the bunches of gray hair from his ears, and he began to take care of his finger nails. Lady Agatha was having a good influence upon him.

My wife and I were very well contented that Uncle Bainbridge's feeling for Lady Agatha should grow stronger and stronger. We argued that while he was so intimately friendly with dear Lady Agatha he would not be so likely to fall a prey to any person who might want to marry him for his wealth.

But this cheerful condition of affairs was not destined to last many weeks. One day my wife received a letter from her cousin, Miss Sophia Calderwood. Cousin Sophia was in London, and would be with us on the coming Saturday.

Miss Sophia was past her first youth, but still very girlish at times. Under her girlishness there was a grim determination. She had made up her mind to marry Uncle Bainbridge.

So we both considered Miss Sophia's visit rather inopportune. Not that we felt that Uncle Bainbridge was predisposed toward her. On the contrary, he had always manifested more fear than affection for her. But, I repeat, she was a determined woman. Miss Sophia, when she arrived, was more girlish than I had known her in fifteen years. And she had set up a lisp. She greeted Uncle Bainbridge impulsively, effusively.

When we told Miss Sophia about Lady Agatha, and she finally understood the intimacy that had grown up between Lady Agatha and Uncle Bainbridge, she looked reproachfully at my wife, as if to
traitor to my
announ
sure
to make the
this person!"

Sophia, although certain now he would receive no assistance ny wife in her siege of Uncle idge, did not swerve from her determination to subjugate him. I do not know whether I have mentioned it or not, but Miss Sophia could scarcely be called beautiful. One after another, all her life, she had seen men upon whom she had set her affections become the husbands of other women, and in her duel with the ghost there was a quality of desperation that made the struggle, every move of which I watched, extremely interesting. In spite of her announcement that she did not care to meet Lady Agatha, she learned the code by which she communicated with us. Miss Sophia must have been desperate indeed, or she would not have resorted to the trick she used. About a week after Miss Sophia's arrival Lady Agatha suddenly ceased to communicate with us. In the light of what happened later I am sure that Miss Sophia deliberately drove Lady Agatha away.

Several days after Lady Agatha fell silent I heard Uncle Bainbridge bellowing forth questions in the library. I was outside the house near the library window, which was open. Thinking joyously that Lady Agatha had returned to us, I stepped nearer to the window to make sure. I saw at once, as I peeped in, that the bookcase, which set very near the window, had been slightly moved. Miss Sophia, who was very thin, had managed to introduce herself into the triangular space behind it. She was crouched upon the floor rapping out a conversation with Uncle Bainbridge—impersonating Lady Agatha! Uncle Bainbridge, in front of the bookcase, was apparently unsuspicious; nor did Miss Sophia suspect that I saw her through the half-inch of window that commanded her hiding place.

"You must marry!" rapped Miss Sophia, in the character of Lady Agatha.

"Who?" bellowed Uncle Bainbridge.

"Miss Sophia Calderwood," said the fake ghost.

"Aggie, I'm hanged if I do!" yelled Uncle Bainbridge. "Ask me—something—easy!"

"Hiram, listen carefully," began the false Lady Agatha. Then she told him that this would be their last interview. Circumstances over which she had no control compelled her to depart. She was to assume another phase of existence upon another plane. And she knew that he would be happier wedded to some good woman. It was apparent to her that Miss Sophia would make him the ideal wife. Finally Uncle Bainbridge snorted out his pledge and stumped away.

That night he went to London. It was a week before he returned.

The night that he came back he gathered us all about him in the library. "Something to say! Important!" he shouted.

We all assumed attitudes of attention.

"Think maybe—get married!" said Uncle Bainbridge. It was just like Uncle Bainbridge to announce the matter in the lady's presence before having formally asked her; but I felt that it was a trifle hard on Miss Sophia. A glance at her reassured me on that score. She was flushed; but it was the flush of triumph rather than the flush of embarrassment.

"Bought a castle!" said Uncle Bainbridge, warming to the work. "Fine castle! Like castles! Fix it up! Live in it! Settle here! Like England! Fine country!"

"A castle! Oh, how lovely!" shrilled Miss Sophia, clapping her hands girlishly. "How lovely for all of us!"

"Not invited!" roared Uncle Bainbridge, taking us all in with one sweeping gesture. "None of you!"

There was silence for a moment.

"Going to get married!" said Uncle Bainbridge, raising to his feet. "Not Sophia! Caught Sophia—behind bookcase! Knew all the time! Sneaky trick! Marry fine woman! Henry saw her—over the fence that day! Fine woman! Curate's mother here! Dumplings! Fine dumplings! Learned to make 'em for me! She don't want—to get too thick—with any my relations! She says—all of you—are too American!"

The Cultivator Patterns

THE CULTIVATOR PATTERNS

2694—Girls' Dress. Cut in 4 sizes: 6, 8, 10 and 12 years. Size 10 will require 3½ yards of 40 inch material. Price 10 cents.

3017. A Pleasing Dress. Cut in 3 sizes: 16, 18 and 20 years. Size 18 will require 6¼ yards of 38 inch material. Width of skirt at lower edge is about 1½ yards. Price 10 cents.

3005. Boy's Suit. Cut in 4 sizes: 3, 4, 5 and 6 years. Size 4 will require 3¼ yards of 27 inch material. Price 10 cents.

3016. Ladies' House Dress. Cut in 7 sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. Size 38 requires 5¼ yards of 36 inch material. Width of skirt at lower edge is 2¼ yards. Price 10 cents.

3007—Junior's Dress. Cut in 3 sizes: 12, 14 and 16 years. Size 14 will require 3¾ yards of 44 inch material. Price 10 cents.

3015. Ladiss' Drsss. Cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 38 requires 6⅜ yards of 44 inch material. Width of skirt at lower edge is about 1¾ yards. Price 10 cents.

3018. Child's Play Dress. Cut in 4 sizes: 2, 3, 4 and 5 years. Size 3 will require 2¾ yards of 27 inch material. Price 10 cents.

3023. Ladiss' Apron. Cut in 4 sizes: Small, 32-34; Medium, 36-38; Large, 40-42; and Extra Large, 44-46 inches bust measures. Size Medium requires 4¾ yards of 36 inch material. Price 10 cents.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH

How to Order Patterns

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 cent) stamps for each number. In order to furnish our readers with the very latest Chicago styles, all pattern orders are filled in Chicago. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

CATALOGUE NOTICE

Send 10 cents in silver or stamps for our Up-to-Date FALL AND WINTER 1919-1920 CATALOGUE, containing 550 designs of Ladies' Misses' and Children's Patterns, a CONCISE AND COMPREHENSIVE ARTICLE ON DRESSMAKING, ALSO SOME POINTS FOR THE NEEDLE (illustrating 30 of the various, simple stitches) all valuable hints to the home dressmaker.

A HALLOWE'EN AUTO PARTY

By Ruth Dougherty.

It was entirely informal, of course, as a Hallowe'en auto party must be to be any fun. Three machine loads of neighbors and friends drove to the beach 15 miles away for a picnic supper.

We left home at half past five, so it was just growing dusk by the time we reached the beach. All scattered to gather driftwood and there was soon a great heap for the bonfire. A little quick fire was built at one side, and over it the folding wire broiler had its stout pointed legs driven into the sand. On it the coffee pot was placed, and then the wienies and bacon. Long handled meat forks were used to turn the meat.

Meanwhile the "table" was being set. There was a crepe paper cloth and napkins printed in gay colors with witches and black cats and jack-o'-lanterns. In the center was a real pumpkin jack-o'-lantern surrounded by apples, grapes and nuts, and at each place a tiny papier mache jack-o'-lantern filled with small, hard candies. Paper plates were used and each one brought his own cup, glass, fork and spoon.

The jug of cider and the glasses were at one end of the "table," the coffee pot and cups at the other. Wienies and bacon, sizzling hot from the fire, were placed in split finger rolls and vanished quickly. Then there were a big dish of potato salad, sandwiches of whole wheat bread spread with peanut butter and apple butter, and rye bread with soft cream cheese, sour dill pickles and doughnuts.

The children of the party could not long content themselves sitting down, but hopped about the bonfire, sandwich or doughnut in hand, and made little dashes down the beach after the receding waves, to come scampering back with happy shrieks for another supply of eats. Meanwhile at the table jokes and stories were passed about as well as eats.

Then fresh wood was heaped on the bonfire and everybody joined in an impromptu witch dance about it. Some of the boys rode broomsticks of driftwood and now and then an awesome figure would creep with hollow groans from the darkness beyond the fire till the light revealed it was only hooded with dried seaweeds. A discarded can furnished the music and somebody found a toy whistle to add to the pandemonium.

"The jolliest Hallowe'en ever" was the universal verdict.

HALLOWE'EN GAMES

Cut cardboard in the shape of a cat, covering one side with black paper. On the other write:

1. A cat and a part of a tree.
2. A cat that will be a butterfly.
3. A wet cat.
4. The Roman cat.
5. A sanguinary cat.
6. The horned cat.
7. A cat and a form of the verb "to be."
8. A cat and a toilet article.
9. A cat and a relative.
10. A cat that throws stones.
11. A cat which brings trouble.
12. A cat and what Jack Frost does to flowers.

Leave space under each number for a word, one syllable of which is "cat." The answers are: 1. catalogue. 2. caterpillar. 3. catarast. 4. Cato. 5. category. 6. cattle. 7. catarrh. 8. catacomb. 9. catkin. 10. catapult. 11. catastrophe. 12. catnip.

Around the neck of two of the cardboard cats tie a red ribbon; around two others, a green, and so on, using a different color for each pair until you have as many cards prepared as there will be guests. These of course are to pair off the party for the guessing game. A little pumpkin pie with a jack-o'-lantern face made of currants will serve for first prize and a bright red apple for booby.

"Guessing Eyes" is an old Hallowe'en game. A strip of white muslin has "eyes" cut in it at intervals, each opening being numbered. A sheet fills the white wall and a figure dressed like a ghost conducts the girls behind it. Each girl takes a number corresponding to the number on the muslin, and standing close to the eyeholes looks through steadily for one minute. The boys are lined up six feet from the cloth and guess the person, by number, from what they can see of the eyes. Then the boys go behind the muslin and the girls guess the owner of the eyes they see in the same way.

A wheel of fortune will furnish much fun. Cut a large pasteboard disk and paint it to represent a wheel. Fasten with a nail on a large wooden board, to turn easily. Draw a circle outside the wheel and paint numbers around it. An arrow is firmly fixed to the nail so that it does not revolve. Have a witch in costume preside over the wheel. She has a large rustic basket filled with fancy envelopes, each numbered and containing a fortune in verse. The guests in turn give the wheel a turn or spin and receive from the presiding genius an envelope with the number corresponding to the one to which the arrow points when the wheel stops.

Bobbing for apples in a little different way is done by putting an apple on one end of a two-forked stick and a little bag of cheesecloth filled with flour on the other end. Hang the stick by a string midway, in a doorway or from a chandelier. A bite out of the apple wins the trick, but there is many a slip. Prizes may be candy or odd toys.

HALLOWE'EN GOODIES

Sugared Popped Corn.

Put two tablespoons of butter in a saucepan and, when melted, add two cups brown sugar and one-half cup water. Bring to the boiling point and let boil 16 minutes; pour slowly, while stirring constantly, over two quarts of popped corn and continue stirring until every kernel is well coated with sugar.

Cocoa Fudge.

One-half cup milk, three level tablespoons butter, two and one-half cups powdered sugar, six level tablespoons cocoa, pinch of salt, one teaspoon vanilla; mix all ingredients together but vanilla; cook, stirring constantly, until it begins to boil; then cook slowly, stirring occasionally eight or ten minutes, or until it makes a firm ball when dropped in cold water. When cooked enough add the vanilla and beat until it is like very cold molasses in winter. Pour in buttered pans; when firm cut in squares. Great care must be taken not to beat too much, because it cannot be poured into the pan and will not have a gloss on top.

Apple, I pare and swing to know
Who I soon shall marry;
From my hand I now thee throw,
Mystic letter carry.

HOUSEHOLD CONTEST

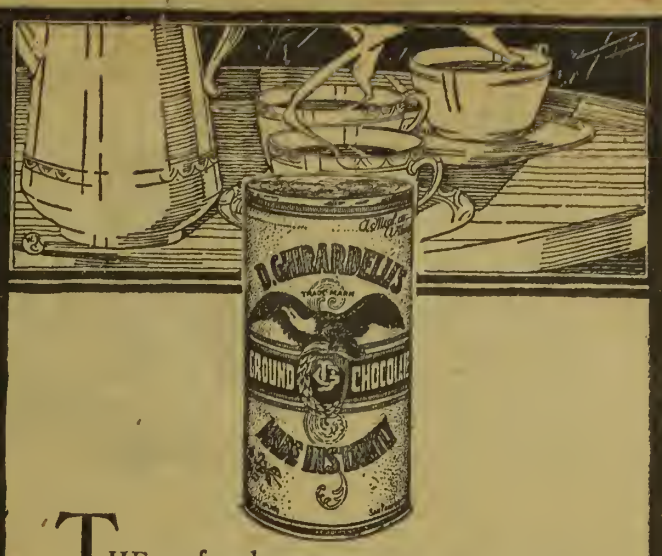
The Cultivator will renew the household contest feature which has brought so many interesting letters into its columns. On November 22 the department will be given to Thanksgiving letters.

How are you planning to observe the day? The dinner, of course, will be the big feature. What is the menu? Tell Cultivator readers how to make at least one of the good things that will appear on your Thanksgiving table. Just a friendly, chatty talk from one neighbor to another is what the Cultivator likes best to print and its readers like best to see.

Four hundred words is the limit for each letter. Please write on one side of paper.

For best letter $2 in cash will be given; for second best, $1; for all others published, one year's subscription to California Cultivator. With your letter please send name and address of one to whom you wish subscription credited.

All contest letters should be in this office by Saturday morning November 8. Address California Cultivator, Los Angeles.



THE refreshment tray can always thank Ghirardelli's Ground Chocolate for its magic aid. Creamy hot chocolate to drink; cakes with possibly a chocolate filling and frosting; waxy squares of chocolate fudge—not to mention countless other "goodies"—appear in a twinkling when the hostess summons the ever-ready can of Ghirardelli's.

Never sold in bulk—but in cans only.
In ½ lb., 1 lb. and 3 lb. sealed cans—
at the store where you do your trading.

Say "Gear-ar-delly"

Overland

TRADE MARK REG.

The New Overland 4, with Three-[illegible]oint Cantilever Springs, the Greatest Imp[illegible]vement in Riding Comfort Since Pneumatic Tires

THIS handsome new Overland *has a Springbase of 130 inches*—yet a wheelbase of only 100 inches.

It is a new type of car with a new standard of riding comfort.

The springs are Three-Point-Cantilever springs of Chrome Vanadium steel, a new type of spring exclusive with this new Overland.

They give the Overland 4, with its light weight and ease of driving, the road-comfort and road-steadiness formerly confined to heavy, expensive cars of long wheelbase.

They end the ordinary bouncing, vibrating over the bumps. They stop the usual swaying, twisting and jars that fatigue the passengers and rack the car.

The wheels and springs go up and down, following the bumps, but the passengers and car are shielded from road blows. The Three-Point Springs protect the mechanism from road injuries and prolong the life of the car.

Light weight brings great economy of tires and gasoline.

High quality materials and workmanship are used in Overland 4 throughout. Its [illegible]ipment is high grade, complet[illegible]om Auto-Lite Starting and Lig[illegible]g to Demountable Rims.

Ask the Overla[illegible]ler to show you this new moto[illegible]ich has been tested more th[illegible]000 miles, let him explain to [illegible] exclusive Three-Point Cantil[illegible] springs, then—

Select rough roads that you formerly dreaded to ride over and see what it means to ride in Overland 4.

Grand Champion Holstein Bull, Los Angeles Show

Merci Lad Korndyke Burke

Owned by Santa Anita Rancho

BIG DOUBLE DISPERSAL SALE

Mr. G. W. Emmons, Proprietor of DIABLO STOCK FARM, Danville, Calif., has instructed us to sell at public auction to the highest bidder his entire herds of registered horned Hereford cattle and registered Duroc-Jersey hogs at

WESTERN HORSE MARKET, 297 Valencia Street

San Francisco

Monday, November 10, 1919

at 9:30 A.M.

We shall begin to sell the Duroc-Jersey hogs promptly at 9:30 A.M. on the above date, and sell the cattle immediately after the hogs are sold.

52 REGISTERED HEREFORDS 52

Mr. Emmons is selling his entire herd of horned Herefords only because he has decided to build the largest herd of quality POLLED HEREFORDS in the West, and wishes therefore to center his efforts upon polled cattle exclusively.

The cattle in this offering are bred in the most substantial and popular lines of the breed, and include many high class individuals.

20 Choicely Bred Breeding Cows

There are twenty breeding cows in the sale, some with calves at foot, and a large number well along with calf to BERTRAM FAIRFAX and WITCHFORD.

15 Desirable Heifers

There are some especially good heifers to be sold, among them a number of daughters of BERTRAM FAIRFAX and MUNIZ. These heifers range from 2 year olds to calves.

17 Bulls

The list of bulls is headed by BERTRAM FAIRFAX, who is by a son of the famous PERFECTION FAIRFAX, whose descendants have won high honors in many show rings and have commanded top prices in the best sales. He was grand champion at the San Francisco Land Show and getting a fine lot of calves.

There are nine bulls in the sale about ready for service, among them some that should command the attention of breeders, while the rangeman will find a good selection for his purposes.

These cattle will be sold in just good thrifty range condition.

Every animal sold as a single lot guaranteed to be a breeder; every animal over six months old tuberculin tested.

100 REGISTERED DUROC-JERSEYS 100

The sale of this herd at this time does not mean the retirement of DIABLO STOCK FARM from the breeding of Duroc-Jerseys. The decision to sell was reached only in view of extensive changes and improvements to be made in the hog department of the farm to accommodate even a larger herd than at present.

60 Sows and Gilts of Breeding Age

This sale is a rarely good opportunity to secure well bred sows and gilts, and there is an unusual uniformity of breeding throughout, as practically all of them are sired by the great show and breeding boar CALIFORNIA'S DEFENDER, Junior Champion boar at Panama-Pacific International Exposition. There are some excellent show prospects among them, and a very large number of most promising brood sows.

California Orion Cherry King

who is by a son of Orion Cherry King and out of a daughter of Joe Orion 2nd, will be sold. Many of the sows and gilts are bred to him and his first litters indicate that he is breeding fully up to the standard of his pedigree and individual merit.

Every animal immunized against cholera by the double treatment

Remember that the sale begins promptly at 9:30 A.M. Some of the best will be sold early.

Vol. LIII, No. 18 Los Angeles, November 1, 1919 One Dollar Yearly

The Los Angeles Livestock Show

By R. P. Royce

ANY doubts that may have been entertained that Los Angeles and Southern California were not ready for a real livestock show were dispelled by the first annual Los Angeles Livestock Show which opened October 18 and continued until October 26. For eight days thousands of visitors thronged the grounds to learn at first hand the real status of the livestock industry in Southern California, and it is certain that no western show has served the purpose for which it was established to better advantage than did the show just closed, and if the initial event is to be taken as a criterion, the permanency of the show should be assured.

After the grief experienced last year, when on account of the influenza the opening was delayed week after week, some doubt was expressed as to whether a success could be registered this year—the question was answered by this year's show.

Manager Thomas, since June 14, the day the show was assured, succeeded in whipping into shape an exceptionally well balanced exhibit of the leading breeds of livestock. As a matter of fact it can be stated that a number of the departments staged shows the equal and in some cases the superior of any seen on the coast.

The arrangement of the grounds and the accommodations were most excellent for so young a show. The entire livestock exhibit, except the light horses, was concentrated in a number of barns that practically joined each other, thus making it possible for visitors to see the whole exhibit without great effort. The facilities for judging were fairly convenient, save for the swine, in which case it was necessary to drive the hogs a considerable distance through the crowd.

The most convincing evidence that a show is filling a real place in a community can be found in the interest manifested around the judging rings, and one of the most noticeable features of the show was the keen crowds that filled the seats about each ring. No one could fail to catch the spirit of the crowds—they were interested in better livestock and were there to learn the most acceptable types. The show furnished the first opportunity many had had to become acquainted with the best of the improved breeds, and the opportunity was improved.

Each afternoon the crowds were entertained with races and an outdoor horse show. The latter event was one of the most delightful affairs of the kind ever held in Southern California and brought out a surprisingly high quality of pleasure horses. The various horse show classes were judged by Charles W. Green of Centralia, Missouri, a judge of national reputation.

Sam H. Greene, secretary of the California Dairy Council, had an extensive exhibit outlining the work and aims of the council. A feature of the exhibit was the "milk bar" where the food value of milk was stressed and made available in a long list of milk drinks.

The state department of agriculture had an educational exhibit based on the work of the newly organized department.

One of the most instructive features of the entire show, from the dairyman's standpoint, was the demonstration conducted by F. H. Scribner of the dairy division of the Los Angeles County farm bureau. This demonstration concerned the work of the cow testing association and included a number of cows selected to make plain the importance of accurate knowledge as told by the scales and the Babcock test. Five cows were used. Those attending the demonstrations were asked to pick the best producers on their individuality. The daily records were given as well as the records for the year. No demonstration could have been more convincing and it is certain that many a dairyman took the lesson to heart.

Another attractive feature of the show was the splendid exhibit made by the Santa Anita Rancho. The exhibit was housed in two specially built barns and included Holsteins, Percheron, Arabian and thoroughbred horses and jacks. Competition was made only in the Holstein classes. The exhibit was arranged by Manager W. H. Taylor.

Beef Breed Champions

Bashan Augusta, grand champion Shorthorn bull, owned by Dibblee Estate, Santa Barbara, California.

Little Sweetheart, grand champion Shorthorn female, owned by T. S. Glide, Davis, California.

Miss Rialto, grand champion Hereford female, and Bonnie Laddie, grand champion Hereford bull, both owned by the Hereford Corporation of Wyoming.

Anxiety Fairfax, second prize two year old Hereford bull, owned by Wm. Henn, Kansas City, Missouri.

The weather man was kind throughout the week save on Friday when a light shower kept down the attendance.

The total attendance was not as large as had been hoped for, but was encouraging. Perhaps the gate receipts would have been larger had the daily papers of Los Angeles been more generous in the amount of space given the show The success of a show depends upon the attendance, and no factor is more important in creating interest than the daily press. It is to be hoped that in the future the Los Angeles papers will realize the importance of such shows to the community.

BEEF CATTLE

With herds from Missouri, Wyoming and Washington competing with some of the best owned in California, the showing of beef cattle was of a quality to bring forth much commendation, and the interest manifested adds to the conviction that no class of livestock is coming in for more attention during the next few years than will be accorded beef cattle.

All the exhibitors from other states exhibited at the 1918 Liberty Fair and the fact that they returned indicates that they consider California a promising field.

Frank Brown of Carlton, Oregon, western fieldman for the American Shorthorn Breeders' Association, placed the Angus and Shorthorn classes, and Wallace Good of Kansas City distributed the Hereford awards.

The Shorthorns

Six herds of Shorthorns had entries in the various classes, but the principal competition was confined to the herds of Glide, Pacheco Cattle Company, and the Estate of Thomas B. Dibblee, all of which had met at the state fair. William Henn of Kansas City had a number of entries in the bull classes. F. L. Hall of Perris showed a few young things, and the University of California, showing in competition for the first time in a number of years, had one entry.

The two aged bulls were headed by Hallwood Flash, the massive roan from the Dibblee herd, that topped his class and was senior champion at Sacramento. Cumberland Goods, shown by Henn, lacked the scale and depth of the winner, but would be hard to stop in many shows.

For the first time the top two two year olds were rated differently. At this show Judge Brown preferred the scale and thickness of the roan Matchless Elite shown by Glide to the smoother covered, white Pacheco Marshall from the Pacheco herd. Henn was third with a red son of Scotch Lord.

The senior yearlings kept the rating given them at Sacramento, the white, Bashan Augusta, topping the Pacheco and Glide entries. He is narrowing the margin of thickness held over him at the state fair and continues to keep his smoothness.

The four senior calves had met before, but at Los Angeles the third prize calf at the state fair was placed at the top. The others stood in the original order. The winner is a very thick, soggy youngster and made a decidedly better showing than his first time out, his top showing much stronger.

A thick, good coated, evenly balanced roan, March junior, shown by the University of California, was sent to the top to be followed by the attractive white, Spicy Count of Glide's and the larger roan, Pacheco Barmpton. Hall was fourth with an attractive calf lacking the condition of those above him. The winner furnished the junior champion and reserve grand champion. The beautiful white, Spicy Lady, was alone in the aged class.

The two year olds conceded top place to Little Sweetheart, the remarkable heifer shown by Glide. Few females have sufficient class to take her measure as she would be a factor in any show. With rare character and sweet femininity, coupled with a conformation that borders on perfection, and fitted to the minute, she was quite the class of the show. Second place fell to Meadow View Village Girl shown by Dibblee. It will be recalled

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

THIS WEEK'S COVER

There were dozens of individual animals at the livestock show that would have graced our cover most acceptably. As the champion bull of the leading dairy breed at Los Angeles, the splendid bull from the famous Santa Anita Rancho was accorded whatever distinction may come from appearing on the cover page.

RAIN

Another rain has visited the southern end of the state with precipitation of from one-half to one inch south of Tehachapi. The storm extended into the San Joaquin Valley and plows are busy preparing for next season's crop.

GIVE HER MORE

We need good roads, for good roads will bring health and better living conditions and will increase our agricultural, industrial and commercial prosperity. Paved highways will give protection, pleasure, profit.

Californians are blessed beyond most other peoples.

ALGAROBA

We note in the Hawaiian Forester and Agriculturist a feed company advertising not only hay and grain, but "algaroba feed, a substitute for oats and rolled barley." We doubt not there are many groves of St. John's Bread scattered over the hillsides of the Hawaiian Islands and the peas and pods reduced to a meal become a valuable feed for the livestock of the islands. The hillsides of California will probably offer suggestion for utilization along this line.

AMERICANIZATION

Monday, October 27, was observed as Americanization Day. It was the birthday of Theodore Roosevelt and it was expected to be the closing day in the campaign for the Roosevelt memorial fund. The campaign, however, has been extended until sufficient funds are volunteered with which to establish a fitting memorial at Washington and a memorial park at Oyster Bay.

THE LARGEST UNIVERSITY

California has not yet arrived at the point where it can lay claim to having the largest university, although according to figures just compiled it now stands second in the list of the great universities of the country. Columbia is first, but California has a long lead over all others for second place. There are now registered in our great state institution 9,427 students. Nearly 9,000 of these are in the departments at Berkeley. Harvard, closest to California in numbers, has total registration of 4,369.

RED CROSS

The third roll call of the "greatest mother in the world" is now in full swing. This is not a campaign for a hundred millions in money, but for millions of members who will support the work of this organization which had such great place in the worlds war and will have equally great place in the world's peace. Almost every week there is call for help from this organization, and the fact that it has such great equipment enables it to accomplish much in the saving of human suffering where other organizations would fail. Let us not be slackers but support the Red Cross in peace.

SHOP EARLY

We recently called attention to the shortage of nursery stock and advised planters who wished to secure variety of fruits to order early. Now comes the information from the state horticultural commission that the total potato crop of the United States is reported extremely short, in fact, so short as to cause apprehension on the part of observers of food conditions. While it is some months before planting time it is none too early to secure supply of known high producing, disease free seed. Selection at harvest time is possible and will give greater satisfaction than taking whatever is offered at the last moment of the planting season.

ANDREW T. GAREY

Andrew T. Garey, horticulturist and son of a pioneer California horticulturist, passed away in Los Angeles, the city of his birth, on October 14, at the age of 65 years. Mr. Garey's father, Thomas A. Garey, whose death preceded that of the son by a few years only, was one of the earliest professional horticulturists and nurserymen in the south end of the state. It was he who recognized the value of a chance seedling lemon in the orchard of C. R. Workman in 1877 and propagated and distributed it under the name of Eureka, the leading lemon of today. Andrew T. Garey was associated with his father's business for nearly 40 years and was considered an authority on all matters pertaining to fruit trees and fruit culture. When still a young man he spent some time in Mexico superintending the budding of oranges and the planting of orchards. For six years, beginning in 1893, he was superintendent of the city parks of Los Angeles. Since that time to the day of his death he was a horticultural inspector in Los Angeles County, serving throughout the term of eight commissions and commissioners.

GROWING

We have received from Manager Erskine of the Fillmore Citrus Fruit Association an annual report for the year ending in August. It is largely taken up with table and other statements regarding gross prices, returns, etc., all of which will have most intense interest for members, for it has been a successful year.

But we turn to a bit of history which is chronicled under "Growth of the Association." The association was incorporated in 1897. In 1900 the manager wrote: "Our association is composed of 40 or 50 orange and lemon growers. We own our own picking house at Fillmore, built last fall at a cost of over $1500. Last year the association handled about 16 cars of fruit." Nearly a score of years has passed and the association still lives and the cooperative spirit has grown every year. Gone is the grader in the "new house," "power for which was furnished by H. M. Walker, director and secretary" who worked the machine with his feet while he sorted fruit and pondered over his duties as director and secretary. The little old building has gone and a far different structure covering about two and a quarter acres, costing over $50,000 and with capacity of ten cars daily, is now required to handle the business of the association. When Chas. Dreher was manager in 1900 he had occasion to call attention of one of the growers to his carelessness in delivering fruit because his team "was driven at a trot" while bringing fruit to the packing house. Not only the packing house, but the roads. have changed, and the motor truck today brings in the fruit "at a trot."

And Fillmore is one of the smaller associations which cooperation has brought together in California.

SHOW WORTH WHILE

November first is an important date. Today there opens in San Francisco the first California International Livestock Show, a show "dedicated to the proposition that the Pacific Coast is America's great breeding ground for improved livestock and the world should know it."

The San Francisco show following closely the Los Angeles Livestock Show and preceding by a week the Pacific International Livestock Exposition at Portland, is the middle link in a chain of shows that are destined to write large the fame of this coast region. That California should sponsor two important shows can be taken as indicative of the important part animal husbandry is coming to play in the development of this state.

The name "California" used in connection with many products has come to have a high significance. That some day the term "California bred" will be associated with the highest type of improved livestock we have greatest confidence.

The San Francisco show has been fortunate in having at its helm a man who believes devoutly in the future of the West, a man who has done as much as any other man to prove the possibilities of California, a man whose faith gave him courage to invade "unheralded and unsung" the greatest livestock show in the world and who brought back the highest honors of that great show, and a man whose untiring efforts made the California International Livestock Show a fact—Gordon H. True of the animal husbandry department, University of California.

In the establishment of the show, True has been accorded the support of the business interests of San Francisco, the breeders and the press. He deserves the further support of the public. The show is planned to inspire, encourage and educate those who have not learned the full importance and economic necessity of a broader agriculture predicated on livestock.

No California farmer should fail to spend a few days at San Francisco.

SCORED A SUCCESS

The first exclusive livestock show ever held in California is now history and is listed under the heading of "Successes."

Whether or not the initial show made money or paid out is a matter of slight importance—there are values not to be measured in dollars and cents, and to attempt to gage the success of the Los Angeles Livestock Show in terms of money would evidence a complete failure to appreciate the motive that brought that show to a fact.

The show was initiated by those interests of vision that realized the stimulating influence such a show would have upon the livestock industry of the South and the part it would play in bringing about a closer interest between the country and the city, the producer and the consumer.

That the show served its purpose well is attested by the large and interested crowds and the fact that the board of directors, the men responsible for the show, voted unanimously that the Los Angeles Livestock Show should become a permanent affair and declared for a greater exhibit in 1920 In the years to come, when the cattle, sheep and hogs of Southern California show the refining influence of better breeding; when the livestock producers have placed their operations on a more profitable basis, when the entire community comes to regard the industry fundamental to a substantial agriculture; when the fertility of the valleys and the hills is increased, then will it be time to check over the results and decide whether or not the show just closed was a success and worth the effort.

There is another angle of the question. Aside from the economic importance to a community of better livestock, nothing is more certain than that contact with well bred animals tends to develop a better citizenship.

Our congratulations to the men responsible for the establishment of the show—the management and the exhibitors—and our sincere and hearty best wishes for the shows of the future.

The New Fumigation

By Ernest Braunton

THERE is nothing mysterious about the new liquid hydrocyanic acid. In the manufacturing plant the gas is generated in the same manner as it always has been, with "cyanide, sulphuric and water." It is then run through condensing pipes bathed with brine from the refrigerator plant and transformed to a liquid. As this contains considerable water it is distilled, the water separated and out comes the acid 96 per cent pure, being really prussic acid, less than three-fourths as heavy as water.

It is a colorless fluid and so innocent of harm that the writer dipped his hand in it as it flowed from the tank into the final container or drum. It is harmless to the flesh if one has no cuts, but the gas arising from the wet hand might easily overcome the handler or a bystander. The danger comes when a considerable surface is exposed so that gas is given off in great volume. For this reason it is forced under the fumigating tents through spray nozzles and is instantaneously gas. The gas is inflammable and fire must be kept away from it. Safety lies in keeping the liquid in a solid body at low temperature, and greatest danger comes from vaporizing with heat.

Now this liquid hydrocyanic acid is not a new thing. It has been known to chemists for many years. It is the practical use of it that is new and it has already revolutionized fumigation practice. The discovery of its present use was as simple as its manufacture. It all came about accidentally and its value was at once recognized by William Dingle of the firm of Dingle Bros., both members being experienced fumigators. William Dingle was fumigating a few orange trees he could not closely approach and was forcing gas through 100 feet of garden hose. When through he dropped the loose end into a barrel of water and "just for devilment" turned on a little gas to see what it would do. As it did nothing he went home, and the next morning on handling the hose noticed some water running out that smelled very strongly of gas. This he ran into a couple of small bottles and took to a chemist for analysis. The chemist told him it was hydrocyanic acid and a dangerous material to handle. That is the simple tale of its discovery as related to the writer by Mr. Dingle while on a visit to Dingle Bros.' plant at Azusa.

At this plant the liquid is manufactured as herein related, cooled after distillation and run away to the reservoir tank, from which it is drawn off into drums of 15 gallons capacity, and you haul it away to your orchard. They handle it just like water. The acid runs through a hose dropped into the bung of the drum, the filler merely keeping his nose away from the fumes and screwing the cap on when the drum is filled. All handling is done in the shade and wet cloths are kept over the reservoir tank to keep the stuff cool, being kept wet by a perforated overhead pipe. All handlers of the drums should aim to keep them cool. To allow for heat expansion these drums lack a half gallon or more of being full. But at 96-97 per cent pure it is entirely safe to handle. At 99 per cent pure it would be too dangerous to handle. As it is railroads cannot ship the acid, for if a wreck should occur and the drums be broken the gas would spread even into adjacent buildings and kill all who inhaled it. Yet in the three years of manufacture there have been but two fatalities, both at generating plants. All transportation is by auto trucks, though nearby orchardists haul their own supply, sometimes a single tank, in the family runabout.

Other uses than in orchards are found for it, but in orchard use it is far more effective and economical than the former gas method. The saving in tents alone is an important factor, for the liquid gas will not harm the finest fabric. To the orchardist it is a source of satisfaction in that he is not burdened with the disposal of residue from generation as under the old gas method. Used for dwelling house fumigation it will not corrode or tarnish nickel and brass. For greenhouse fumigation it is ideal. It is thought that in a diluted form it might be used for sterilization of soils. But it is for orchard fumigation that it is most important, providing a more effective fumigation at lower cost, for much labor is saved under the liquid generating process.

National Federation of Farm Bureaus

California Organizes and Elects Delegates

TWENTY-FIVE of California's 30 farm bureaus have become charter members of the state federation. Some months ago at a conference held in Berkeley, which was followed by a trip almost the length of the state, participated in by farm bureau presidents and farm advisers, together with other delegates, there was begun the organization of a state bureau. This was done by appointing committeemen who have reported a form of constitution and by-laws which was accepted by the recent Berkeley meeting. Officers chosen to conduct the affairs of the new organization are: President, Dr. J. H. Walker, Willows; vice president, J. K. Macomber, Tulare County; delegates to the Chicago conference, at which it is expected a national organization will be perfected, are: Dr. J. H. Walker, Volney H. Craig, Los Angeles County; G. H. Sawyer, Stanislaus County.

The home demonstration work delegates, of which there were an even dozen with one specialist in attendance, held sessions at the same time as the general conference. Reports were made of the work in the various counties.

American Federation

The best statement regarding the national federation is given by its constitution, the first four articles of which are:

Article I—Name

The name of this organization shall be the American Farm Bureau Federation.

Article II—Objects

The objects of this organization shall be to correlate and strengthen the work of the state federation of farm bureaus, to represent and protect the business and economic interests of agriculture and to represent the farmers of the whole nation.

Article III—Membership

Sec. 1. The membership of this organization shall consist of state farm bureau federations and state agricultural associations based on the farm bureau plan when approved by the executive committee of this organization.

Sec. 2. All applicants for membership shall submit to the executive committee a copy of their constitution and by-laws.

Sec. 3. Any member may withdraw in good order from the American Farm Bureau Federation by presenting to the secretary a written resignation, provided that all dues are paid to date of withdrawal.

Article IV—Membership

The governing body of the organization shall be composed of a board of directors selected by each of their respective state federations which shall meet once a year. Each state organization qualifying for membership shall be entitled to one director and an additional director for every ten thousand or major portion thereof, of paid-up members in the county farm bureaus affiliated with the state organization.

The office of the federal organization, or rather the organization to be, sends out a statement from which we quote:

"This new farmers association, which is planned to cover the entire United States and represent agriculture in a more comprehensive way than ever before, will be financed and controlled entirely by the farmers themselves. It will be a federation of the various state associations which are in turn based on the county farm bureaus.

"There are at this time 23 such state federations organized. It is thought that nearly all these state associations, representing at least 225,000 of the 450,000 of the farm bureau members in the United States, will come in as charter members. An active campaign will be planned at the November meeting to organize the other states of the Union.

"The national federation will be financed, according to the tentative constitution, by a membership fee of ten cents from each individual farm bureau member for the first year, 25 cents the second and 50 cents the third. The suggested membership fee for the first year was purposely kept low in order that the newly organized states, many of which are as yet poorly financed, may not be kept out.

"The federation will not lack for funds the first year, however, if the plans of the organization committee are carried out. These plans call for a guarantee fund of close to $200,000 a year. As much of this amount as may be needed will be used to carry on the work on a big scale from the start, until the amount of money coming in from dues becomes sufficient for that purpose.

"Each state will be asked to secure pledges to the guarantee fund to the amount of $300 a year for three years for each county farm bureau affiliated with the state federation.

"Keynote addresses at the Chicago meeting, November 12 and 13, outlining the objects and purposes of the new national association, will be made the morning of November 12 by Harvey J. Sconce, of Illinois; S. L. Strivings, of New York and J. R. Howard, of Iowa. This will be followed by a report of the organization committee, adoption of a constitution, a general discussion of the work of the national federation and election of officers. Each state will have one vote at this organization meeting, but may send as many delegates as desired."

"I have great faith in the future of this new association," said Chairman O. E. Bradfute. "The fact that it is based on the county farm bureau means that it will be a solid, substantial, representative organization composed of the best farmers in the United States. The launching of this association at Chicago in November will be a great day for American agriculture."

POTATO GROWERS' TRIP

On next Monday, November 3, potato growers of Southern California are invited to join the trip planned by the Los Angeles County farm bureau. Start will be made from the McSweeney ranch on the road from Los Angeles to El Monte. Stanley S. Rogers of the state university; H. A. Hyde, potato seed specialist of Santa Cruz County; H. J. Ryan of the Los Angeles County horticultural commission; D. B. Mackie of the state department; D. G. Milbrath, plant disease specialist; Geo. Peters, and others will join in the program which will be held at various points during the all day trip. After an informal meeting on the McSweeney ranch and trips to near by potato sections, lunch will be served at El Monte, after which the entire conference will take a trip to San Fernando Valley, where on the Radcliff place near Burbank a short program will be held at 1:30. Other potato growing sections of the San Fernando Valley will be visited.

FARM BUREAU ANNUAL

The annual meeting and conference of the Los Angeles County farm bureau will be held in one of the groves of the Santa Anita ranch east of Pasadena, Wednesday, November 5. A short morning session will be held about 11 o'clock. At noon there will be basket lunch with hot coffee and doughnuts furnished by the home demonstration division, after which there will be stock judging, general talks and addresses. Addresses will be made by the state leader, B. H. Crocheron, and President Volney Craig, who will give report of the work of organization of the state farm bureau, also the work hoped to be accomplished by the organization of the national association. Other addresses will be made by Senator Cogswell, Carlyle Thorpe, G. Harold Powell and others.

Agricultural News Notes of the Pacific Coast

Northern California

Tehama County has a cucumber farm.

Next year Chico will have one hop ranch of 992 acres.

Cloverdale has shipped 30 cars of wine grapes to date.

Sacramento Valley hops have been sold for 77 cents a pound.

Sonoma County will have a total of 19,000 tons of dried prunes.

Yuba and Sutter Counties have shipped 5,000 tons of raisins.

Lodi Tokay grapes sold last week for the high price of $2,918 a car.

Japanese ranchers near Marysville grew 45 sacks of rice to the acre.

A 356 acre alfalfa ranch near Redding, Shasta County, sold for $140,000.

The 992 acre Fraser hop ranch in Butte County sold recently for $300,000.

Vacaville has shipped 100 more cars of fruit than up to same date last year.

Winesap apple trees at Sonora now 50 years old bore 25 boxes each this year.

Milk in San Francisco has been raised to 15 cents a quart or ten cents a pint.

A large walnut crop is being harvested near Sycamore in Colusa County.

Three new townsites are to be laid out in Sutter County this coming spring.

The big new rice mill at Colusa started on October 25. Capacity 6,000 bags daily.

A new rice thresher operating near Chico turned out 220 sacks of rice in 40 minutes.

The Spreckels Sugar Company has leased 2,000 acres near Yuba City for sugar beets.

A large acreage of broom corn is being harvested around Biggs, in Butte County.

E. C. Horst, Sacramento Valley hop grower, has several thousand acres in the bloomin' 'ops.

In the Haywards district 150 tons of apricots were dried and brought 30 cents a pound.

From 49 acres on the Adams ranch near Woodland, Yolo County, $60,000 worth of tobacco was taken.

The warehouse of the Oakdale, Sacramento County, Almond Growers Association was destroyed by fire October 14.

Because of shortage of cars the Earl Fruit Company has brought suit at Sacramento against the railroads for $123,921.

The San Francisco District Federation of Women's Clubs has endorsed a move to secure a national park in the redwood district of Mendocino County.

Two hundred acres of wild land near Yuba City sold last week for $100,000, the highest price for uncultivated land ever reached in Sutter County.

Ukiah business men state the Indians in that part of the state have been deprived of their best lands, have no tools or equipment and are on the verge of starvation.

Central California

A milk powder factory to cost $100,000 is to be erected at Modesto.

The citrus growers of Tulare County are forming a protective league.

There are six grape syrup factories now in operation in Central California.

The granite quarries at Madera, closed by a strike, are once more in full swing.

In December Modesto will vote on a $400,000 bond issue for civic improvements.

At a recent sale of a livery stable at Lodi 15 horses sold at an average price of $15.

A successful grape syrup factory is in operation at Woodbridge, San Joaquin County.

The Pacific Rice Growers Association has refused $5.36 a hundred for the 1919 crop.

The grain elevator at Chowchilla, Madera County, was destroyed by fire on October 12.

Fresno estimates its loss from car shortage to be $3,000,000, and for the state $8,000,000.

F. C. Ensign of Terra Bella, Tulare County, sold his Manzanillo olives for $200 orchard run.

There is a marked shortage of grape cuttings at Bakersfield, and none of Thompson Seedless.

Eight creameries of Kings County paid their patrons over $355,000 for butter fat in September.

An apple grower at Three Rivers, Tulare County, sold his crop from seven acres for $1960, or $280 an acre.

A. P. Stone of Denair, near Turlock, has a pumpkin weighing 180 pounds, and seven feet in circumference.

A jury of 12 women at Hanford tried a Chinaman for conducting a gambling house. Of course he was guilty.

M. A. Boulware of Terra Bella, Tulare County, picked eight boxes a tree from his eight year old Valencia orchard.

Kelseyville reports a garden growth of nutmeg trees, but these trees are strictly tropical in their requirements.

Pleyto in Monterey County has a sunflower more than 12 feet high with a flower four feet in circumference.

At the Poland China sale at the Marsh ranch near Modesto, 60 head brought about $10,000, averaging over $160 each.

The owners of the new eucalyptus mill at Pixley have bought an 800 acre grove of eucalyptus trees from J. J. Kelly.

A grape grower at Stockton was fined $75 for shipping grapes of which more than 10 per cent was infested with insects.

The California Packing Corporation will erect at Isleton, on the Sacramento River, what will be the biggest asparagus cannery in the world.

Farm bureau auction sales will be held in Kern County as follows: Wasco, November 1; McFarland, 8; Bakersfield, 15; Wasco, December 6; McFarland, 13; Bakersfield, 20.

Southern California

Brawley has a strike of cotton pickers.

Santa Ana, Orange and Tustin are talking of consolidation.

The ridge route through the Tehachapi will be open November 10.

Navels at Pomona will be ready for picking the first week in December.

Imperial County is paying a bounty of ten cents each for gopher scalps.

Ontario claims the largest quince ranch, with 25 acres of bearing trees.

The big sugar factory at Oxnard closed on October 25, after a 78 day run.

W. T. Thompson of Riverside has grown 10,500 cases of sweet Spanish onions.

B. F. Thorpe of Covina purchased a 20 acre addition to his home orchard for $50,000.

A new artesian well in the Camarillo section of Ventura County has an 80 inch flow.

Short staple cotton is bringing 38-39 cents in Brawley; Durango cotton brings 42-43 cents.

The 80 acre tract in West Highlands, known as the Army tract, sold last week for $80,000.

Corona reports that a much larger acreage about there will be planted to sugar beets next year.

An electric evaporating machine has been installed in a raisin packing house at Cucamonga.

One car of walnuts shipped from Pomona last week was valued at $10,000 and another at $9,200.

Ten acres of 11 year old Valencias and lemons sold at Whittier for $60,000, said to be a record price.

Fifty acres of rice near Buttonwillow, Kern County, is being harvested, the first grown in that district.

The Hemet-San Jacinto Growers' cannery handled 2,737 tons of apricots as against 1,604 last year.

The Cucamonga Fruit Growers' Association shipped 32,330 boxes of citrus fruits during the past year.

Arlington, Riverside County, has a sugar cane field of 35 acres from which 7,000 gallons of molasses is expected.

The new Calvada date packing house at Coachella, with a season capacity of 50,000 pounds, is now in operation.

Thirty head of pure bred dairy stock from Wisconsin arrived at Bishop last week. The majority were registered Holsteins.

The Riverside Beekeepers' Club offers a reward of $25 for the arrest and conviction of anyone setting fire to a bee range.

The 30 acre Dungan orchard at Garden Grove sold for $75,000. Fourteen acres were in Valencias and 14 in walnuts.

On the Patterson ranch near Oxnard, Ventura County, some sugar beets run as high as 16 tons to the acre and up to 22 per cent of sugar.

Sorghum mills are now operating at Buena Park, Riverside, Bakersfield, Pomona and in various other parts of the state. Manager H. W. Hall of the Pomona plant informs us that that mill has a capacity of about 10,000 gallons this season.

The Coast and General

The apple crop of Idaho will total 4000 cars.

The Yakima Valley, Washington, will ship a total of 8,500 cars of apples.

Joseph Morrier, of the Yakima Valley, sold ten tons of hops for 60 cents, a total of $12,000.

Rainfall over the stock range section of Arizona in September was the heaviest in 22 years.

Forty-five carloads of grapes were shipped this year from the Yakima Valley, Washington.

George Watt of Klamath Falls, Oregon, recently purchased the 1,480 acre Cox ranch for $100,000.

The Dalles, Oregon, authorities have a heavy battle on with the destructive elm tree beetle.

Fruit product plants in Oregon are paying $15 a ton for apples which do not grade for commercial packing.

Knud Knudson, Chandler, Arizona, bought 45 acres for $500 an acre. Four years ago it sold for $100 an acre.

Five land purchasers at Hood River, Oregon, will put in 90 acres of strawberries this coming spring.

T. L. McCutcheon sold cotton to the Globe Oil Co., Yuma, Arizona for 44 cents, a record price for this season.

There are more than 50 schools in each of several counties in Washington without teachers and no applications filed.

The Walla Walla, Washington, Commercial Club seeks to place a farm name over the gate of every farm in the county.

The cannery of the Eugene Growers Association at Eugene, Oregon, is canning apple cider to the extent of 10,000 gallons.

The total value of the prune crop in Clarke County, Washington, for the present season is estimated at more than $2,000,000.

The Washington Cooperative Egg and Poultry Association, recently organized, has 511 members. Headquarters at Seattle.

A crop of 55 pounds of honey was the average from 1100 hives near Yakima, Washington. It sold for 20 cents, or $12,000.

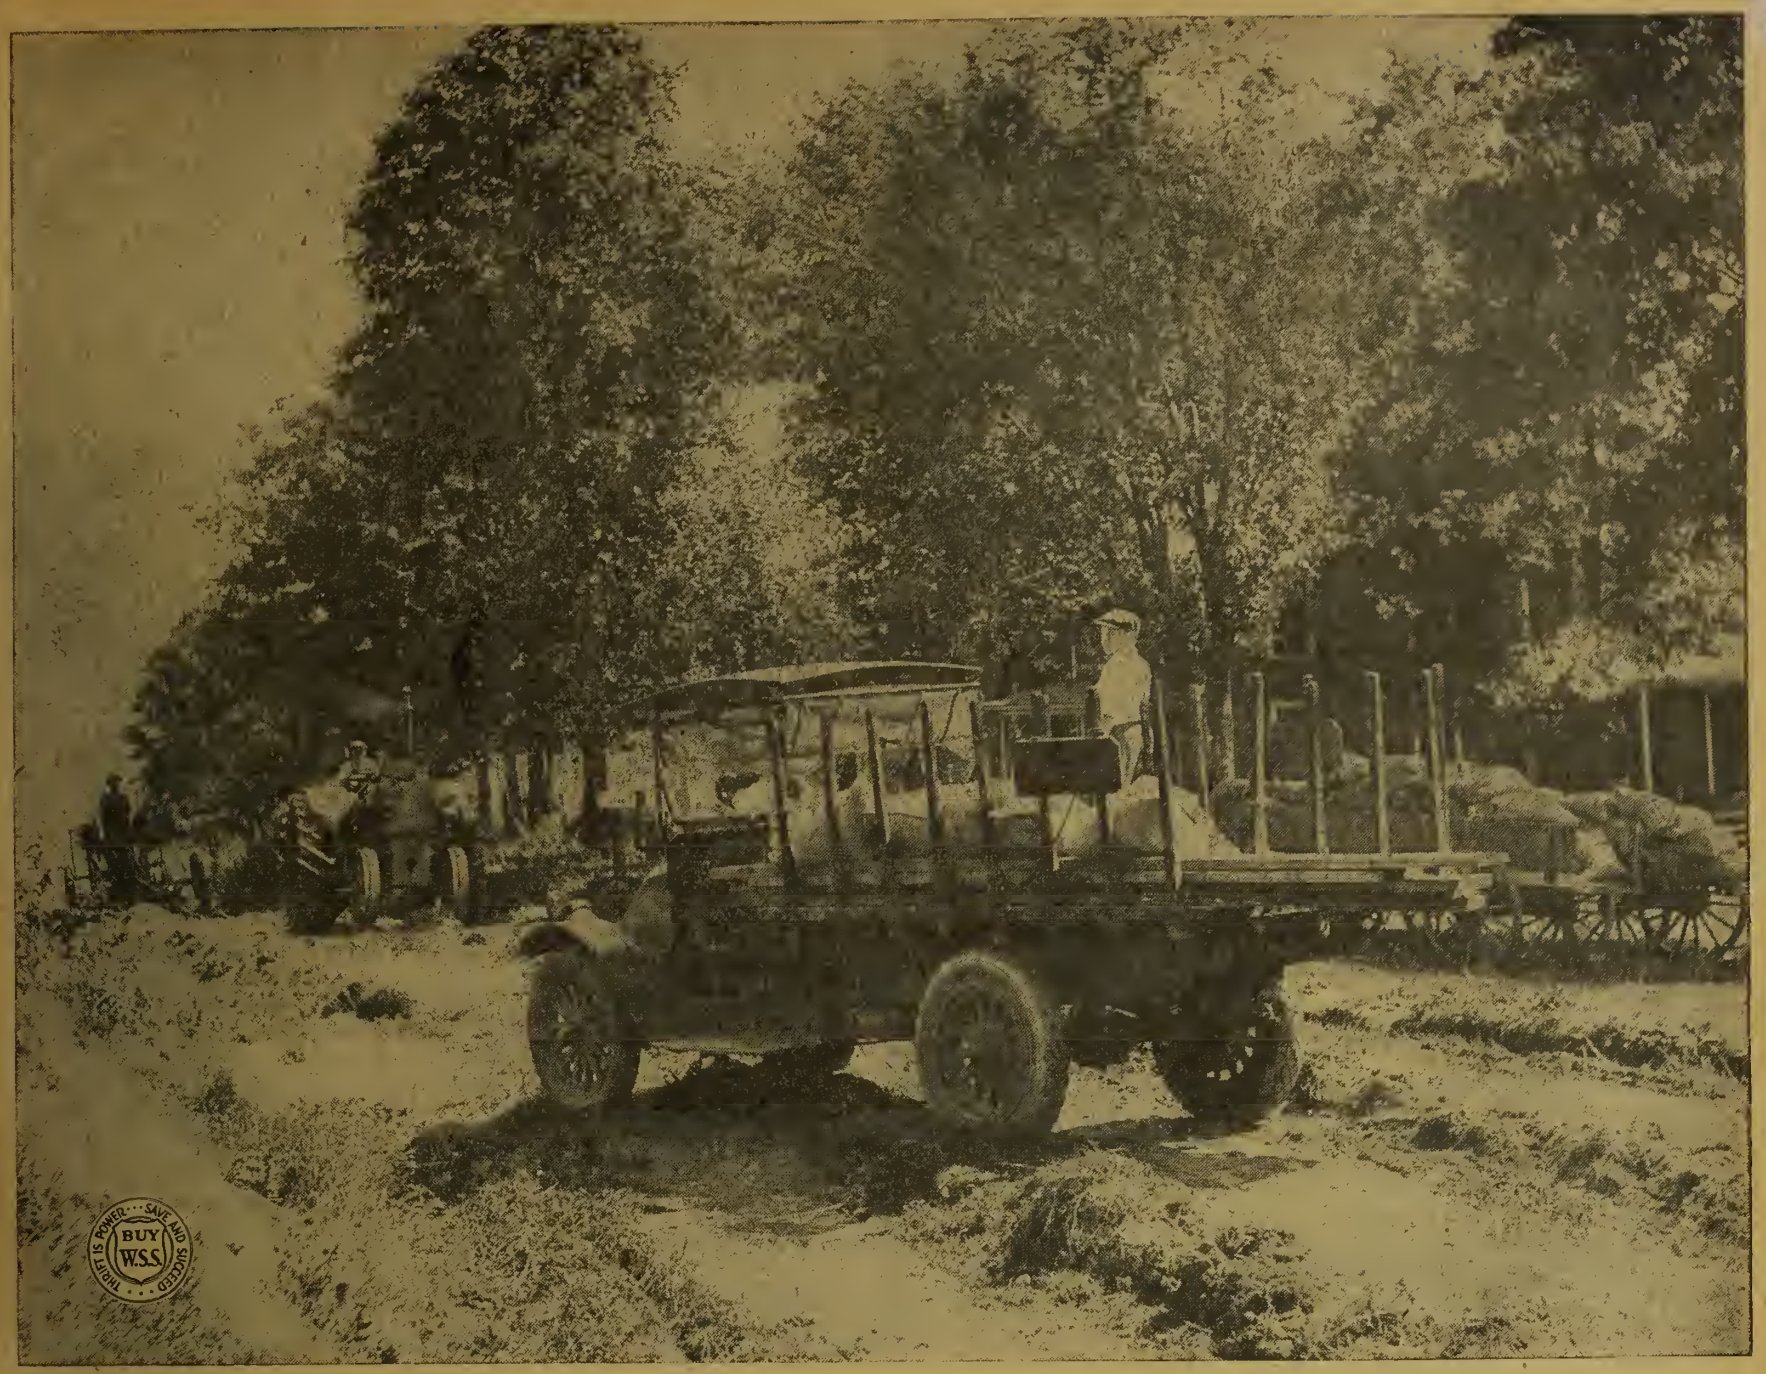
The Buster Brown orchard in the Wenatchee Valley, Washington, has installed a moving picture theater for its 210 employes.

The Oregon hop crop this year is only one-third as large as it was before the war, or 40,000 bales. Present price is 53 cents a pound.

P. T. Briggs, Nehalem, Oregon, has a Durco-Jersey sow that bore three litters of pigs last year and three this year, a total of 76, and not one was lost.

The Spanish Valencia orange crop is but two-thirds of normal, said to be due to lack of fertilizer supplies on account of the war. No oranges were shipped to the United States.

In spite of the fact that the number of dairy cows in the Salt River Valley of Arizona is considerably less than a year ago, owing to the large acreage in long staple cotton, a new creamery is being established in Phoenix.



"MY use of Goodyear Cord Pneumatic Truck Tires shows me that pneumatics not only travel better on our clay roads but also are better for the roads. Solids have a hard time in the soft ruts and they are hard on the roads. I have observed that others here are taking note of this."—A. J. Emmerton, Farmer. Bloomer, Wisconsin

THERE is scarcely any work done on the Emmerton Farm, near Bloomer, Wisconsin, that is not aided directly or indirectly by a motor truck on Goodyear Cord Pneumatic Truck Tires.

Their traction enables this truck to haul fertilizer over plowed ground, to carry feed to livestock wherever located, to deliver oil to tractors and to distribute fencing.

For the same reason the truck easily transfers corn from binder to silo filler and grain from separator to bins—all off-the-road work.

Mr. Emmerton's experience, however, equally emphasizes the advantage of the Goodyear Cords over solid tires on the local clay roads, noting that the pneumatic-shod truck overcomes conditions impassable to solid-tired trucks.

Still another important significance attaches to his statement that the pneumatics are regarded with growing favor in the surrounding community because their cushioning action saves roads.

It prompts the observation that this particular virtue of the pioneer Goodyear Cord Pneumatic Truck Tires also is a factor in their rapid and broadcast rural adoption.

TREE PLANTERS

The Fancher Creek Nurseries have played an important part in the production of fruit in this State. For 35 years we have made it our business to grow "True Trees," vigorous trees, well-rooted trees, trees that would bear.

Thousands of fruit growers owe their success to the fact that they planted "Fancher Creek" trees.

A SUGGESTION

A larger acreage should be planted to Nectarines. They are fine for either drying or shipping.

Tropical Fruits in California

By Ernest Braunton

THE term "tropical fruits," is often a misnomer so far as the hardiness of plants is concerned, for we grow plants from well within the tropics that are yearly visited by frosts on their native heath. Even at the equator frost forms at an elevation of 18,000 feet, while in some of the Hawaiian group, frost is found at a little more than 4,000 feet. So that it is possible to obtain plants from the tropic zone that are subject at all seasons to a lower temperature than prevails throughout California.

Many of our so-called tropical fruits grow on mountainsides or in mountain valleys, and in tropic lands the temperature drops four degrees with every 1,000 feet of elevation. Bogota, Colombia, has the most uniform climate of any city in the world, the average daily temperature being 60 degrees Fahrenheit throughout the year. The Feijoa Sellowiana was sent to us as a tropical fruit, yet it is hardy in Oregon. The best Guatemalan avocados occur at 6,000 feet, and that is the reason these fruits thrive so well in California. The strawberry guava is perfectly hardy here, though native to Brazil, and the Mexican white sapote is another example of a hardy tropical fruit.

So let us lay aside our fears and suspicions when the term tropical fruits is used, for many of them are as hardy as our native live oak. Even the olive is considered a tropical fruit. In California we have at all times some tropical fruit that is high in popular favor until it becomes well established, after which the public becomes eager for a new fad. Just at present the avocado is most in popular favor, and the writer believes it will be followed by the mango. The avocado is now firmly established as a commercial fruit, and hundreds of acres are just coming into bearing in the south end of the state. No one has yet planted a mango orchard, but when we find what are the hardiest varieties, a large acreage will be planted to them. Many regard the mango as next in importance after the banana and pineapple. Others consider the mango the finest of all tropical fruits, but there is a great range in flavor and texture. Some are tough and fibrous with a flavor strongly turpentine, while others are delicately tender and of a flavor unexcelled. More than 500 varieties have been listed in India alone.

Coconuts, pineapples and bananas are crops that will never be grown in commercial quantities in California. The two latter have fruited freely in many sections, but none of the fruits were of market value. It is possible that papayas may be grown in favored spots, but it is quite doubtful if they would prove good enough for market. It is certain we shall eventually have more guavas, even if we have to produce hybrids with the more common one. The custard apple or cherimoya has been sparingly grown in California for a half century, but is still rare for the reason that the best varieties have not been propagated by budding and many of the seedlings are very poor in flavor. The best are nothing short of luscious. A great future is in store for the eugenias, of which we grow many edible species, and some of these are much prized by their owners. Two passion fruits are grown here, of which many people are fond. The writer has eaten a half dozen large fruits at one time and relished them very much. The carissas in two or three species are sure to be extensively planted when once their excellence becomes a matter of common knowledge. The jujubes are firmly established in all parts of the state though as yet little known. The pistachio and Queensland nuts are two whose popularity steadily advances, and these are but a few of a great number of so-called tropical fruits that will one day become common in California.

Other Things Tropical

Matay or Paraguay tea is a common beverage in South America, Brazil alone exporting 150,000,000 pounds annually to Argentina. The writer has bought it in Los Angeles and likes is very well. The leaves are from a holly which is hardy in the warmer parts of California. The chayote is becoming widely known and extensively planted and may now be found in all vegetable markets. The udo, dasheen and taro have not yet been recognized commercially though somewhat planted for private use.

For a score of years the writer has advised planting the New Zealand flax for fiber, and it is gratifying to learn that a small acreage has been planted in California. In its native county it grows right down to the ocean spray, though extending far inland. A few years ago fine mature plants of the sisal hemp, a species of century plant, were growing in Elysian Park, Los Angeles, proving beyond a doubt that this valuable fiber plant will thrive in the warmer parts of the state. They were as large and robust as those pictured on tropical plantations. Roselle, a species of hibiscus, the calyces of which are used for jelly, has been planted in California for a score of years, but is only now becoming common. In Egypt the well known historic papyrus is being harvested for paper making and it may yet be planted in local swamp lands now valueless or we many even grow the favored Chinese rice paper plant commercially, for it makes the finest of paper. Nothing is more certain than that bamboo will be grown in large plantations in a few years. In a few spots in the state there are already plantations that cover a few acres. No plant may be put to a greater variety of uses, and of late years the tender tips, imported in cans from China and Japan, have been served in our best hotels, being preferred by many to asparagus. More than a score of species are grown throughout the state and all have proven vigorous. The bamboo has a bright future in California.

THE COMMERCIAL PEAR CROP OF THE UNITED STATES

The October estimate of the commercial pear crop for the United States, made by the bureau of crop estimates through its fruit crop specialists, indicates an increase of about 175,000 bushels over the September 1 estimate. The crop in California remains the same as last month, but the crops in Illinois and New York have shown an increase of about 20 per cent. Delaware on the other hand has declined about ten points. The crop of Bartletts in most of the important Bartlett producing sections turned out to be nearly a full crop. Kieffers are very short, particularly in Delaware, New Jersey, Michigan, Illinois and the upper Hudson Valley.

The crop for the United States is estimated at 8,601,000 bushels, or more than 1,000,000 bushels over the crop of last year. California produces practically one-half the entire output of the country, or, to be more exact, her output this year will be 4,272,000 bushels. The only other large pear producing state is Washington with 1,600,000 bushels.

ARGENTINE SUGAR

Word comes through the United States consul at Buenos Aires that the absence of frosts has brought the present sugar crop up to a high figure and that there will be a surplus over what is necessary for home consumption until the next crop is available, of 80,000 to 90,000 tons. This outlook led to a decided drop in sugar prices in all classes at Buenos Aires. Refined sugar in bags dropped from $3.18 to $2.75 in a few days and other grades dropped as suddenly. This drop was really caused by the government prohibition of exportation, though all the world is short of sugar. No relief is in sight until Cuban sugar comes on the market in December.

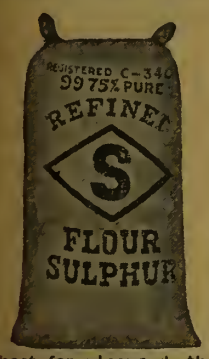
GOOD FOR NEB

Old Nebuchadnezzar, they tell,
Ate grass like a dumb anlmell;
When he struck a thistle
It made the king whistle;
But he beat out the h. c. of l.
—Houston Chronicle.

Let Eagle Lye Guard Your Home

Make your home a safe place to live in; make it free from disease-breeding germs. Buy a can of Eagle Lye from your grocer; it costs only fifteen cents and if you follow the simple directions on the can it will guard your home and keep it free from germs. Try it.

SULPHUR



It has been proven and so recommended by the University of California that if you sulphur your grape vines and orchards SIX times they will not be affected by MILDEW or RED SPIDERS.

ANCHOR Brand Velvet Flowers of sulphur, also EAGLE Brand, Fleur de Soufre, packed in double sacks, are the fluffiest and PUREST sulphur that money can buy; the best for vineyard, the best for bleaching purposes, LEAVING NO ASH.

VENTILATED sublimed Sulphur—Impalpable Powder, 100 per cent pure, in double sacks, for Dry Dusting and making Paste Sulphur.

For LIME-SULPHUR SOLUTION, use our DIAMOND "S" BRAND REFINED FLOUR SULPHUR. We can furnish you this sulphur at such a low price that it would pay you to mix your own solution and net you a profit equal to the amount paid out for labor in spraying your orchard, even if you pay your men $4 per day for making the solution and applying same.

To create additional available plant food, drill into the soil 100 to 400 pounds per acre DIAMOND "S" BRAND POWDERED SULPHUR 100 per cent pure. This has increased various crops up to 500 per cent.

Also PREPARED DRY DUSTING MATERIALS, Tobacco Dust, Dusting Sulphur Mixtures, etc.

And "Anchor" Brand Standard LIME-SULPHUR SOLUTION 33 DEGREES BE., Fungicides and Insecticides.

Carried in stock and mixed to order.

San Francisco Sulphur Co.

624 California Street. San Francisco, Calif.

We are equipped to make immediate shipments. Send for "ILLUSTRATED BOOKLET," also booklet "NEW USES FOR SULPHUR", Price List, and Samples.

Please state for what purpose you use the sulphur, quantity needed, and date of shipment preferred.

THIS MONTH IN ORNAMENTAL GARDEN IN NORTHERN CALIFORNIA

By A. R. Gould

THE rainfall last month, although slight, has helped the lawns wonderfully. They are showing new life and the wonderful green color is returning. Arrange all planting schemes according to carefully studied plans and start in at once to prepare the ground. It will soon be time to fill vacancies in the groups of shrubbery or add to the collections already on hand. Some contrive to make their collections of flowering shrubs, roses etc. as complete as possible with those most suited to the locality, and with that end in view it will soon be time to survey the lists from the nurseryman. We hope next month to give a few selections which might prove helpful to those desiring to make more extensive plantings. The leaf soil heap can this month also be added to with considerable advantage. Leaves and all such refuse from the garden should be collected and stacked in a heap to rot into the finest and richest soil of its kind, and which will be worth money to the grower. We may expect severe weather during the coming weeks, hence it will not be possible, except under glass with heat, to raise any tender plants. However, there are many hardy subjects we can give our attention to which will brighten our gardens through winter and spring.

All tender water lilies should be removed from the pools and stored in a protected place for the winter, and dahlia tubers, begonias (tuberoses), etc., should also be dug up and stored in sand for the winter, care being taken to label them for color and type. Keep them in a dark dry place. Seed of annuals and perennials should be collected, and among these we might mention linnias, gaillardia, delphinium, hollyhocks, marigolds, cosmos. asters, stocks, etc. Seed of dahlias and gladiolus may also be secured now. Propagation by cuttings of roses, hydrangeas, etc., may be carried on and most perennials increased by root division.

Gladiolus

The summer flowering types being past, only the dry flower stalk remains, and after the seed has been taken out the stalk can be cut down and the bulbs may either remain in for another season or be dug up and stored. Seed of those types recently mentioned may be sown now in shallow boxes of rich soil, and they will in a year or two produce fine flowers. Now is the time to plant the early flowering types which bloom in May, and among the best are the Bride, pure white; Peach Blossom, pale rose, and Ne Plus Ultra, large rosy red. These look effective planted in groups. Plant one and one-half inches deep and two to three inches apart.

Iris

These popular hardy flowers are to be had in many shades, ranging from yellow and white to deep purple and lavender, and they may be planted three inches deep and nine inches apart in groups of solid colors or they may be planted in the wild garden under the trees or as an edging to the garden paths under the pergola. The following are some of the varieties we can recommend: Isolene, Caterina, Black Prince, Blue Jay, Fairy, Honorabilis, Darlus, Lohengrin, Madame Chereau, Queen of May, Pallida Dalmatica. These range in height from 18 inches to two feet. Iris gigantea, producing creamy white and orange yellow flowers, grows four feet high and flowers in May. This should be in every garden; also Iris Foetidissima, the open seed pods of which are very attractive, having bright red berries.

Liliums

These are wonderful in form and color, and most of the species are from Japan, hence they are popularly called Japanese lilies. However, we can boast of one or two, as they are natives of California. Lilium tigrinum is an example. The following is a good selection and should be ordered at once for early delivery: L. Krameri, pink, very fragrant; L. auratum, golden rayed lily; L. rubrum magnificum; L. speciosum album; L. candidum, Madonna lily; L. giganteum, Easter lily. These may be planted in five inch pots of rich soil or in the garden eight inches apart and four inches deep. They may be planted between shrubbery such as rhododendrons.

Ranunculus

These charming flowers grow about ten inches high and are grown from small tubers which should be planted one inch deep and six inches apart. They may also be raised from seed sown in boxes of light soil. The best varieties are Merveilleuse, Romano and Seraphique, in colors of yellow and scarlet.

Spring Flowering Subjects

Plant out alyssum saxatile, aubretia, pansy, viola, myosotis, bellis perennis, violet, wallflower, primula.

Place Your Order NOW *for* Nitrate of Lime

Guaranteed not less than 13 per cent Nitrogen—almost 100 per cent Pure.

Nitrate of Lime supplies Nitrogen in the most available form. Packed in solid wooden casks about 240 pounds.

Winter Rhubarb

By Ernest Braunton

DURING the great world war the rhubarb industry enjoyed a slumber, for what good is 'barb without sugar? And sugar could not, at times, be obtained for any price. But now that war "has smoothed his ruffled front," a large new acreage is being planted.

In the meantime the method of planting has been changed by the best growers. Formerly rows were set five feet apart and the plants one and a half feet apart in the rows. This allowed of cultivation but one way and required much hand work in the rows. It also left much soil unstirred. The practice now is to plant rows four feet apart and the plants three feet apart in the row, but also kept in rows crosswise. This allows cross-cultivation in the spring, and the soil is deeply stirred on all sides of the hills. The hand weeding is thereby reduced to a minimum.

While rhubarb may be planted at any time and much of it is being now put out, April and May are the best months. If soil is light and warm rhubarb set out now will give a spring crop. And really heavy soil is not good for rhubarb anyway. J. B. Wagner, one of the heaviest and most successful growers, planted out five acres during the middle of October so no one need be timorous about autumn planting.

If the soil is somewhat dry the field should be irrigated within a week after planting, but if the soil is damp it may be left for two weeks. During the summer irrigation should be given every three weeks, as a rule, but soil and weather may both modify the procedure. While commercial fertilizers and nitrate of soda are much used, there is no material so good as horse manure, and if sufficient of this may be given no other fertilization will be necessary. On the Wagner fields 300 pounds of nitrate of soda has been used to the acre. This is dropped by hand into furrows plowed close to the rows.

While rhubarb is picked over a long season in California, the big crops and the big prices are obtained from February to June. Of course canning of rhubarb, which is a rapidly growing industry, can only take place during the season of heavy production. From spring planting, if weather conditions are favorable and good care is given, a fine crop may be harvested at four months from time of setting the roots. The major production is reached the third year after planting and the period of decadence is not known for rhubarb has no old age. When the roots get so large as to prevent proper cultivation it is doubtless better to reset, though the oldest fields are producing the biggest crops.

Summer rhubarb is not much considered though a small acreage is grown for commercial purposes. The winter rhubarb industry in Southern California is confined almost entirely to Los Angeles and Orange Counties, in which the total is about 150 acres. Nearly all of this acreage is owned by members of the Southern California Rhubarb Growers Association with headquarters at the Los Angeles public market, and in season an office at the Arcade Station. This organization ships the product under the name of Giant Strawberry Rhubarb, in boxes the net weight of which is "30 pounds or over." The recovery from the lull of war times was so rapid that last season was the best ever enjoyed by the association, and the members are looking forward with enthusiasm to the coming one, believing it will also prove "the best ever."

VAST SUMS FOR ROADS

A survey of the highway bond issues and movements looking toward improvement in highways during the next year indicates that America has fully awakened to the need for more and better transportation facilities. Notwithstanding California's activity along this line during the past few years, she is still well toward the front in the matter of bond issues as compared with other states. Texas, the biggest state of all takes the lead in this good roads movement, as indicated by the extent of her bond issues. That state now proposes to issue $75,000,000 worth of bonds for good roads, or rather, on November 4, next Tuesday, will vote upon such issues. The various counties of the state have already authorized an issue of $73,532,000 and other counties propose soon to vote upon issues aggregating a total of $22,790,000.

Another state which surpasses California is Illinois, which has the greater proportion of her $60,000,000 bond issue yet to spend. This $60,000,000, with appropriations made by the various counties, amounts to $62,615,000, while proposed issues to be voted upon between now and April, 1920, will aggregate another $11,398,000.

Kansas is taking steps to vote upon a $60,000,000 bond issue, but this will not be until 1920. Wisconsin will soon vote upon a $50,000,000 bond proposition, while various counties contemplate $24,000,000 additional. Counties in that state have already authorized issues to the total of $12,920,000.

Arizona does not contemplate immediate state issue, but various counties will soon vote upon issues to the extent of $10,750,000, and Maricopa County has already authorized, in May of this year, an issue of $4,000,000. Oregon recently authorized a state issue of $10,000,000 and county issues of nearly an equal amount. The state of Washington will vote during the present month on an issue of $30,000,000; county issues already authorized during this year aggregate $7,875,000.

California's $40,000,000 issue was almost unanimously voted on July 1 of the present year, and counties of this state have authorized during the past 12 months $17,530,000 in bonds, while other counties propose soon to issue nearly $6,000,000 more for good roads. The issues of the various counties in the state within the past 12 months are as follows: Contra Costa, $2,600,000; Fresno, $4,800,000; Imperial, $1,500,000; Merced, $1,250,000; Modoc, $400,000; Napa, $500,000; San Francisco, $924,000; Santa Cruz, $824,000; Sonoma, $1,640,000; Sutter, $810,000; Tehama, $607,000; Ventura, $580,000; Yolo, $1,000,000.

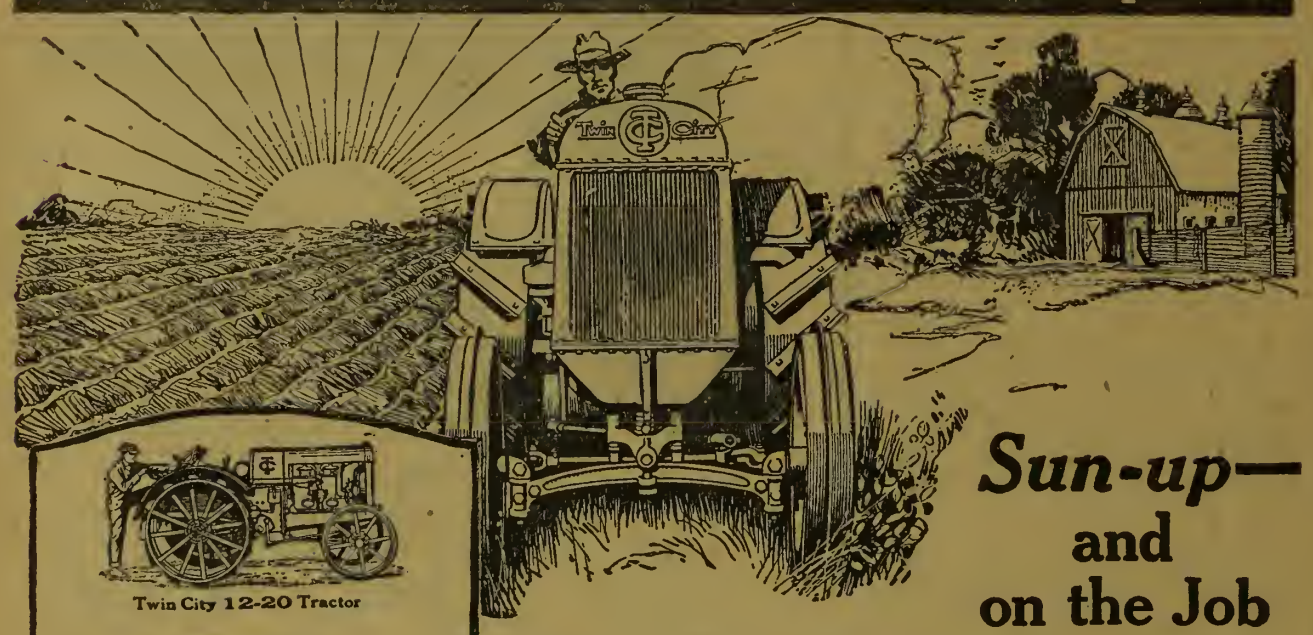
SOIL SURVEY MADE IN LOS ANGELES DISTRICT

A survey of the soils in the Los Angeles area has been made and report is now published by the federal department of agriculture, with colored map of the area showing approximate location of farms and extent and distribution of the various soil types. The report contains 78 pages of text describing the various soils and discussing their capabilities. It also includes a brief historical and geographical sketch of the region, together with statistics relating to climate and farm practices. Copies of the report may be had free on application to United States Department of Agriculture, Washington, D. C.

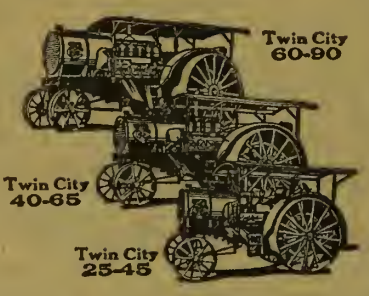
CALIFORNIA ONION CROP

The total acreage of late onions in the state is estimated to be 6,570, but 300 acres less than that of 1918. In addition there are about 1,700 acres in the delta district that are grown under contract with seedsmen. The average yield per acre is about 363 bushels.

Built to meet the work—not to meet a price



Twin City 12-20 Tractor



Twin City 16-30 Tractor

The New Twin City All-Steel Thresher —a Farmer's Machine for Lifetime Service

Sun-up— and on the Job

IN the rush times, when every moment is precious, from sun-up to sundown, TWIN CITY tractors and threshers are ready to go. They are built that way.

Dependable TWIN CITY design is well shown in the 12-20 motor—a 16-valve-in-head, 4-cylinder engine.

The double valve capacity burns the kerosene charge so cleanly that carbon clogging, pre-ignition and overheating are eliminated. A finely counterbalanced crankshaft (drilled for force-feed lubrication) reduces the "whip" of vibration to harmlessness. Cylinder sleeves are removable—reboring is never necessary.

Rated at 20 horse power, this engine delivers an unusual surplus of power *at its normal* speed of 1,000 r. p. m. Its power reserve is on a par with its reserve endurance.

And the TWIN CITY spur-gear transmission is as far in advance of the times as is the engine—with its direct drive on both forward speeds, its steel cut and case hardened gears completely enclosed and running in oil, mounted on Hyatt roller bearings.

There is TWIN CITY power for all farm work on any size farm. So write us today for booklets and complete information concerning the tractor and thresher that fit your needs.

Solving the Hauling Problem

By James De Camp

IN these days of conservation and economy many agriculturists who feel the need of motor truck equipment are struggling along with horses, trailers attached to the family touring car, and other makeshifts.

With the bank balance and expense account running a dead heat that precludes the purchase of a brand new truck the situation may look discouraging. But there yet remains an inexpensive solution of the hauling problem through the remodeling of suitable cars to be found in the second-hand markets.

Despite the weary adage which tells us that "beauty is only skin deep" the public continues to buy used cars almost solely on the basis of external appearance. Take a salesman of second-hand cars out to lunch, regale him with a succulent T-bone, plant a fat black cigar in his map and delicately pilot the conversation toward the secrets of the trade. You will learn that a slick top and slippery finish predominate in determining the valuation of a car, that a shiny coat of paint is more desirable than mechanical perfection, that the public buys with hardly a glance under the hood.

There are for sale hundreds of cars capable of rendering the best of service which, because of obsolete body design, lack of a self-starter, poor finish, or some such minor handicap can be bought at most reasonable prices. Almost invariably these creations of more remote years possess the qualities of sturdiness and power needed to cope with the hauling and marketing problems of the farm.

The work of remodeling can be accomplished by the rancher himself or with the aid of a practical carpenter. Usually the driver's compartment may be left intact. With a little ingenuity the old top and side curtains may be trimmed to measure and with the rear bows and back curtain will serve as a satisfactory cover for the operator's seat. Remove the remainder of the top and keep it for a hood cover in wet weather.

The tonneau is easily detached, the back seat often proving useful as a porch seat or to lounge upon in the arbor or some shady nook. Should the gas tank be mounted in the rear time and bother will be saved by transferring it to the compartment under the front seat, since it is highly probable that the finished truck body will project so far over the back axle as to make the tank inaccessible.

Selection of the type of body depends, of course, upon the character of the work to be done. Light hauling, such as the handling of dairy products, can be accommodated by a light express body without extension or bracing. If heavier duty is contemplated or greater capacity desired the nearest blacksmith will usually prove competent to lengthen the frame and install auxiliary braces.

In the larger cities there are many plants devoted exclusively to body building, while hundreds of second-hand bodies of every conceivable kind may be picked up at ridiculously small sums. The agriculturist who understands the elements of carpentry should be able to do the work for himself with a small investment in lumber, bracings and stout bolts. Numbers of truck attachments are on the market for the homely flivver and some are even adaptable to larger cars.

In operating the homemade motor truck the main pitfalls to avoid are overloading and unreasonable speed. Strain on the transmission and chassis will be avoided by using the low and intermediate gears on grades instead of calling upon the reserve power of the motor to carry the load over on high. In descending hills shift to intermediate or low and force the compression to shoulder part of the strain of holding back. Remember that you will usually be carrying a load heavier than that for which the brakes are intended and accustom yourself to a wider margin for stopping or slowing down.

If overhauled with reasonable thoroughness the power plant should stay on the job with nominal upkeep expense. Older cars demand plenty of oil; not the thin, green tea variety, but heavy motor oil with body enough to afford real protection for bearings and wearing surfaces. This variety of oil is commonly designated as "Eastern" although several California refineries put out a product with similar qualities. Lighter oils can be bought for about half the price but will inevitably cause disaster.

The starting systems on cars built several years ago are usually a source of annoyance. If the ignition system includes a good magneto you will avoid much expense and exasperation by sidetracking the starting equipment with its storage battery and generator. "Winding her up" is good exercise, especially on a frosty morning, but the process is positive and does not rely on the expensive peculiarities of starters and batteries manufactured in the experimental days of the self-starting regime.

Tires should never be allowed to deviate from the maximum pressure allowed for their size. If heavy loads are carried regularly oversize casings should be used. In some instances it has been found profitable to equip the rear with solid tires, although this change usually entails the purchase of another pair of wheels.

The man of moderate means and average ingenuity can provide himself with a dependable light truck for from five to seven hundred dollars by the remodeling method. If care is used in handling the vehicle and abuse avoided it should render several years of service. A weekly inspection for loose nuts, empty grease cups, worn insulation on the wiring and such minor matters will frequently prevent hours of delay on the road.

A man's house is his castle. One is frequently judged by the character and appearance of his home and its surrounding grounds. But in the case of farms and ranches the public often forms its ideas from the neatness of the motor equipment which the establishment sends to cities and markets. Paint and psychology have become indispensable factors in modern business. Several dollars invested in good quality paint of appropriate color will make your remodeled truck a credit to yourself and the community. A tidy professional job of lettering on the body, calling attention to the name, location and nature of your place, will yield heavy dividends in publicity and prestige.

CANADIAN SOLDIERS

The general secretary of the British Columbia Returned Soldier Commission writes the Cultivator that inasmuch as many Canadian soldiers have scattered and many are in the United States, that we cooperate in informing these men that they are entitled to a war service gratuity which may be secured by making application to the B. C. Returned Soldier Commission, Parliament Bldg., Victoria, B. C. The secretary writes:

"Under the original order in council dealing with the payment of war service gratuities, men who did not see service in France and men who were discharged previous to the signing of the armistice on November 11, 1918, were not entitled to participate in same. Under a recent order in council this ruling has been changed and men who come under the above classification are now entitled to payment of gratuity."

PHILIPPINE OPPORTUNITIES

The bureau of foreign and domestic commerce reports that the excellent opportunities in cocoanut farming are attracting increased capital to Mindanao Province. It is said that it is possible, after the first six months of cultivation, to make the return from corn grown between the rows of cocoanuts sufficient to cover all expenses of opening a plantation. It is further stated that a profitable fish canning industry might be established in Abra Province.

INCREASED CELERY ACREAGE

The acreage to be planted to celery in this state for the 1919-20 season promises to be nearly 1,000 more than last season. This year's estimate is 3,800 acres, while that of last season was but 2900, though in 1917-18 it was 5500 acres.

WALTHAM THE SCIENTIFICALLY BUILT WATCH AND THE FOREIGN BUILT WATCH

The Vanguard
The World's Finest Railroad Watch
23 jewels
$66 and up

Facts You Should Know Before Selecting a Watch

BETWEEN the two supporting plates of a Waltham watch, which together constitute a frame, is mounted a system of gearing, called a Time Train. The reader has learned that the motive power of the watch is derived from the mainspring. At one extremity of the train is a hardened and tempered steel barrel (another Waltham creation) which contains the mainspring. When the thumb and finger wind the mainspring, its stored energy is delivered to the next wheel in the train and from that to the next, and so on.

This train consists of four wheels and pinions. The center wheel is in the exact center of the watch, and directly connected through the cannon pinion (so called because it is shaped like a cannon) with the wheels that control the hour and minute hands; and through this center wheel the power of the mainspring is carried onward through the other wheels of the train to the escape wheel pinion, which we will illustrate in its proper place.

The train of a Waltham watch — each wheel, each pinion — is cut to the fraction of a human hair — mechanically perfect, interchangeable for the serial watches they are made for — standardized in perfection, in absolute exactness and quality, made by machines tuned to infinitesimal gauge-fit and untouched by human hands.

The "train" of the imported watch is made by the old hand process. It is not interchangeable, and it is of varying quality.

This vital part of the Waltham watch is another of those reasons why the horologists of great nations came to Waltham for time, and why your watch selection should be a Waltham.

Waltham placed America First in watchmaking.

This story is continued in a beautiful booklet in which you will find a liberal watch education. Sent free upon request. Waltham Watch Company, Waltham, Mass.

November in the Vegetable Garden in Northern California

By A. R. Gould

NOW that the winter months are here and the days shorter working hours in the garden will be limited, but our planting will also be much shorter and we now have to get busy clearing the plots for early spring use. Therefore soil preparation will be in order and most of the plots recently cleared off, such as those occupied by tomatoes, melons, cucumbers, beans, etc., will greatly benefit by the application of lime (air slaked). The effect of lime on soils is very interesting and it has now come into more general use in this country although in Europe it has been in common use for many years. Lime acts on vegetable matter, setting free ammonia, water, nitric acid and carbon dioxide; it neutralizes organic acids, thus sweetening the soil; it opens up heavy clay soils, while on light or sandy soils it binds the particles together and makes them more retentive. Lime has a tendency to sink in the soil and Darwin has shown that the action of earthworms buries it and it is best to apply small doses of lime at short intervals rather than large doses at long intervals. The quantity to apply will of course depend upon the actual condition of the soil, but generally speaking eight to ten hundredweight per acre applied yearly will give good results. Slaked lime has been found effective in checking some fungoid diseases the spores of which usually winter in the soil. As to methods of applying it may be spread evenly on the surface of the soil and thoroughly mixed in the plot being prepared. It should be noted that while lime is a plant food in itself it will not supply every need but it acts on the humus and makes it available also for plant food. Dig in all vegetable matter but remove all diseased fruits of tomatoes to prevent further trouble as these spores quickly spread.

Peas

This is one of the hardiest crops we have and we can sow almost any time now the following varieties: Extra Early Blue Bantam, very productive, tender and sweet, dwarf vine; Alaska, an extra early, used largely for canning, will stand lots of water. Little Marvel, dwarf and very prolific. Thomas Laxton, an early tall variety, requires staking. Have the ground well cultivated before sowing in shallow trenches. The soil should be kept fairly moist and only the best seed used. The dwarf varieties can be planted in rows one and one-half to two feet apart and the tall varieties two and one-half to three feet. The birds are usually very troublesome to the young sprouting peas, but arsenate of lead sprayed on the young shoots or dusted in dry form will usually prevent any damage.

Lettuce

Sow for succession in well manured ground Los Angeles, Big Boston and May King, all desirable. These may be sown in rows or broadcasted very thinly.

Onions

Continue to sow early varieties: California Early Red, which will not readily go to seed as is the case with some varieties. Extra Early Pearl, a very mild variety. White Bermuda. It pays to use plenty of manure on the onion seed bed which should have been trenched in thoroughly some few weeks before the seed is sown. Plots used last season for beans will be very suitable for onions. Those who wish to have early onions may also plant onion sets. These sets should be planted in rows 12 inches or so apart. This month the plots for the main crop variety should be well prepared and sheep, horse or cow manure well trenched into the soil. Soot or wood ashes raked into the surface will also prove of value.

Broad Beans

These beans, commonly known as Horse beans, are the hardiest we have and are excellent for table use. They grow from one and one-half to two feet high and should be planted one inch apart in rows two to two and one-half feet apart. The variety Broad Windsor is the best and should be planted this month.

Asparagus and Rhubarb

These are profitable crops and ground may be prepared now for planting next month. Plenty of farmyard manure is essential and it must be trenched in at least two feet deep. We shall deal more fully with this subject in our next month's notes when varieties and planting hints will be given. Existing beds should be forked over.

Carrots

Sow for succession French Shorthorn, Danver's Half Long or Chantenay in rows 18 inches apart. The soil should be well manured and in a moist condition. Keep the hoe busy between those earlier sown.

Cabbage

Plants may still be secured and planted for winter use. Sturdy plants of Savoy variety should be put out 18 to 20 inches apart in rows.

Celery

This will need tying up and the stems should be covered with brown paper to blanch or whiten them. A frequent watering with liquid manure will be very helpful as it will stimulate growth.

Strawberries

Plant out well rooted young plants of Oregon Improved, Malinda and Brandywine. They need rich soil which has been well prepared. Plant in rows two feet apart and plant firmly.

To Get This FREE Fur Book

The real shipping season is just started. Send for this book now and get in on the big money! Cram full of trapping lore! Pictures of leading fur-bearers in color. Questions and Answers

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Bounties

I would like to have a list of all the fowls and animals (such as hawks, other birds, coyotes, etc.), that you can get a bounty on, also the bounty price on each. I hear there is a bounty on buzzards, jack rabbits, squirrels, etc. Is there? Where can you get the bounty money, and what do you have to do to get it? What are the most valuable animals to trap for valuable furs? Do you know of any good trapping places in Los Angeles County?—Subscriber, Porterville.

The state fish and game commission pays bounty of $20 on male mountain lions and $30 on females. No other bounties are paid excepting in indivi-ual counties. In Los Angeles County at the present time no bounties are paid. There are, however, rigid ordinances on keeping pests cleaned up and penalty is prescribed for the farmer whose place harbors them to the detriment of neighboring ranches. Some counties have paid as high as $10 for coyotes. The only way to secure information as to the various counties would be to write to the clerk of the board of supervisors at the county seat, who will also give information as to how to collect bounties. There is no state bounty on hawks or other birds, but there is likewise no protection and their killing is permitted, except that there is a fine of $25 for killing buzzards. We may add, however, that since the prevalence of hog cholera it has been suggested by swine breeders that protection on them should be removed because it has been shown that they are serious factors in the distribution of hog cholera germs. As to trapping in the mountains of Los Angeles County there is but little opportunity. Trappers occasionally secure a red fox, but we question as to their being plentiful enough to make their trapping as a business remunerative.

Gypsum

Is calcium sulphate the same as gypsum? In what way is it valuable as a content of a commercial fertilizer? Will it aid in lightening heavy soils as lime does? Can it have any injurious effects on certain soils?—Subscriber, Porterville.

This question was referred to the U. S. Gypsum Co., and it answers; "Calcium sulphate is gypsum. It releases valuable plant foods which are contained in soils but which are insoluble and consequently not available as plant food until treated with gypsum. Gypsum in itself furnishes sulphur and lime, both of which are essential as plant foods. It lightens heavy soil, preventing it from packing or baking during the hot, dry season. It contains absolutely nothing that would be in any manner injurious to soil or growing vegetation of any kind. It is also sown on land to attract ammonia from the atmosphere.

Trees Not True to Name

Four years ago I set out an almond orchard which came into bearing this year. While there are some of the varieties I ordered there are many that I did not order, in fact they are mixed up with everything, bitter, hard shells, Lefranc and other kinds, I don't know the name of. In my old orchard are two rows of Lefranc which have a flavor something like a peach seed. I have sold these Lefranc almonds a number of times to this nurseryman for nursery stock, and I find a great many of this kind in the young orchard. Those trees have never been budded at all. Here is four years loss of land, taxes on same, interest on money. What can be done in a case of this kind?—Subscriber, Ripon.

It appears from this statement that even seedlings were sold for budded trees. Presumably, if such is the case, there would be no question but that the nurseryman is responsible for serious loss. However, is our inquirer positive that the trees had the best of care and that the bud did not die at replanting time and the seedling shoots come up from the old rootstock? It sometimes happens that after planting time the top or budded tree is crowded out by a more vigorous shoot from the seedling root and the growth from the bud may even by mistake be removed to give this more vigorous growth precedence. It goes without saying that the nurserymen should observe greatest care in giving out only trees true to name, and we believe they make reservation on their billheads that they are not responsible for other than the price charged for the tree if it does not prove tree to name. But if a nurseryman has sold seedlings in place of true budded trees, then his reservation would hardly hold in the eyes of the law.

Growing Guavas

Should guavas be watered and cultivated a great deal? Heretofore we have been away from our ranch and our trees have had wonderfully large guavas on them. This year I watered and cultivated them profusely and the guavas are very small and drop off before they are colored.—Subscriber.

Guavas should be irrigated once a month through the hot weather, but it is not believed much cultivation is necessary as uncultivated plants have been known to yield large crops of large fruits. They need a fair amount of fertilizer. It is possible you watered your plants too heavily in cool weather and this would cause the fruits to drop heavily. Copious and frequent irrigations should be given only in the hottest part of summer.

Budding Stock

What root would you advise for almonds, peach or almond? My soil is loose and sandy. Is almond root more subject to root knot than peach?—Subscriber, Porterville.

Almonds are budded on both stocks but almond stock is preferred by those most experienced. Your soil is ideal for almonds. Root knot attacks both peach and almond and we have no authentic date as to which is more resistant.

GETTING READY FOR ORANGE SHOW

Citrus growers of the state are now beginning to prepare for the National Orange Show, the tenth annual exposition of which will occur in San Bernardino, February 13-23, 1920.

STATE EGG LAYING CONTEST

The management of the state egg laying contest to be conducted at Santa Cruz finds it necessary to postpone the final date on which entries may be made in this annual contest to November 15 instead of November 1 as first announced.

Several hundred acres of fine cotton is being picked in the Dos Palos section of Madera County.

Prince Albert is supplied in toppy red bags, tidy red tins, handsome pound and half pound tin humidors—and—in that classy, practical pound crystal glass humidor with sponge moistener top that keeps the tobacco in such perfect condition.

PUT a pipe in your mouth that's filled brimful of Prince Albert, if you're after smoke peace! For, no matter how bad has been your pipe-past or your experience rolling your own, P. A. will hand you such tobacco joy you'll wish your job was to see how much P. A. you could get away with!

You can "carry on" with Prince Albert through thick and thin and no matter how hard you test it out you'll find it true to your taste and tongue. You'll be after laying down a smoke barrage that'll make the boys think of the days in France!

Prince Albert never tires your taste *because it has the quality!* P. A. is made by our exclusive patented process which cuts out bite and parch—assurance that you can make new smoke records without any comeback but real smoke joy every time you fire up!

The Vegetable Garden for November in Southern California

By D. F. Reichard

THE rains of last month loosened up the ground and cleared out the air, giving us a "call to the garden" such as we get with our spring rains. The impulse is to clean up all matured stuff and work up the ground and put in new crops.

The important thing this month is to clean up. Gather all old cornstalks, dead vines and trash in piles and hurn or put in compost pile for fertilizer.

Dig the sweet potatoes, take in pumpkins, squash and casaba. Put them away in cool dry places where they will not get scratched or bruised. Prune deciduous fruit trees and berry bushes. Spray them with Bordeaux mixture to control fungus. The spores of fungus hold over the winter in crevices in the bark and on litter. By spraying the trees and bushes and letting considerable of the mixture fall on the ground and litter under them, most of the spores are destroyed.

On all ground that is not to be utilized for winter crops put a generous quantity of coarse barnyard manure and turn it under. Leave the ground in this loose condition to absorb the winter rains. Break up the surface after each heavy storm to prevent a crust from forming. For ground that is to be used at once apply either well rotted manure or commercial fertilizers. These give quick action and do not leave the soil porous as do coarse manures. On account of the shorter days and cooler nights plants do not grow and develop as rapidly during the winter months as in the spring and summer. By the use of fertilizers the growth is boosted along to a considerable degree and the planting of a winter garden is made worth while.

Set out plants of cabbage, cauliflower, kale and Swiss chard. These all grow through the cooler months and do well.

Egyptian beets, oxheart carrots, purpletop Globe turnips. early and winter radishes. Wonderful lettuce, Amsterdam Giant spinach and onion sets, these may all he planted now for use next February and March.

Asparagus and rhubarb roots, Jerusalem artichokes and horseradish are set out from now until spring. In frostless sections potatoes may be planted during this month for early spring crop. Sow seed of eggplant, peppers and tomatoes in hotbeds for plants to make early plantings in the spring.

Watch the growing stuff. As long as the rains hold off it will be necessary to irrigate and cultivate. Do not neglect to supply fertilizer where the plants are not growing as fast as you think they should.

Ornamental Gardening in November in Southern California

By Ernest Braunton

ALL THE work, sowing and planting recommended for October may be done in November. We start gardening for the winter season during the first month simply because we want to begin, not because it is the best time. For bulb planting the last of October or the first part of November is far better than earlier. So plant bulbs now and plant them freely—any kind of bulbs.

This is also a cleaning up time. It seems that hardly anyone will clean his garden, his street or road front, or make any other improvement in general appearances until November. Early and copious rains alone stimulate earlier work. This is the time when neighborhood or district improvement societies awaken from their summer lethargy and cast about for the best means of cleaning and making bright that small part of the world falling under their jurisdiction. Roadside planting with trees and wild flowers constitutes the whole of highway gardening. It is getting to be quite a fad, and a most commendable one, to plant California native wild flowers along the farm frontage. This should be done by all so that our highways may be bright with our own floral beauties. Many of these are self seeding, so that one sowing is for all time.

We hardly know what to advise on seed sowing except to say sow almost any and all seeds. It is the best of times for sowing wild flowers, and more California poppy seed is sown in November than in the other 11 months. But all poppies may be sown now, and candytuft, snapdragon, stocks, larkspurs, columbines, centaureas, calendulas and marigolds, gypsophila, and, best of all, sweet peas. Poor luck with sweet peas is usually due to lack of soil preparation. You must enrich the soil, mix the fertilizer thoroughly and dig deeply. Sweet peas must have a deep soil well pulverized.

Many garden plants that have bloomed out may now be headed back or severely pruned to stimulate new growth. Some of this class, liko fuchsias, should be left unpruned until February or frosts will catch the tender growth, but penstemons and hardy herbaceous tops may fairly be slaughtered and good results will follow. Many cuttings from this class of plants will now root readily in boxes of sand, begonias, fuchsias, marigolds, etc., and it is the best time of all for rose cuttings. The writer put in rose cuttings early in October, for he wished to start the bushes into growth and the cuttings are best taken when the wood is dormant. Now is also the best time to fertilize rose bushes, and stable manure is the best material, but failing in that any good commercial will do. It seems roses are made better by anything in food that other plants need. The best practice, after light spading of the soil, is to cover the whole bed with not less than four inches of strawy stable manure and leave it so until spring. The rains will wash it clean and you will have a nice straw mat on which to walk while picking flowers.

AN IMPROVEMENT IN THE SETTING OF WAYSIDE TREES

Because trees have been set in stiff, exact rows along the waysides for ages, the possibility of there being any different and better way is apparently never even thought of.

Consider nature's way of grouping her trees and plants: there are no straight lines and no uniform and exact spaces between growing things of her setting, and she attains far better and more artistic results in her work than the man with the straightedge and measuring line, and there is no end to her ever-changing combinations and artistic effects. The "English garden", with its stiff straight lines, is an abomination. The best to be secured is to follow along nature's lines, but adapting them to the varying conditions of the waysides.

In place of rows set the trees in clumps, as a rule of but a single variety in a clump. Let the clumps vary in size and natural groupings to fit the place, from three to 30 in a bunch, the distance apart of the trees and the number in a clump to depend upon the size, growth and habit of the tree, and the distance between the clumps to depend upon tho lay of the land, the soil, moisture, exposure, and other conditions.

Tho grouping of the trees should be the work of landscape artists, the best available. Their work would add much

to the beauties of the landscape that took in such roads. Some clumps might extend two or three trees deep into the roadway, and, with the consent and cooperation of the landowner, some might also project back into the fields. Others, like the tall straight Lombardy poplar and eucalyptus globulus, would be effective in straight strings of about five in a line. The setting of the stakes for the clumps and for each tree in the clump should be the result of intelligent, artistic consideration given to each particular group. The spaces between clumps should be, probably, from 50 to 200 feet. This treatment of the roadsides would make them vastly more attractive from a distance, and the view from the roads would be much more enjoyable than if cut off every second or two by regularly spaced trees; the sun would have a chance to dry off the roads after the summer as well as the winter rains, which would be an economic feature of importance enough to be taken into account, and yet there would be numerous shady places under which to alight and enjoy the vistas.

THE WHEAT INDUSTRY

In an address at the National Wheat Show in Wichita, Kansas, Dr. R. J. H. De Loach said:

The largest yield of wheat on record in the United States department of agriculture is 117 bushels per acre on 18 acrees in the state of Washington. The next largest is 108 bushels on ten acres in the state of Idaho. These high records would have little significance except for the importance of the wheat crop and the gradually decreasing surplus wheat lands of the United States; also the increasing popularity and the growing needs of larger and larger crops of wheat and other grains. This great country of ours can never grow maximum crops on all the lands, but plans can be laid for larger yields per acre.

Cost of Production

The Minnesota experiment station found that it required 12 1-3 hours of human labor and 30 hours of horse labor to produce an acre of wheat. Since the cost was based on hours of labor rather than dollars and cents it holds good today, and to translate it into dollars and cents one needs only to multiply the hours by the price of labor at a given time.

If the yield was 12 1-3 bushels per acre, each bushel would require one hour of human labor and two and a half hours of horse labor. If the yield had been 24 2-3 bushels the cost would have been reduced half per bushel except the very small additional time required for harvest and threshing.

Select Seed

One way to reduce cost of wheat production is to select seed wheat successfully, and gradually eliminate all poor and low yielding plants. My own observations prove to me that at least one-third of the plants in any field are failures; that is, they are not paying the expense of tilling the soil in which they grow. They get the plant food elements from the soil and fail to give the proper return. Science is helping to eliminate this terrible loss by making more of the plants pay—by making more of them yield full plump heads—and there is sufficient proof that this can be done.

Rotate Crops

A second principle to observe in the successful growing of wheat and reducing the cost of production is the proper rotation of crops, whereby cover crops can be plowed under one year in two or two years in three. Each section of the country has its own crop rotation system, but the plan must always provide for a substantial production of organic matter to be returned to the soil. Rotation helps also to keep the land free from disease, and doubly insures higher yields.

A third point for consideration is the proper balancing of plant foods in the soil so that the plants may draw upon this source for a constant diet. Belgium has perhaps been most successful along this line, and just prior to the war reported the highest yield per acre of wheat of any country in the world, also the lowest cost per bushel to produce. With a wonderful system of tillage, Belgium applies more plant food per acre to her wheat lands than any other country on the globe.

"There's A Right Way"

"Some folks think that when you blast for tree planting you've got to shoot the earth up to the sky—that's *wrong*. A good shot for tree planting just raises the surface earth two or three feet—then the force of the dynamite is properly used—it breaks up the earth all around the hole and gives the young tree's roots a chance to spread.

"The best dynamite to use for tree planting is

HERCULES DYNAMITE

and the best way to find out how to use it most effectively is to send to the Hercules Powder Co. for the 68 page illustrated book, 'Progressive Cultivation'. This book not only tells of the many things that dynamite can do to help you with your farm work but it gives detailed *directions* for every blasting operation.

"And the best part is that any farmer or orchardist can get this book *free*. The Hercules Powder Co. will send it to you if you will sign and send in the attached coupon."

SALES A FEATURE OF SAN FRANCISCO SHOW

Not the least important feature of the California International Livestock Show, to he held November 1-8, will be the series of sales scheduled for that week.

The show management has provided a splendid sales pavilion and has offered every encouragement to the various breed associations to utilize the show as a place for sales.

This California Shorthorn Breeders' Association will conduct a sale of 30 carefully selected females and ten head of high class hulls. The consignments have come from such representative herds as: Caledonia Farms, West Sacramento; T. T. Miller and Pacheco Cattle Co., Hollister; Estate of T. B. Dihblee, Santa Barbara; Ormondale Co., Redwood City and H. L. & E. H. Murphy, Perkins. A numher of the lots represent the more popular Scotch families as well as the best American families.

Following the Shorthorn sale the Pacific Coast Hereford Breeders' Association will hold a sale of ahout 35 head of bulls and females. This sale offering was selected by Alec McDonald under instructions to pick only superior cattle. How well the commission was carried out can be guessed. The sale is notable for the unusually large number of outstanding individuals that have been consigned. As a matter of fact, 24 head listed for sale are also entered in the show. Seventeen cows with calves at foot offer a splendid buying opportunity.

On November 8, H. M. Barngrover of San Jose will offer at auction 90 head unregistered pure bred Herefords. This offering is expected to prove attractive to cattlemen desirous of installing a better class of cattle. Much of the offering has been sired hy Patrician 5th, the splendid breeding bull owned by Mr. Barngrover.

The first two sales will he held at the show headquarters, the latter sale at the yards of the Western Meat Co., South San Francisco.

The Hereford sales will be managed by C. L. Hughes of the California Breeders' Sales and Pedigree Co., Sacramento. Col. Earl Gartin of Indiana will be the auctioneer.

CALEDONIA SHORTHORNS IN SAN FRANCISCO SHOW

A feature of the Shorthorn sale to be held at San Francisco November 6 will he the consignment of females from the Caledonia herd owned by Edward Cehrian.

Mr. Cebrian will consign 14 head of cows and heifers. Several of the cows will sell with calves at foot and rebred and all the heifers sell bred.. The sale will afford the first opportunity for Western breeders to secure the hiood of the two great bulls recently added to the Caledonia herd, namely, Caledonia, considered by many authorities as the best bull imported in years, and Gainford Matchless, a son of Gainford Marquis. Gainford Matchless will be seen in the show ring and his initial public appearance is heing watched with the greatest interest.

The Caledonia Farms herd is recognized as one of the most notable collections of the breed owned in America and is expected to play a commanding part in the progress of the breed.

CALIFORNIA WOOL GROWERS

A special meeting of the California Wool Growers' Association will be held at San Francisco in the California Building on Friday, November 7 at 2 p. m. for the purpose of discussing and taking action on the Kenyon bill and other legislative matters.

The California International Livestock Show will be on at this time and you are urged to attend both the show and this special meeting.

THE HORSE SHOW

The exhibit of draft horses was neither so extensive as at the show held at Sacramento nor did it register such high quaiity throughout.

Merritt-Bowers Co., exhibited Percherons, Belgians, Shires, Clydesdales and light horses.

This firm had the champion Percheron stallion with Patre of Paicines. James Marwick's Luna was champion mare. Fred H. Bixby showed Montezuma Chief to the Shire championship. Merritt-Bowers Co. had the champion Shire mare, Wrydeland's Model.

The Dibblee Estate, Santa Barbara, had hoth the Clydesdale champions.

Professor F. W. Wilson, of the University of Nevada, passed on the heavy horse classes.

DAIRY COUNCIL DAY

A special meeting of California Dairy Councii will be held in the convention hali of the California Buiiding, Exposition Grounds, San Francisco, Thursday, November 6.

The management of the California International Livestock Show has generously set aside November 6 as California Dairy Councii Day, and the whole day will be given over to practical discussions and the viewing of the many enlightening exhibits which no member of California's dairy industry can afford to miss. The program opens at 9:30.

Program

Stock judging demonstration in arena. The place of cow testing in the dairy business, N. A. Negley, dairy division, U. S. Department of Agriculture; How cow testing will help to make money for the dairyman, A. J. Gallagher, Bodega; The dairyman's obligation to the public and his opportunity, Prof. C. W. Rubel, College of Agriculture, Berkeley. Afternoon: The state dairy council idea, Sam H. Greene; Why every commerciai dairy herd should have a pure bred sire, M. H. Tichenor, Palo Aito; Illustrated lecture, Ten years of cow testing in Humhoidt County.

During Livestock Show week, November 1-8, it is planned to hold a typical dairy luncheon at the Commerciai Club, at which oniy dairy products will be served. Dr. Thomas F. Hunt, Dr. Wm. C. Hassler, and Sam H. Greene will acquaint club members with the importance of dairying to the state of California and will present facts and figures showing the true patriotism and practical business wisdom of encouraging the use of milk and its products.

Charles R. Thomas

The manager of the Los Angeles Livestock Show.

November 19. Fresno County Poland China Breeders' Association, Fresno.

ARE YOU A TOP-NOTCHER?

The first principle of the successful breeder—the top-notcher—the one that breeds the "killer" kind—is a thorough knowledge of blood and blood lines, feeds and feeding, and a practical application of that knowledge.

It is the apparently little things that go to make the prominent hog breeder—brains and brain work that develop the big type that produces—that's why 90 per cent of the big breeders—the men with the reputation—feed Economy Stock Powder. They recognize through their years of experience a something in Economy Stock Powder that is dependable as a conditioner—and this recognition is based on the results obtained by a careful tryout.

Economy Stock Powder is not a cure-all—not a medicated salt—it contains no harmful drugs or opiates. It is a conditioner—a worm expeller and disease preventive, and is made up of the following ingredients:

Sulphate of Soda	Hypo-Sulphite of Soda	Poke Root
Bi-Carbonate of Soda	Charcoal	Blood Root
Carbonic Soda	Sulphur	Worm Seed Meal

These ingredients are so blended and so proportioned as to do the work intended for them.

90 Purebred Unregistered HEREFORDS

at Public Auction

Western Meat Company's Yards

South San Francisco

Saturday, November 8, at 1 p.m.

This is an extra choice lot of Hereford cows, heifers, and bulls, and is a complete dispersal of the unregistered Herefords owned by Mr. H. M. BARNGROVER, Proprietor of VERAMONT STOCK FARM, Taylorsville and Santa Clara, Calif. Mr. Barngrover is selling these cattle to make room for the expansion of his herd of registered Herefords.

There are about 40 splendid breeding cows in the offering, and most of their offspring are by Mr. Barngrover's high class herd sire PATRICIAN 5TH.

This is a rare opportunity for the buyer who wants to put some exceptionally high bred, profitable cattle on his range, and the offering will be made in such a way that the buyer of only a few head will have a chance to buy.

NOTE—There is frequent street car and Southern Pacific train service between San Francisco and South San Francisco, and good roads all the way for parties traveling by auto. Mr. Barngrover may be seen personally at the San Francisco Livestock Show where he will exhibit Herefords.

For further information communicate with owner or sales manager.

CACTUS FOR HOGS

A representative of the Cultivator recently came upon a field of spineless cactus in which hogs are allowed to run throughout the year. Parts of the field had stalwart plants six or more feet high, but there were favored forage spots where scores of plants were kept down to stubs less than a foot high. At the time of visit tiny suckling pigs were eating away at every point where the tender pulp was exposed, but they did not bite into any unbroken leaves as did the larger pigs. One red hog of 200 pounds was observed looking up at a gigantic slab two feet long and nearly as wide, but only for a moment, when he reared up on his hind legs, struck down the leaf with his forefeet and began eating it greedily. All this drove of hogs were in splendid condition and the owner was enthusiastic over cactus as a stock food. While it is low in nutriment it stands high as a roughage to properly carry along more concentrated rations.

Sergeant J. R. Young of Madera, writing about rain in the Philippines, states 11.56 inches fell on July 29.

Dairy Champions at Los Angeles

Jolly Senator Raleigh, grand champion Jersey bull, owned by J. E. Thorp.
Shy Lady Viola, grand champion Jersey female, owned by Grant A. Brown.

SOUTHERN HOLSTEIN BREEDERS TO ORGANIZE

During the Los Angeles Livestock Show Holstein breeders of Southern California were entertained at a dinner at the Los Angeles Athletic Club as guests of James J. Jeffries. The occasion was one for mutual congratulation over the splendid exhibit made at the show and resulted in preliminary steps being taken to effect some sort of an organization to look after the promotion and welfare of the breed south of Tehachapi. It is not the intention of the breeders that the new organization shall in any way conflict with the state association, but rather that it shall function as an auxiliary to the parent organization.

Southern California breeders feel that there are many questions and problems that are essentially local in character, and it is proposed that the new association will concern itself in the proper handling of these local matters.

The preliminary work is in charge of Geo. M. Brown and R. A. Condee. A meeting of all interested will be called in the near future.

PROMINENT POLAND MEN VISITING CALIFORNIA HERDS

C. H. Walker, publisher of the Poland China Journal, Kansas City, Missouri, and Hugh Bridges, one of the owners of the famous Wilverdell herd of Poland Chinas, St. Joseph, Missouri, are spending a few weeks in California. It is their plan to visit as many of the Poland China breeders as possible and to learn at first hand the needs and possibilities of California.

The Poland China Journal has accomplished much constructive breed work and Walker says that the future program contemplates a broader policy.

Messrs. Walker and Bridges have been impressed with the opportunities in California and say that Eastern breeders are watching this state with interest. According to Walker, it is expected that the coming winter will see the greatest activity the breed has known.

A CALIFORNIA SALE OF REGISTERED HOLSTEIN COWS

A sale of 100 registered Holstein-Friesian cows to be held by Geo. A. Smith & Son on their ranch at Corcoran on Wednesday and Thursday, November 5 and 6, offers opportunity to all who want Holsteins.

Another remarkable fact is that not one is over three years old. These cows will improve for the next three years and without doubt will be heard from in the future. Being firm believers in the year's semi official test their owners have adopted the policy of placing every cow on a year's test. A number have already finished a year's work and 68 are at present doing yearly record work. This yearly record work is of especial value in the case of heifers with first calf, as it develops and establishes a long lactation period, making persistent milkers with nearly uniform production for the entire period and greatly influencing their production and adding materially to their value and future usefulness for life.

The animals have been tested five times during the last two and a half years.

It is not often that buyers have an opportunity to secure cows bred to a bull whose dam and sire's two nearest dams were all world's record cows.

TO CLOSE OUT HEREFORDS AND DUROCS

G. W. Emmons, proprietor of the Diablo Stock Farm, Danville, who has the distinction of establishing the first herd of Polled Herefords in California, has decided to close out all of his horned Herefords and has instructed Chas. L. Hughes of Sacramento to disperse his herd of 52 head on November 10 in San Francisco. The herd is headed by Bertram Fairfax, a grandson of Perfection Fairfax.

On the same day the entire herd, consisting of 100 head of Duroc-Jerseys owned by Mr. Emmons will be dispersed. Col. Ben A. Rhoades of Los Angeles will be the auctioneer.

JEREY

IT'S not how much milk you get, but how much it costs you to get the milk that counts. Jerseys feed for their well-rounded udder—not beef and bone.

Jersey Milk is of the richest quality with a butter fat average of 5.37%. Jersey milk, Jersey butter and Jersey cheese sell for more on the markets.

Jerseys are adaptable to any climate. They are an asset to their owners, for they mature earlier for milking and are still producing long after other cows have gone dry. Let us tell you more about Jerseys. Write for our free literature.

LOS ANGELES LIVESTOCK SHOW

Continued from Page 575.

that she stood third at Sacramento, and since then she has calved and shows to much better advantage, and while she lacks the thickness of Pacheco Lass 118th, that stood above her at the earlier show, the judge liked her smoothness of covering and her neater head and horn.

The senior yearling, King's Countess, held her accustomed place above Princess Royal, Lancaster Lady and Lavender Queen, the three heifers shown by Dibblee. A Glide entry, Village Lassie, was first in the junior yearlings over Pacheco Lass 148th and Ruby Avon.

The senior heifer calves constituted one of the most attractive classes of the show. The top was outstanding in the precocious white of Pacheco. She has improved since her show in September and came near being made junior champion. The smoothly covered, deep, nicely balanced light roan, Lucy Lee 5th, was second. If she had a more attractive head she might go higher. Pacheco was third with a lovely little red lady. Glide was fourth and another Pacheco entry fifth. Pacheco was first with juniors, Glide second and Dibblee third.

The awards follow:

Shorthorns

Exhibitors: Caledonia Farms, San Francisco; Estate of Thos. B. Dibblee, Santa Barbara; T. S. Glide, Davis; F. L. Hall, Perris; Wm. Henn, Kansas City, Missouri; Merritt-Bowers Co., Tulare; Pacheco Cattle Co., Hollister; University of California, Davis.

Aged bull—Dibblee on Hallwood Flash; 2, Henn on Cumberland Goods. Two year old—1, Glide on Matchless Elite; 2, Pacheco on Pacheco Marshal; 3, Henn on Homer Lord. Senior yearling—1, Dibblee on Bashan Augusta; 2, Pacheco on Dalmeny Count; 3, Glide on Hillcrest Amaranth; 4, Henn on Red Monarch. Junior yearling—1, Henn on Lord Julian's Type. Senior calf—1, Dibblee on Baron Lancaster; 2, Glide on Cheerful Count; 3, Pacheco on Pacheco Cumberland; 4, Dibblee on Orange Villager. Junior calf—1, U. of C. on Memory's Champion; 2, Glide on Spicy Count; 3, Pacheco on Pacheco Bramton; 4, Hall on Avon's Sensation.

Aged cow—1, Glide on Spicy Lady. Two year old—1, Glide on Little Sweetheart; 2, Dibblee on Meadow Village Girl; 3, Pacheco on Pacheco Lass 118th. Senior yearling—1, Glide on King's Countess; 2, Dibblee on Lancaster Lady; 3, Dibblee on Princess Royal; 4, Dibblee on Lavender Queen. Junior yearling—1, Glide on Village Lassie; 2, Dibblee on Ruby Avon; 3, Pacheco on Pacheco Lass 148th. Senior heifer—1, Pacheco on White Pacheco; 2, Dibblee on Lucy Lee 5th; 3, Glide on Village Rose; 4, Pacheco on Pacheco Bloom; 5, Pacheco on Pacheco Blossom. Junior heifer—1, Pacheco on Cumberland Pacheco; 2, Glide on Countess Fortuna; 3, Dibblee on Secret Clipper.

Senior champion bull, Hallwood Flash; reserve, Matchless Elite. Junior champion, Bashan Augusta; reserve, Memory's Champion. Senior champion cow, Little Sweetheart; reserve, Spicy Lady. Grand champion bull, Bashan Augusta; reserve, Hallwood Flash.

Aged herd—1, Glide; 2, Dibblee; 3, Pacheco. Young herd—1, Glide; 2, Pacheco. Calf herd—1, Pacheco; 2, Dibblee; 3, Glide; 4, Pacheco. Get of sire—1, Glide; 2, Pacheco; 3, Dibblee; 4, Dibblee. Produce of dam—1, Dibblee; 2, Glide; 3, Glide.

The Herefords

The Hereford exhibit, while good, was scarcely up to the standard of last year's show. Two Eastern herds, the Hereford Corporation of Wyoming and William Henn of Missouri, both of which won at the Liberty Fair last year, found competition with two California herds, both making their initial show. D. H. Ogden, a progressive cattleman of Alpine, and the Conejo Ranch, Newbury Park, showed great enterprise by exhibiting. While neither of the local herds had been fitted, they served to indicate the real beef making qualities of the Whiteface.

Wallace Good of Kansas City made the awards and in several cases opened the way for criticism.

The rating of the two aged bulls was comparatively easy. The Ogden entry lacked the scale of the winner and was further handicapped by lack of fitting.

In the two year olds the judge surprised most everyone, even the exhibitors, when he tied Bonnie Laddie above Anxiety Fairfax. The latter bull had been conceded the winner. He has more scale than the winner, as much quality and a more attractive head and horn. Henn also had the third and fourth places. Henn showed four in the senior yearling class without competition. The Hereford Corporation took first, second and fourth on junior yearlings and Henn was third. The winner was a remarkably low set, heavy boned youngster, level of lines and balanced throughout. His position was not questioned and he had friends for premier place. The Henn calf looked well in second place.

A Wyoming calf stepped in front of the seniors. Henn was second and Ogden third with a burly calf that would have gone higher with more fitting. The two juniors stood first for Wyoming and second for Ogden.

In the female classes the competition was not keen except in the younger classes. The Wyoming aged cow easily stood first over the Conejo entry shown thin. The two year olds were led by Miss Rialto, the Wyoming heifer. Miss Rialto has not been defeated in class this year. She is sweetly feminine, accurate in her conformation and thickly and smoothly covered. She met no serious opposition to the championship.

Only two junior yearlings were shown, both from the Wyoming herd.

The senior and junior heifer calf classes were won by the Hereford Corporation, with Ogden standing a close second on account of condition. In fairness to the Ogden cattle it should be said they were shown "as is"—none having the advantage of extra milk.

Most of the group classes lacked competition, but in the get of sire the Ogden calves would have looked well up two notches higher.

The awards follow:

Herefords

Exhibitors: Conejo Ranch, Newbury Park; Wm. Henn, Kansas City, Missouri; D. H. Ogden, Alpine; The Hereford Corporation of Wyoming, Cheyenne, Wyoming.

Aged bull—1, Hereford Corp. on Wyoming Prince; 2, Ogden on Beau Rupert. Two year old—1, Hereford Corp. on Bonnie Laddie; 2, Henn on Anxiety Fairfax; 3, Henn on Bocalda 12th; 4, Henn on Arlington 2nd. Senior yearling—1, Henn on Royal Rupert; 2, Henn on Dare, 3, Henn on Prospect; 4, Henn on Wonder Lad 2nd. Junior yearling—1, Hereford Corp. on New Era 2nd; 2, Hereford Corp. on Wyoming Fairfax 4th; 3, Henn on Fairfax Lad 23rd; 4, Hereford Corp. on Gold Dust 3d. Senior calf—1, Hereford Corp. on Wyhampton 22nd; 2, Henn on Labor Day; 3, Ogden on Cal. Real Jr. Junior bull—1, Hereford Corp. on Wyoming Fairfax 8th; 2, Ogden on Killarney.

Aged cow—1, Hereford Corp on Miss Dale; 2, Conejo on Fae. Two year old—1, Hereford Corp. on Miss Rialto 2nd; 2, Conejo on Desdemona; 3, Conejo on Princess Louise; 4, Conejo on Katy A.; 5, Conejo on Sallie Delaware 2nd. Junior yearling—1, Hereford Corp. on Miss Dare 11th; 2, Hereford Corp. on Miss Dare 10th. Senior calf—1, Hereford Corp. on Miss Era 14th; 2, Ogden on Ramona; 3, Ogden on La Junta. Junior calf—1, Hereford Corp. on Lady Fairfax 5th; 2, Hereford Corp. on Lady Fairfax 4th; 3, Ogden on Loretta.

Senior champion bull—Bonnie Laddie. Junior champion bull—New Era 2nd. Senior champion cow—Miss Rialto 2nd. Junior champion heifer—Miss Era 14th. Grand champion bull—Bonnie Laddie. Grand champion heifer—Miss Rialto 2nd.

Aged herd—Hereford Corp. Young herd—Hereford Corp. Calf herd—1, Hereford Corp; 2, Ogden. Get of sire—1, Hereford Corp.; 2, Conejo; 3, Conejo; 4, Ogden. Produce of cow—1, Hereford Corp.; 2, Ogden.

Aberdeen-Angus

Congdon and Battles, North Yakima, Washington, had the only exhibit of Angus cattle. The showing attracted a great deal of attention and included some of the best doddies ever seen at a California show.

DAIRY CATTLE

Compared to the showing made at the Liberty Fair last year, no department registered greater improvement than was noted in the exhibit of dairy cattle. Every important breed was represented, and in view of the fact that most of the entries were from Southern California herds the show was a distinct surprise. As one prominent breeder remarked, it was the first time he had appreciated the real development that had taken place during the past few years. While the Holsteins were in the lead, the interest noted during the judging of all classes was keen. The dairy industry of Southern California has already reached large proportions, but the real development is just ahead, and such shows as the one just held will prove powerful factors in the building of this essential industry.

The Holsteins

With more entries than the other breeds, with classes that taxed the capacity of the judging ring and some of which were characterized by Judge Jno. B. Irwin of Minneapolis as being good enough to represent any show, the exhibit of Holsteins marked the greatest showing ever made by the

black and whites in Southern California.

Merci Lad Korndyke Burke carried the Baldwin colors through the aged bull class and on to the championship, although the sailing was not smooth all the way. Handicapped by the loss of one eye, his scale, immense depth, style and quality were sufficient to land him at the top. He can be criticized for a narrowness throughout. Sanders of Arizona was second with an attractive bull, Stalder was third and Frampton Bros. landed last year's winner in fourth place.

One of the most popular bulls of the show led the two year olds. This bull, Dichter Spofford Korndyke Lad 5th, owned by the George Junior Republic, and nicely fitted, is "bad medicine" in most any show. Santa Anita was second, Sanders third and Stalder fourth.

Burr Farm won the senior yearling class over Sanders, and the winner was afterwards made reserve junior champion. Only one junior yearling was in the ring.

The senior bull calves furnished the junior champion in the Sanders entry, King Elnora Segis Pontiac. Jeffries was second with a son of King Segis Pontiac Jannek. Stalder was third over the George Junior Republic and the Baldwin entry was fifth.

The class for junior bull calves was strong in number and quality. Jeffries was first over the field, Stalder second, Burr third, University of California fourth and Steiner fifth. The female classes brought out a strong showing. The judge insisted on type, size, quality, capacity and udders, and occasionally in his search he was inclined to favor type at the expense of size. The nine aged cows were topped by Topsy Clothilde Hengerveld from the Burr Farm. Her neat head and neck, ample heart and capacity and stronger top put her above Mary Altoana Pontiac from Santa Anita. The second cow was a bit wider through the hips but her udder was swung rather low.

Belle Julianna De Kol, standing third, was shown at a disadvantage, being heavy with calf. Frontier Korndyke Pontiac, a nicely balanced cow with a good udder, was a trifle shy on capacity and lacked size for a mature cow.

The three year olds were easily topped hy Bessie Segis Pontiac 2d, afterwards senior and grand champion. George Junior Repuhlic went to the front in the two year olds with Snowflake Julianna of Rock. Santa Anita took second and third over a Stalder entry.

The eight senior yearlings were aligned with the junior champion, Duchess Ormsby Sadie Vale heading the class. Ida De Kol Pearl Lyons was hardly so fine as the winner but showed more width throughout than Anoakia Cornucopia Walker in third.

The good lines and general fineness throughout, together with a better udder, won the junior yearling class for the Baldwin entry. The Jeffries entry in second was larger and put together on a more open plan. The third heifer was attractive and rather awkward in the ring.

Sixteen senior heifers taxed the capacity of the ring and the time of the judge. It was a particularly good class and the winner, a stylish straight lined heifer of excellent balance and dairy conformation, was made reserve junior champion. The junior class was won by a Jeffries entry over a field of good young things. The awards follow:

Holstein-Friesian

Exhibitors: Anita M. Baldwin, Santa Anita; A. J. Stalder, Riverside; Burr Farm, Los Angeles; California George Junior Republic, Chino; Frampton Bros., Artesia; Frank Reed Sanders, Chandler, Arizona; Los Angeles County Farm, Hondo; Leo Steiner, Lawndale; University of California, Davis; James J. Jeffries, Burbank.

Aged bull—1, Baldwin on Merci Lad Korndyke Burke; 2, Sanders on King Pearl Segis Pontiac; 3, Stalder on King Pontiac Netherland Segis; 4, Frampton on Segis Pontiac De Kol Burke Clyde. Two year old—1, Geo. Jr. on Dichter Spofford Korndyke Lad; 2, Baldwin on Prince Walker Cornucopia; 3, Sanders on Prince Hengerveld Paltz De Kol; 4, Stalder on Rosamaines Pontiac Netherland. Senior yearling—1, Burr on Sir Manuel Korndyke; 2, Sanders on Prince Mayola Pontiac. Junior yearling—1, Sanders on Palo Verde King Pearl Pontiac. Senior bull—1, Sanders on King Elnora Segis Pontiac; 2, Jeffries on K. S. P. J. Novelty King; 3, Stalder on Rosamaines Pontiac De Kol Keeva; 4, Geo. Jr. on Blanca Spofford Pontiac; 5, Baldwin on Major Walker Beets. Junior calf—1, Jeffries on K. S. P. J. Count; 2, Stalder on Rosamaines Pontiac Gerben; 3, Burr; 4, U. of C. on Korndyke Senorita Boy; 5, Steiner on Hiske Alban.

Aged cow—1, Burr on Topsy Clothilde Hengerveld; 2, Baldwin on May Altoana Pontiac; 3, L. A. Co. Farm on Bell Julianna De Kol; 4, Sanders on Frontier Korndyke Pontiac; 5, Stalder on Gerben Abhekerk Maid. Three year old—1, Burr on Bessie Segis Pontiac 2nd; 2, Stalder on Aralia Pontiac; 3, Baldwin on Anoakia Pontiac. Two year old—1, Geo. Jr. on Julianna Darington of Rock; 2, Baldwin on Anoakia Pontiac; 3, Baldwin on Anoakia Korndyke; 4, Stalder on Abbekerk Pontiac. Senior yearling—1, Burr on Duchess Ormsby Sadie Vale; 2, Geo. Jr. on Ida De Kol Pearl Lyons; 3, Baldwin on Anoakia Cornucopia Walker; 4, Stalder on Stanislaus Belle Hengerveld; 5, Sanders on Lady Sethje Mooie Pontiac. Senior champion cow—Bessie Segis Pontiac; reserve, Topsy Clothilde Hengerveld. Junior champion heifer—Duchess Ormsby Sadie Vale; reserve, Palo Verde King Pearl Piebe. Grand champion bull—Merci Lad Korndyke Burke; reserve, King Elnora Segis Pontiac. Grand champion cow—Bessie Segis Pontiac 2nd; reserve, Duchess Ormsby Sadie Vale.

Aged herd — 1, Baldwin; 2, Stalder. Young herd—1, Jeffries; 2, Sanders; 3, Stalder; 4, Baldwin. Calf herd—1, Jeffries; 2, Sanders; 3, Stalder; 4, Baldwin. Get of sire—1, Jeffries; 2, Sanders; 3, Jeffries; 4, Stalder. Produce of dam—1, Sanders; 2 L. A. Co. Farm; 3, Burr; 4, Stalder. Five cows in milk—1, Stalder.

The Jerseys

While lacking in number, the quality of the Jersey show was excellent. The Thorp herd from the North, that has been seen at most of the earlier fairs, met strong competition at the hands of a number of the best herds of the South.

Thorp had a comparatively easy time in the bull classes, getting both championships. Jolly Senator Raleigh added another purple to his long string of wins.

The fact that the state fair winner, Salome of Mossdale, stood third at this show indicates the strength of the exhibit. Grant A. Brown won with Shy Lady Viola, the grand champion of the show. Sanders was second with Honeysuckle's Maid. Desert Honeysuckle was the winner among the two year olds over California Owl's Rose shown by the university. Thorp took the two top places in the senior yearling class. Brown won the junior yearling class with Financier's Daisy Witch.

The junior champion and reserve grand champion fell to Owl's Mermaiden Fern shown by the university in the senior calf class. Sanders won the baby class.

Ed Carey of Carlton, Oregon, rated the Jerseys.

Jerseys

Exhibitors—Grant A. Brown, El Monte; E. S. Haas, Downey; Frank Reed Sanders, Chandler, Arizona; J. E. Thorp, Lockeford; University of California, Davis; J. E. Wherrell, Riverside; Winsor Ranch, Bonita.

Aged bull—1, Thorp on Jolly Senator Raleigh; 2, Haas on Valet's Native Son of L. Senior yearling—1, Thorp on Golden Legacy's Champion. Senior calf—1, Thorp on Biddy's King of Mossdale; 2, Winsor on Beauty's White Sox; 3, Brown on Shylock's Monte. Junior calf—1, Thorp on Jolly Ben of Mossdale; 2, Wherrell on Promise's Handsome Pedro.

Aged cow — 1, Brown on Shy Lady Viola; 2, Sanders on Honeysuckle's Maid; 3, Thorp on Salome of Mossdale; 4, Brown on Conquest's Neilie; 5, Thorp on Eminent's Wardress. GRAND CHAMPION

HAMPSHIRES

20 Ribbons at Los Angeles Livestock Show

Seven herds competing, our Hampshires have to their credit the largest number of winnings in the 1919 show ring, viz: 20 ribbons as follows: 2nd on aged boar Lookout Cherokee; 5th on Simple Simon (same class); 3rd on junior yearling boar by Director; 1st on senior boar pig, Chong, by Director; 1st on Director Jr. Pride, by Director; 4th on Jiggs, by Maloy's Controller; 5th on Little Son, by Director Jr.—all three in junior pig class; 2nd and 4th on senior yearling sows; 3rd on senior sow pig; 2nd and 4th on junior sow pigs; junior champion boar, reserve junior champion boar; senior champion boar, and reserve grand champion boar; 2nd on boar and 3 sows under year; 2nd on 4 animals, either sex, any age, get of one boar; 1st barrow any age; 2nd on pen.

High class young stock for sale at all times.

Address: L. A. Denker, Saugus, Los Angeles County, Cal.

Business Herd Hampshires

The pioneer grand champion herd of Hampshires is directly responsible for the growing interest in the Hampshire breed today.

It has brought to light the winning blood lines in our big shows. It has furnished foundation stock for numerous new herds throughout the state and is still doing so; 200 pigs bred, bred sows, and sows with litters for sale.

Llano Vista Rancho, F. A. Langdon, Mgr., Perris, Cal.

A Few Big, Roomy, Arch-backed Sows and Gilts of Choice Breeding For Sale—Bred For Fall Litters

O.U.R. Hampshire Swine

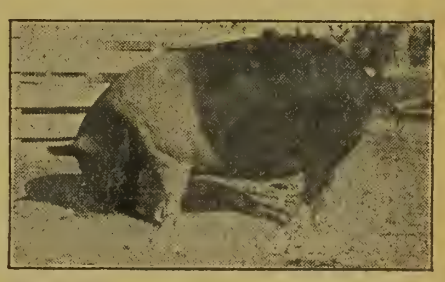
Weanling pigs of both sexes at very reasonable prices. Visit the ranch and see these animals.

Ortega-Underhill-Rancho THOS. T. DINSMORE, Mgr. Santa Barbara, Calif.

Three fine Junior Yearling Boars of unsurpassed breeding and high individual merit.

The Poplars----Hampshire Headquarters

Our reserve grand champion sow Wavelet at the big Los Angeles show is the mother of 8 little Wavelets—a flourishing family. We won 1st on boar and 3 sows bred by exhibitor, also 3 other herd prizes. We were in the money on aged boar, twice on junior yearling boar, and once next the top on junior boar pig. All young stock the get of our great boar, The Harvester Again. Write us your wants.



C. J. Gilbert **Lancaster, Cal.**

FOR SALE

Major Sierra Llano

First prize Senior Yearling at the recent Southern California Fair. Sired by Gold Mine, Grand Champion Boar at the California State Fair, 1916. Dam — Western Favorite, Champion Sow at the same show. I cannot well use Major any longer in my herd and therefore offer him at a very reasonable figure. An opportunity to get a good herd boar cheap.

GEORGE I. LYTLE
PERRIS, CAL.

High Class Hampshire Hobby

The prize winning junior yearling boar Black Beauty at head of herd.
Hampshire Type—Hampshire Size—Hampshire Quality
At San Francisco, November 1-8.

ROY E. FISHER Lincoln, Neb.

Better service is assured by the advertiser if when writing you mention the California Cultivator.

Caledonia Farms' Shorthorns

Farms: West Sacramento, Yolo Co., Cal. Office: 57 Post St., San Francisco

IMPORTED CALEDONIA

One of the Largest Herd in America

One of the Choice Collections of the Breed

The above statement is made with due regard to facts and is justified by opinions expressed by many of the leading authorities of the breed. When judged from any point—the character of the herd bulls, the quality, breeding, uniformity of type noted in the females, is such as to impress the most critical and to suggest that CALEDONIA SHORTHORNS are destined to play an important part in the affairs of the breed. Western breeders, in particular, can look to this herd with complete confidence as a source for breeding stock the equal of any produced in America. The established policy of the herd will be to hold fast to the traditions of the breed, to breed the most acceptable type and to offer the productions of the herd at prices based on sound values, and to encourage the establishment of small herds in California.

HERD BULLS

Even before Caledonia was imported as a calf, he was marked as one of the herd bull prospects of Scotland. Sired by the great Duthie bull, Proud Emblem, reckoned as one of the greatest bulls of the breed, and out of Rosewood 105th, one of the grandest cows in the Anderson herd, he came to America with a rare inheritance. From the time he sold as a junior yearling for $7500 he has been watched with the keenest interest, and as he developed he was accorded the distinction of being rated one of the most valuable bulls ever imported. When in search of a herd bull of the highest character, CALEDONIA was an inevitable choice, and he comes to California with the respect of the entire Shorthorn fraternity. He will be given a wide opportunity in this herd with full confidence that he will leave a high and lasting impression on the Shorthorns of the Pacific Coast.

GAINFORD MATCHLESS, a son of the champion, IMP. GAINFORD MARQUIS (a sire with few equals), represents to a high degree those qualities we believe are essential to the best in Shorthorns. His breeding is beyond criticism and he combines unusual scale (as a two-year-old he weighs 2500 pounds) and marked quality. His individuality is indicated by the fact that he was first in his class at the International last year. It was largely the outstanding and uniformly good calves sired by him that determined us to own him. In every way GAINFORD MATCHLESS can be rated as a top bull and we are certain that Shorthorn interests will accord him a high place. See this great bull at the California International Livestock Show.

PINE GROVE KING, sired by the champion, KING CUMBERLAND, by Cumberland's Last, and from a CLIPPER dam, by the celebrated Missie Champion, has proven his ability in this herd as a sire of note. He is a very thick fleshed bull and stands on as short legs as any bull of the breed. Calves by PINE GROVE KING will find their way to many of the best herds.

SELECT SULTAN, a roan yearling of most promising outlook, fine individuality and wonderful breeding. He is by the grand champion "Selection" by "Avondale" by the peerless "Whitehall Sultan." His dam "Village Nell 2nd" by the celebrated "Fair Acres Sultan," the best breeding son of "Whitehall Sultan", 2nd dam by the great Imp. "Villager"; next three sires "Golden Favorite," "Bapton Diamond" and "Bapton Ensign" to the imported cow "Nellie of Carlogie 5th" from the renowned herd of R. Taylor.

THE FEMALES

The collection of females in the CALEDONIA herd ranks as one of the truly great collections of the breed owned in America. Over 300 head are in the herd and among them are represented nearly every important Scotch and American family. Scale, constitution, substance, thick flesh and marked quality are outstanding. As evidence of the character of the breeding matrons it is significant that the dam of the sensational world's champion steer of 1916; the champion Shorthorn steer of 1918 and the highest priced Shorthorn bull ever sold at public auction on the Pacific Coast, were produced in this herd. A number of her half sisters are still in our pastures. To attempt a detailed description of the female division of the herd is quite out of the question. A personal inspection would be convincing and all who are interested are cordially invited to visit the herd.

Caledonia Shorthorns in San Francisco Sale, Nov. 6

It is not our intention to maintain the herd at its present proportions and we are therefore in a position to offer some exceptional values—values that can hardly be duplicated in any herd. Established breeders or men about to enter the business will be serving their own interests if they make a careful investigation of this herd. In the sale to be held at San Francisco, Wednesday, November 6, we will consign 14 females, consisting of bred cows with calves at foot and bred to our herd bulls, and heifers bred to the above bulls. Most of the consignment will represent desirable Scotch breeding and the sale will afford the first opportunity to secure females bred to Imp. Caledonia and Gainford Matchless. We also have a choice lot of females to sell at private treaty and offer an extra lot of good young bulls suitable for range work. They are well developed, heavy boned, thick fleshed rugged fellows that are the kind to improve the size and quality of market steers. The prices are attractive.

reserve, Oxford's Nora's Pretty Daisy. Grand champion bull, Jolly Senator Raleigh; reserve, Biddy's King of Mossdale. Grand champion female, Shy Lady Viola; reserve, Owl's Mermaiden Fern.

Aged herd—1, Thorp. Young herd—1, Thorp. Calf herd—1, Brown; 2, Thorp. Get of sire — 1, Sanders; 2, Thorp; 3, Brown; 4, U. of C. Produce of dam—1, Sanders; 2, Thorp; 3, Sanders; 4, Thorp. Cows in milk, five animals—1, Thorp.

Guernseys

Interest in the Guernsey classes was increased by reason of the winnings of the Dupee cattle at the recent National Dairy Show. This herd furnished the grand champion at Chicago in the senior yearling bull, Dauntless of Edgemoor. This bull was not shown at Los Angeles. However, Dupee had the grand champion bull in Itchen May King and the junior champion in Inspiration of Edgemoor. The Edgemoor herd walked off with all the female championships. James Marwick had the only entry in senior yearling bulls.

A. B. Humphrey of Escalon furnished stiff competition in nearly all classes, winning the two year old, junior yearling and junior bull calf classes. Ed Carey of Oregon judged the Guernseys. The awards follow:

Exhibitors: W. H. Dupee, Santee; A. B. Humphrey, Escalon; James Marwick, Santa Barbara.

Aged bull—1, Dupee on Itchen May King; 2, Humphrey on Bullion of Edgemoor. Two year old—1, Humphrey on Escalon Challenger. Senior yearling—1, Marwick on Mysie's Linden Boy. Junior yearling—1, Humphrey on Nobleman of Maple Hill. Senior calf—1, Dupee on Inspiration of Edgemoor; 2, Humphrey on Escalon Dandy. Junior calf—1, Humphrey on Escalon Truetype; 2, Dupee on Chesterfield of Edgemoor.

Aged cow—1, Dupee on Cheminante 11th; 2, Dupee on Mildred 2nd of Lee Godaines; 3, Humphrey on Fairy of Alfalfa Farms. Three year old—1, Dupee on Merry Queen of Edgemoor. Two year old—1, Dupee on Merry Lady of Edgemoor; 2, Humphrey on Escalon Fairy; 3, Dupee on Royal Dame of Edgemoor. Junior yearling—1, Dupee on Victorine of Edgemoor; 2, Dupee on Duchess of Edgemoor; 3, Humphrey on Calla Grove Merry Princess. Senior calf—1, Dupee on Patroness of Edgemoor; 2, Dupee on Muriel of Edgemoor; 3, Humphrey on Escalon Lassie; 4, Humphrey on Escalon Maggie. Junior calf—1, Dupee on Dancing Girl of Edgemoor; 2, Dupee on Bar Maid of Edgemoor; 3, Humphrey on Escalon Rose; 4, Humphrey on Escalon Flossie.

Senior champion bull — Itchen May King; reserve, Escalon Challenger. Junior champion bull—Inspiraiton of Edgemoor. Senior champion cow—Cheminante 11th; reserve, Merry Lady of Edgemoor. Junior champion heifer — Victorine of Edgemoor; reserve, Patroness of Edgemoor. Grand champion bull—Itchen May King. Grand champion female—Cheminante 11th.

Aged herd — 1, Dupee; 2, Humphrey. Young herd—1, Dupee; 2, Humphrey. Calf herd—1, Dupee; 2, Humphrey. Get of sire—1, Dupee; 2, Dupee; 3, Humphrey. Produce of dam—1, Dupee; 2, Humphrey. Cows in milk (5)—1, Dupee.

Fat Cattle

Exhibitors: Congdon & Battles, Yakima, Washington; T. S. Glide, Davis; University of California, Davis.

Steer or heifer one year and under two—1, U. of C. on California Thickset 3rd; 2, Glide on Cheerful Maid 4th. Steer or heifer under one year—1, Congdon & Battles on Ericaman C. B. 2nd; 2, U. of C. on California Yeomanette; 3, U. of C. on California Thickset 4th; 4, Congdon & Battles on Ericaman C. B. 3rd. Champion steer or heifer—Ericaman C. B. 2nd.

Ayrshires

The Elkhorn herd, owned by J. Henry Meyer, met competition in but four of the female classes in which the Universtiy of California had entries. Highland Ithan, grand champion at Sacramento, again won premier honors, but Imp. Holehouse Secretary, champion at the state fair, went down to defeat for top honors, when his younger stable mate, Elkhorn Public Opinion, was awarded the purple by Judge Carey.

Other Dairy Breeds

F. L. Hall, Perris, made a small exhibit of milking Shorthorns. Frank Reed Sanders showed a few Dutch Belted cattle.

Other awards and illustrations next week.

THE SHEEP SHOW

As noted at other California fairs, the sheep department was woefully lacking in entries. The University of California had a small display of Shropshires, Rambouillet, Hampshires and Southdowns and fat wethers. Aside from the Hampshire classes in which the Calla Grove Farm, Manteca, had entries, the state institution had no competition.

California sheep breeders should adopt a more progressive policy in the matter of showing than they have displayed in the past.

TULARE COUNTY POLAND CHINAS AVERAGE $153

The Tulare County Poland China breeders held a very successful sale at Tulare October 21. Fifty-two head, mostly bred sows, were sold for an average of $153. Hugh C. Shinn sold the top sow to Paul Sheppa of Tulare for $405. A. J. Elliott sold the second highest priced sow to H. G. Ball of Tulare for $330. The sale was well attended by both farmers and breeders.

Many animals went to farmers of Tulare County, where the interest in Poland Chinas is very keen, and a number of new herds are being started.

Col. Bell did effective work on the block.

The association will hold another sale in the spring, date to be announced later.

Following is list of sales:

THE BERKSHIRE SALE AT LOS ANGELES LIVESTOCK SHOW

The Western Berkshire Congress held a consignment sale on Wednesday afternoon, October 22, in one of the judging pavilions of the Los Angeles Livestock Show. The offering was made up of bred sows and gilts, a few open gilts and a few boars. The top of the sale was the grand champion sow at the Los Angeles show, Castleview Premier Belle, consigned by J. Francis O'Connor and sold to F. L. Hall, Perris, for $510. Leader's Invincibella from the same herd went to the Whittier State School for $350. Geo. A. Stingle of El Monte secured a daughter of Star Leader, consigned by Anchorage Farm, Orland, for $300. The average, including the young gilts and boars, was $135.50. Ord L. Leachman of Sacramento was the auctioneer.

Following is report of the sale in detail:

1, J. F. O'Connor, Santa Rosa, $90.
2, D. J. Bastanchury, La Habra, $190.
3. D. J. Bastanchury, $100.
4, Italian Vineyards, Guasti, $75.
6, California Truck Co., Los Angeles, $190.
7, California Truck Co., $140.
8, Whittier State School, Whittier, $140.
9, D. J. Bastanchury, $100.
10, Geo. A. Stingle, $75.
10-A, J. F. O'Connor, $50.
12, Geo. A. Stingle, $60.
13, California Truck Co., $95.
14, California Truck Co., $85.
15, F. L. Hall, Perris, $510.
16, Whittier State School, $350.
17, D. J. Bastanchury, $280.
19, Frank B. Anderson, Sacramento, $90.
20, D. J. Bastanchury, $100.
21, D. J. Bastanchury, $100.
22, D. J. Bastanchury, $75.
24, E. H. Kennard, Los Angeles, $100.
27, F. L. Hall, $75.
28, California Truck Co., $130.
30. Geo. A. Stingle, $300.
31, Geo. A. Stingle, $75.
32, J. Donaldson, Perris, $100.
34, Geo. A. Stingle, $100.
35, Geo. A. Stingle, $70.
36, A. B. Humphrey, $60.

Exposition Grounds, San Francisco

Under Auspices of

Pacific Coast Hereford Cattle Breeders Association

J. I. Cazier, President, Wells, Nev. J. A. Bunting, Secretary, Mission San Jose, Cal.

Now Is the Time to Buy Herefords

The demand for registered Herefords far exceeds the supply in the West, and besides the rapidly increasing volume of local demand, foreign buyers are limited in their purchases here only because of the scarcity of Herefords for sale. There is a keen need for the product of hundreds more Hereford breeding herds throughout the Pacific Coast states, and the man who has the foresight to recognize that fact and establish a herd right now is certain to achieve success.

This Sale an Opportunity to Secure Correct Foundation Stock

To place before the public a group of registered Herefords that would completely surpass in breeding, individuality, and quality, any offering of the breed previously made in the West, a Committee went into the leading herds and made selections from among the tops. It has meant genuine sacrifice to permit many of these selections to go out of their respective herds, and the greatest recompense that can come to the sellers will be the fact that new herds will be founded upon substantial animals, and the progress of the breed stimulated thereby.

Great Females in this Sale

To describe every richly bred female in this sale would require practically a recital of the entire sale catalog, with its splendid showing of prize winners and proven breeding matrons. When we add to their individual qualifications the fact that most of them are bred to such bulls as Cazier's $10,000.00 BEAU BLANCHARD 76TH; Barngrover's PATRICIAN 5TH; Bemmerly's NEW ERA 2ND and BONNIE BRAE 96TH; Gable's DON PERFECT 2ND and DIAMOND FAIRFAX; Diablo Stock Farm's BERTRAM FAIRFAX and WITCHFORD; and Bunting's ANXIETY FAIRFAX and ALEC, the result is a combination of breed quality that should prove most attractive to the buyer of the better sorts.

Bulls of Outstanding Merit

The presence in the sale list of two Grand Champion Bulls, SONOMA, winner at the Denver Livestock Show, consigned by Chas. Rule, and CALIFORNIA PRINCE DONALD, winner at 1918 California State Fair, consigned by J. A. Bunting, lends added attractiveness to a bull offering that is of high character throughout. NEVADA LAD 2ND, consigned by W. J. Bemmerly; NEVADA LAD 8TH, consigned by J. H. Cazier & Sons Co.; and WITCHFORD, consigned by Diablo Stock Farm, are bulls that would attract attention in any company.

BASSETT'S
Advanced Type of Poland Chinas

won at Los Angeles Livestock Show Grand Champion Sow—all championships in sow classes—all boar classes except one and all herd classes. Grand Champion pen of barrows.

Bassett's Poland Chinas are the profitable kind for farmer and breeder alike. Stock for sale at all times.

M. Bassett & Son **Hanford, Cal.**

Strong and Vigorous

Young Poland China boars sired by Joe's King, one of the good boars on the coast. These young boars are just ready for service, will grow big like their sire, and will sire quick growing pigs. These are the kind pork producers want. We will price them right. Write for full description.

Les McCracken ***Ripon, Calif.***

Matchless Big Bob

has proven a sire of remarable big type, growthy Poland Chinas. Recent sales, both public and private, stamp him as one of the leading sires on the coast. Don't you want one of the "make good" kind? Write for description of what you desire.

Geo. V. Beckman & Sons, Lodi, Calif.

Big Type Poland Chinas

At the Big Los Angeles Livestock Show our big type Boar El Profito 296867 was made grand champion of the show. El Profito is a two year old son of the noted Big Long Jumbo, dam Black Big Bone Princess.

One of our leading brood sows, Big Helen 690780, is likewise a daughter of Big Long Jumbo. Have also 2 fall yearlings by Big Bob—one of these has litter by Buster's Model. These are strictly select big type Poland Chinas. Correspondence solicited and visitors welcome. One mile east of town.

Viola L. Renwick, Santa Barbara, Cal.

Big Model Fellow

The boar nobody could fault. At State Fair he was first senior yearling and reserve grand champion. You can easily see he is high, long, deep, and smooth as a pig. Has a great ham and stands upon his toes. He's a breeder and his pigs show his good pork making qualities.

J. F. McSwain, Merced, Calif.

KEEPING AHEAD

That's my motto. The kind of Poland Chinas bred by me is what's keeping me ahead. SMOOTH KING, by Kansas King, a boar of quality, has recently been added to my herd. My kind are your kind. A few choice young boars and gilts for sale. Write,

Eugene Miner **Lodi, Cal.**

Get One Quick

A select lot of young Poland China boars of the correct type. Will make great herd headers. Best judges say they are the kind wanted. Write me for particulars.

J. F. LEHMAN **LODI, CAL.**

See me at the San Francisco Show.

UNIVERSITY CIRCULAR GIVES MILKING MACHINE RESULTS

That the modern milking machine is a practical and safe labor saving device is the conclusion drawn from experiments with milking machines conducted in the dairy herd at the University of California farm during the past three years, according to a bulletin written by Professor F. W. Woll and just issued by the college of agriculture.

Machine milking gives in general as good results as regards milk production during entire lactation periods as does hand milking, provided the milking is done with equal care in both cases. This result is declared to be in accordance with evidence obtained by other American experiment stations and with practical experience.

According to the bulletin the dairy industry has now entered upon an era of machine milking. Herds of 30 or more cows soon will be equipped for machine milking, and in many cases milking machines may also be introduced to advantage in smaller herds.

There are at present said to be at least eight different makes of milking machines on the market in this state which may be confidently expected to give satisfactory results in the hands of a careful operator. Milking machines call for a fair degree of intelligence and resourcefulness on the part of the operator, although the machines have now been improved in simplicity and mechanism so that they are practically "fool-proof".

The saving in cost of milking by machine over hand milking is stated to be greater in the case of large herds than in small ones and will, in general, be in proportion to the size of the herd. While machine milking will have no appreciable effect one way or the other on the dairy production of the cows or on the general welfare of the herd, with proper care and careful, prompt hand stripping, machines will not long render satisfactory service with careless handling and lack of cleanliness. They are therefore most likely to prove successful when operated by the owner himself or by help directly interested in their success.

RANCHO DEL SUR DUROCS

The big junior champion boar, Orion's King Gano at the Donald H. Graham ranch at Lancaster has got into the limelight as a sire of strictly high class Durocs. Five strings of his young sows are to be retained in the herd as foundation sows par excellence. In breeding form only "Gano" now stands at 630 pounds, with a 200 pound differential for show form. But Graham has planned to keep the boar in service this year, deferring further showyard honors till 1920. This big senior yearling is as smooth and active as when seen at Liberty Fair and is likely to spring one of the surprises of the future. Mr. Graham has another great sire in the senior yearling, California Orion Cherry King, a boar bred in the purple and showing up a line of get equal to the best. A late accession to the herd of brood sows consists of a trio of select sows from middle west herds—Illinois, Iowa and Nebraska. One of these is Sensation Pet, daughter of Big Sensation, a son of Sensation 2d—Nebraska grand champion, 1916. This big, smooth, high backed two year old is raising a fine litter of eight by Chief Sensation, he by Great Wonder I Am—the largest boar of the breed. Mollie's Orion 3d is a fine junior yearling by Van's Orion Cherry King, the boar whose get won 20 prizes at the Illinois state fair last year. Special Critic is a daughter of King the Col. She is raising a nice litter of seven by Pathfinder's Likeness, the Iowa grand champion of 1918. This is the blood that is to put the Rancho Del Sur Durocs at the top of the California line-up for 1920. A dozen crack young boars are now ready to go to new breeding herds. These are from leading brood sows in the herd.

SUGGESTIONS AS TO ANTHRAX

The disease of anthrax which has visited a few sections of the state is so dreaded that a report of its occurrence will almost start a panic. It exists in but very few counties and there is no need for undue alarm; in fact, the state department of agriculture issued a statement that "conditions are no worse than in former years and are under better control than any previous year." The report adds:

Prophylactic and control methods are well worked out for anthrax, and even when the disease already exists in a herd it can be checked if proper steps are taken. The following rules have been laid down by Dr. J. P. Iverson, chief of the division of animal industry, in all cases where animals die in a suspicious manner:

Call upon nearest state representative or veterinarian, if one is available.

Cut off an ear of the animal, place it in a fruit jar, seal tight, box up and send by express to Division of Animal Industry, Sacramento. (It is unlawful to send by U. S. mail.)

Burn carcass where it lies at once. Do not skin the animal.

Remove rest of animals to new quarters if possible or keep in corral. Feed hay when available for one or two weeks.

Vaccination for protection and curative purposes requires special advice, and since no two cases can be handled alike it is advised that the state representative be consulted or a reputable veterinarian employed. However, the double spore method has been found uniformly successful and safe to use for protectioon purposes before the disease has made its appearance in a herd.

GUERNSEYS

196 — 368

These figures represent the average butter fat production of a grade herd in Minnesota before and after the use of a pure bred Guernsey bull. The improved herd brought the owner prosperity.—the original, only drudgery. Write to breeders for descriptions and prices and send for our free booklet, "The Grade Guernsey."

WELL FED COW MAKES THE PROFIT

Records of cow testing associations go to show that it is the well fed cow that makes the profit. Often the man who is keeping ten cows would make more profit if he sold two or three of the poorest and gave all the feed to the others, says C. H. Eckles, chief of the dairy division of the Minnesota university farm.

"Owners should see first of all," says Mr. Eckles, "that the dairy cow has the necessary raw material from which to make milk. It requires a long experience for some cattle owners to realize that it pays to feed a cow well. The fact is that the dairy cow is a milk factory and like all factories requires considerable of what is called in connection with business enterprises 'overhead charges'.

"The cow first takes out enough from the ration to maintain her body, and this is about the same whether she is milking heavy or giving only a few pounds. She can produce milk only with that part of her ration that she receives above what is required to support life. A cow of medium quality uses at least half of a full ration to support her body, and the second half of her ration is the only part she can use to produce milk. If she does not receive a full ration, she does the only thing possible to do—cut the milk flow to fit the feed.

"The point is that after going to the expense of feeding the cow enough to support her body, and doing chores for her, and giving her a place in the barn, it is anything but wise to fail to give her as much feed as she can use for producing milk."

THE VALUE OF SILAGE

The specialists of the Kansas agricultural college have said that "the farmer who uses dry feed where it would be possible to use silage is letting dollars slip through his fingers."

There is not anything new in the idea, but there is a lot of importance to be attached to it. Farmers do not build silos because of the cash outlay which a good silo demands, yet they will lose dollars every year by feeding dry feed when good corn silage would cheapen the feed, make better animal growth, lay on more fat or produce more milk.

Some one has said that the average farmer loses more money through careless management than he makes with his labor and from his investment. This may be a guess, yet it is true that the cost of a silo is lost each year or two on many farms because of the tenacious belief in the value of dry fodder and the lack of faith in the feeding value of corn silage. The farmer who is attempting to feed live stock for profit can well afford to make comparisons between farms where there are silos and farms where there are no silos; between cattle fed silage and cattle fed dry feed; between the size of the milk checks from farms that use the silo and the milk checks from the farms that adhere to dry feeds; between communities where silos are the rule and communities that have not yet awakened to the value of silos; between men that use silos and men that do not use silos. There are vast differences, as a comparative study will indicate. Such an investigation would produce the evidence that would be convincing to even the most skeptical.—Kimball's Dairy Farmer.

MACHINERY FOR JAPAN

Japan is at present placing large orders for machinery, especially that pertaining to all branches of electricity and spinning, with a large number of steam boilers. This unusual volume of importation is partially due to commercial development in Japan, but largely to suspension of shipping during the war. The most unusual of these importations is the increase of spinning machinery, and it is evident that the spinning industry in Japan is very profitable.

Mossdale Farm

JERSEY CATTLE **DUROC-JERSEY SWINE**

We believe that the test of a sire lies in his ability to sire uniform, prize winning offspring, and we are proud of the record of Mossdale sires.

Jerseys---

Our herd bull, JOLLY SENATOR RALEIGH, was never defeated in class as a yearling or as a two-year-old and this year he was grand champion, as a three-year-old, at the California State Fair, the Kings County Fair and the Fresno Fair. And at each of those shows his get won the get of sire class.

Duroc-Jerseys---

The record of Mossdale Durocs at recent fairs is proof of their merit. Freddy You'll Do, our herd boar, sired the winning get of sire group at the above fairs.

We can furnish young things of either breed at prices that are attractive. Write us your wants.

FARM LANDS FOR SALE

For Sale—or Part Exchange—140 acre. best combination ranch property in California. $24,000, half cash, balance at 6½ per cent. Or will sell on contract, $7000 cash down, balance at 8 per cent. Would take in residence or country property, well located, improved, any good section of California, to five to ten thousand. This is the surest chance to make big money for any investment in California; firstly, the property is offered 40 per cent. below anything of equal value; the property can easily be made salable at $500 an acre within three years and will finance itself in so doing; it is no desert proposition or out in the wilds; location approximately 100 miles from L. A., 12 miles from ocean air line; no better all-the-year climate anywhere; practically on state highway; two miles to P. O., depot, Association packing house and cannery, grade and high schools (bus picks up school children). 75 to 80 acres of this land is proven highest grade citrus land; frostless—lemons adjoining; equally good for other trees; no hardpan and no blasting for trees; grow any kind of crop right through winter months—vegetables, early potatoes, etc. Good nut land; 25 to 30 acres available for alfalfa, largest portion of which will not require any irrigation, balance with water lift not to exceed 20 feet—alfalfa adjoining. Large natural hog pasture with perpetual feed, water and shade. Perfect conditions for poultry, turkeys, geese, ducks. Any farm crop which will grow in California will do well on this place, it is so diversified; large and close markets. More water than you can ever use two sides of property—and no deep wells. Land now practically all under cultivation. There is on the place at this time a large quantity of feed for hogs, poultry, sheep, stock, worth at least fifteen hundred dollars if utilized right here—which goes in free. Also good heavy work horse and farm tools. Few acres of nuts growing. New buildings; house, grounds nicely improved with ornamental trees and shrubbery. This property is offered on account of ill health of owner and priced on basis of a quick sale and doing business direct—no commission—and a rare opportunity for a man who can raise $7000 to $12,000 cash. C. E. HOWLAND, Fallbrook, California.

AGED OWNER SELLS 345 A.
4 HORSES, 23 COWS AND
9 heifers, bull, calves, poultry, wagons, engine, binder, drills, complete implements, milk cans, crops, included to quick buyer, all for $7000, easy terms. Convenient railroad and banking town. 150 acres strong soil tillage, 75-cow wire-fenced pasture, wood and timber should pay for farm, milk checks running $500 monthly. Good 10-room house, big basement, barn, corn, hog houses. Details page 23 Strout's Fall Catalog 100 pages equipped bargains; copy free. STROUT FARM AGENCY, 831 A. G. N. Y. Life Bldg., Kansas City, Missouri.

For Sale—One of the Best improved 60-acre ranches on State Highway in Tehama County, California; high class neighborhood. All under irrigation at one dollar per acre yearly; no better soil in the State; big income property, not less than $5000 per year. 35 acres alfalfa, 10 acres orchard, almond and Franquette walnuts, 11 years old; 2 acres fine table grapes; good buildings. Old age reason for selling. Act quick if you want a fine home at a bargain. For particulars and terms write. Box 324, Proberta, California.

For Sale—676 Acres of the best land in Eastern Wisconsin, in the heart of the best dairy country in the United States. Land will produce fine crops of corn, wheat, oats, barley, potatoes, sugar beets, etc., and is suitable for general farming, cattle, hogs, or sheep. One mile to station and town, 45 miles to beet sugar factory, 15 miles to city of 30,000. Artesian well on place. John Grosse, Little Suamico, Wisconsin.

Snohomish County, Washington — 6000 acres of the finest dairy, berry or general high grade farm lands in the northwest; rapidly improving section; no drouths, bumper crops; tracts, 1 to 80 acres; ten yearly payments. This is your opportunity. Send for literature. Brownell Land Co., Birmingham, Washington.

120-Acre Fruit and Dairy Farm for lease, $750 per year, or sale $125 per acre; under Settlers' Water Ditch. 30 acres alfalfa, good sweet potato soil, in Kings County 5½ miles from Hanford. Apply F. E. Kilpatrick, Attorney-at-Law, Hanford, California.

For Sale, Ten Years Time—Twenty acre foothill citrus grove in bearing on state highway. Woodlake, Tulare County. Modern bungalow, full equipment, $16,000. Might take some trade. F. L. Kern, owner, 223 N. Coronado Street, Los Angeles.

SUNFLOWERS

My tall sunflowers love the sun,
Love the burning August noons
When the locust tunes his viol,
And the cricket croons.

When the purple night draws on,
With its planets hung on high,
And the attared winds of slumber
Wander down the sky.

Still my sunflowers love the sun,
Keep their watch and ward, and wait
Till the rosy keys of morning
Open the eastern gate.

Then when they have deeply quaffed
From the brimming cups of dew,
You can hear their golden laughter
All the garden through.

—Clinton Scollard.

THE DEBT

IT HAD been a wonderful season for nuts. The trees had so outdone themselves that it was clear no nut-eating creature need go hungry that winter. Nevertheless, just for sheer fun, boys and squirrels continued to hunt until there was scarcely a nut left on tree or ground.

Even then Chester Brown was not content. He went out one last time with his big sack, determined to fill it somehow and add it to his store in the feed room.

After he had searched in vain for a long time, he scrambled up to a rocky ledge not far from a big hickory-nut tree. To his great surprise he stumbled upon a hollow that extended back under the ledge as big as a small-sized cave. It was half full of dry leaves.

"Ha, here's a find!" said Chester to himself.

He scooped up the leaves in great handfuls and threw them away. At the last handful he chuckled aloud; the bottom of the hollow was lined with big ripe nuts!

Chester knew it was Johnny Squirrel's whole winter supply that he had found, but the sun was nearly down and he was very hungry; so he set to work at once to transfer the stock from the hollow to his sack. There were just enough to fill the sack.

As he rose to his feet he heard a shrill chattering not far away. Looking up, he saw Johnny Squirrel perched on a branch of the hickory-nut tree, protesting shrilly. Chester hesitated. How would it feel to have a huge creature come and take his stock of nuts, he wondered. That would be hard to stand, he knew; in fact, he doubted whether he would stand it. But the next minute he had flung the sack over his shoulder and was off.

That night he dreamed that Johnny Squirrel was chattering at his window. It was only a shutter scraping, but it waked Chester wide, and he lay for some time thinking about the matter of the nuts. The next morning he did not have the heart, somehow, to pour the nuts on the feed room floor with the rest of his supply. And all day he thought about the angry little squirrel face that had peered down at him from the limb of the tree.

The second night it snowed silently for hours, and by morning there was a deep snow on the ground. At breakfast Chester looked up from his oat-meal and cream.

"Father, will this snow hurt things?" he asked.

"Oh, no," was the reply. "It's good for the wheat, and—"

"I mean animals."

"The animals will stay in the barn."

"But wild things, like—birds," stammered Chester, looking hard at his spoon.

"The birds have all gone south by now."

"But the—squirrels." At last the right word was out.

His father laughed. "Bless you, boy, we don't have to worry about squirrels! If the squirrels didn't have foresight enough to lay in a good supply of this year's huge nut crop, they have no one but themselves to blame."

Chester shoved away his oatmeal. "I have something important to do," he murmured, as he left the table.

Ploughing his way through the snow to the barn, Chester loaded himself with an armful of straw, a shovel, and the sack of nuts, and then set off for the hickory woods. When he reached the rocky ledge he knew, by the tiny tracks in the snow, that a visitor had been there before him. Evidently Johnny Squirrel, hoping against hope, had come back again and again to see if a single nut had been left.

Two Helps in the Nursery

Chester's heart smote him. "He must be nearly starved," was his thought.

The mouth of the little cave was choked with snow, but when Chester had shoveled it away he found the hollow dry as a bone. He poured the nuts quickly into the hole and covered them deep with the straw he had brought.

"Whoop!" he said, as he straightened up. "I'm glad that's done!"

Just as he turned to go he heard a slight stir behind him. Whirling round, he saw Johnny Squirrel perched on a limb, watching him. This time the little squirrel was silent, but his black eyes were keen with interest, and he looked as if he could hardly wait for a chance to rush down and see what had happened.

"They're all back, old fellow!" Chester called. "Every single one of them! If you don't believe me, come and count 'em yourself."

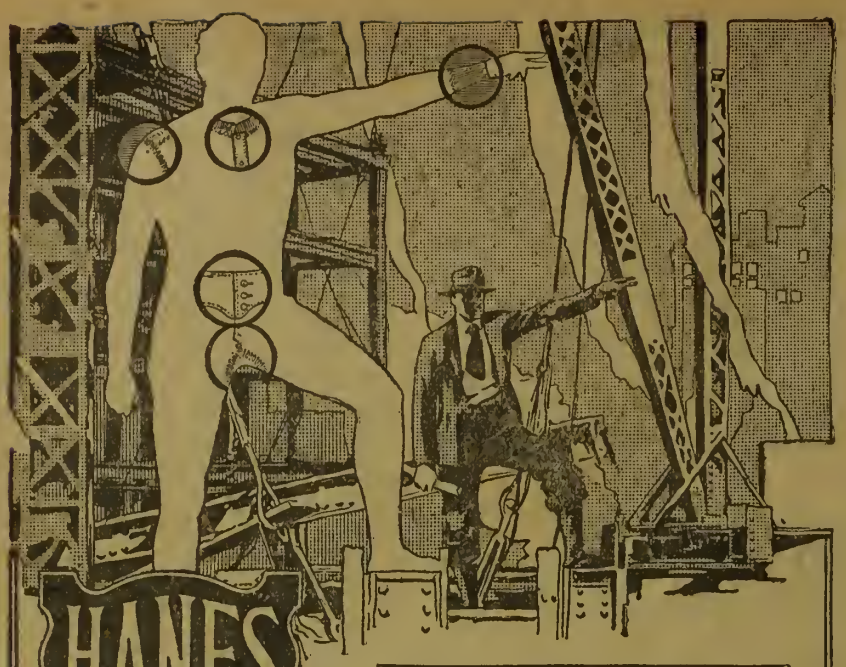
As he hurried back through the deep snow he heard Johnny Squirrel chattering loudly; but this time his chatter had a friendly sound.—Youth's Companion.

NOW WHAT CAN WE DO ABOUT IT?

Here is a letter from a Julian reader:

"The Cultivator is a good paper for ex-school teachers. I know, because I'm one.

"During my one year of housekeeping this paper has been a friend in need. It has helped me cook, clean, paint, garden and care for chickens. I sent for the farmers' bulletin at your suggestion and find it very useful in my canning. Now isn't the Cultivator going to help me raise my baby? Why couldn't you have a baby department? Aren't they valuable farm products? We think so."



HANES Trade Mark

Guarantee—*We guarantee Hanes Underwear absolutely—every thread, stitch and button. We guarantee to return your money or give you a new garment if any seam breaks.*

ELASTIC KNIT UNDERWEAR

Warning to the Trade—Any garment offered as "Hanes" is a substitute unless it bears the "Hanes" label.

Quality and care put into Hanes Underwear will astound any man!

You'd rate Hanes winter Men's Union Suits and Shirts and Drawers *sensational value* if you followed the bales of fine, long-staple cotton from the moment they entered the Hanes Plant until you saw Hanes Underwear packed into boxes for shipment all over the nation!

What goes into Hanes in quality and workmanship comes out to you in extra-wear, extra-comfort, extra-warmth!

Read every detail and compare with the circles in the diagram figure above, because you should understand that Hanes hands you: *Guaranteed* unbreakable seams, with reinforcements at every strain point; buttonholes last as long as the garment; elastic knit collarette that won't gap; shape-holding elastic knit shoulders; snug-fitting three-button sateen waist-band; elastic knit wrists; pearl buttons sewed on to stay!

Hanes Union Suits are the best at the price. They have the desirable features of Hanes Shirts and Drawers *with a closed crotch that stays closed!*

If your dealer cannot supply you with Hanes write us immediately.

Union Suits for Boys are as wonderful value as are our men's garments. To mothers and fathers Hanes boys' Union Suits are superb. Cozy, fleecy warmth and the finest workmanship put these boys' suits in a class distinct from all others. *They certainly do stand the wear and wash!*

Now the aim of the household department has always been to serve as an exchange for helpful ideas and to find answers to puzzling questions. Can we meet the need of our Julian home maker? This is squarely up to the mothers who read this department, for the household editor, herself an ex-teacher, knows something of cooking and making over and general household managing but, unfortunately, nothing of babies. But she feels that, as in the past, Cultivator readers who do know will help.

If our Julian reader will tell us her problems we will present them to our readers for answer by those who know through experience. Meanwhile let's have some helpful suggestions without waiting for the questions to be asked.

Short letters of not more than 200 words are what the Cultivator wants in this case. There is no limit to the range of information wanted. Feeding, clothing, sleeping, bathing, baby book of grandmothers's way, training baby or being trained, orange juice, lime water, visitors, and anything else that concerns mother or baby will be to the point.

For such suggestions received in this office before Saturday, November 15, the Cultivator will give extension of subscription. With your letter please send name and address of one to whom you wish subscription credited. Please write on one side of paper. Address Household Department, California Cultivator, Los Angeles, California.

As a starter we give here a very practical suggestion sent to this office by a reader of the Rural Californian, at that time also published by the Cultivator Publishing Company.

* * *

Two Helps in the Nursery

(Photograph on preceding page and description furnished by Mrs. Geo. H. Pettengill, Los Angeles.)

I have two pieces of nursery furniture which have been the means of conserving half of my physical energy, and if you are the mother of a babe or small child I am sure you will agree with me.

Instead of the customary befrilled and dust collecting basket to contain the baby's toilet articles I designed the little toilet table shown in the illustration. It is on ball bearing castors and may be rolled about at a touch. The drawers are cretonne lined and contain all the articles used in giving the bath, one containing also a stationary pin cushion. The table is 14 by 25 inches and 27 inches high. The drawers are six inches square.

The other article, my "changing table," is set close to the wall to keep baby from rolling off one side, while a five inch board does similar duty on the other side. If you are in the habit of stooping over a bed many times a day your back will appreciate this convenience. It is 18 by 36 inches and 36 inches high, for my height, five feet eight inches. Make yours to fit your back. I have a cretonne pad on top of the table and a pin cushion tacked across the right hand end.

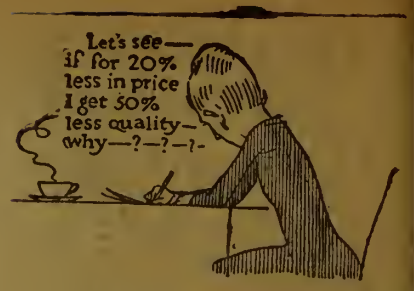
A trap door eight by 12 inches, hinged four inches from the right hand end, serves the double purpose of "nursery chair" for the very young infant and is a great help when a colon flush must be given hurriedly, the diaper shelf, of course, being used for the receptacle.

HOUSEHOLD QUERIES

Canning Pimentos

Can you tell me how to can pimentos? We have a fine lot this year and are very fond of them. Would like to put up a good quantity. Several of my neighbors also want to find recipe. We can find nothing in cook books—Subscriber, Los Angeles.

Here are recipes for canning and pickling: The pimentos are much richer and finer flavored if allowed to fully ripen before canning, but if caught by frost before ripening they are very good. To can whole peppers cut slice off stem end so seeds and stringy portion may be removed, then pour boiling water over. Let stand five minutes, then pack in small jars, pint or half pint. Fill with boiling



"Cheap" tea isn't cheap, not really; it makes fewer cups per pound than good tea, and you don't even get what you pay for—the rich full-flavor of fine tea. You do get tannin, which is bad for the health.

Your really cheap tea is Schilling Tea. It costs only ⅓ cent per cup, and you get what you pay for—the true tea-taste.

There are four flavors of Schilling Tea—Japan, Ceylon - India, Oolong, English Breakfast. All one quality. In parchmyn-lined moisture-proof packages. At grocers everywhere.

A Schilling & Co San Francisco

"Ask Barker Bros."

This is a safe way to settle any question about the furnishing or refurnishing of all or part of your Home.

This is an organization of 1,300 Home making enthusiasts. A helpful, appreciative understanding of the many problems met in making a better Home exists throughout Barker Bros'. store.

Making better, more beautiful, more comfortable Homes is one part of our business. Helping to take the Drudgery out of housework is the other part.

Our mail brings us daily throughout the year questions from puzzled home makers everywhere in the West—questions as to the solution of some important problem of Home furnishing or Home efficiency.

Barker Bros. consider it a part of their duty to give careful, detailed answers and suggestions by mail to all such questions. It is your welcome privilege to write us for information on any particular Home subject in which you are interested. Or if you wish to receive our Magazines and Special Literature as issued from time to time, just say,

CATALOGUE NOTICE

Send 10 cents in silver or stamps for our Up-to-Date FALL AND WINTER 1919-1920 CATALOGUE, containing 550 designs of Ladies' Misses' and Children's Patterns, a CONCISE AND COMPREHENSIVE ARTICLE ON DRESSMAKING, ALSO SOME POINTS FOR THE NEEDLE (illustrating 30 of the various, simple stitches) all valuable hints to the home dressmaker.

water and place in boiler. Boil for one hour for three successive days or give five hours continuous boiling on one day. The pimentos mold quickly after opening jar and they are so rich that a large quantity is not wanted at one time, so it is better to can them in small containers.

Some prefer the pickled to the simple canned pimentos. Prepare for cooking as directed above. Cover with boiling water for three minutes, drain and plunge in cold water. Again drain and pack solidly in small jars. Boil 15 minutes the pickle to pour over peppers, made in the proportion of one quart vinegar to two cups sugar. Pour this boiling hot over the peppers packed in jars and let overflow the jars to be sure no air space is left. Put on covers and store in cool dry place.

Queen Olives

Will you kindly publish recipe for pickling Queen olives for home use? —Subscriber, Lindsay.

Olives practically identical in character and quality with the imported Queen olives can be made by fermentation subsequent to pickling. The olives are picked after they have reached good size but before they show any sign of coloring, either red or yellow. They are placed in a two per cent lye (two and one-half ounces of lye per gallon of water) and left until the lye reaches the pit. The lye is then replaced by water changed twice daily until all taste of lye has disappeared. They are then placed in seven per cent brine (nine ounces of salt per gallon of water). All these operations should be carried out with as little exposure to the air as possible. The olives are kept in the brine in closed receptacles at ordinary room temperatures until fermentation has developed the characteristic flavor and acidity. This will require from three weeks to several months, according to the temperature and the amount of flavor desired. When the fermentation has reached the desired point, the brine is taken off, strained or filtered and boiled. The olives are rinsed quickly with water and then covered with the hot brine. They may be kept in barrels or preserving jars without further treatment. If intended for shipment or to be kept for a long time, they may be placed in glass preserving jars or lacquered cans. These are then filled with the boiling brine, sealed and heated to 212 degrees Fahrenheit for about 20 minutes.

NEW USES FOR BREAD CRUMBS

Passed on to Cultivator Readers

Fried With Bacon

Dry bread cut in squares and fried with bacon takes up the fat, tastes delicious when hot and fresh and makes the bacon go farther.

Dumplings in Soup

Bind dry bread crumbs with beaten egg. Shape like noodles or drop from spoon into the boiling soup.

In Salad

Mix a few fine white bread crumbs through salad to absorb some of the juices which otherwise might separate from the dressing and look watery.

Over Pie Crust

Before filling pie crust brush over with egg and fine crumbs. The crumbs will take up the moisture that sometimes makes the under crust soggy. The egg will also glaze the surface and help in the same way.

TO FRESHEN VELVET

The pile, or nap, can be raised by careful steaming. Lay wet cloth over back of velvet; lift the two together and pass over an inverted hot iron, holding the wet cloth next the iron; or hold the velvet stretched over the steam from a vessel of hot water or a steam spreader on the spout of a teakettle, with the back of the velvet toward the steam.

Dust may be removed by brushing, then sponging carefully and steaming.

ONE CONSOLATION

Youths sowing their wild oats nowadays can't mix in so much rye. —Boston Transcript.

"Ring the dinner bell"—and

Bake the biscuits big, brown and quick

in the air-tight oven of your Majestic Range. The Majestic bakes everything—meats, breads, cakes, pies, puddings—wonderfully fine, because the Majestic construction makes it so easy for you to control the exact heat desired. All joints are riveted air-tight, and the flue lining is pure asbestos. No part of the Majestic Range can get rickety or loose. No heat can escape. With economy of fuel, you can have a slow, medium or hot oven, as wanted—and bake to your heart's delight.

Doors and Splasher Back Paneled in White Enamel
or in Blue Enamel, if desired.

This lustrous enamel finish is the final touch to Majestic Range *beauty*. The smooth nickel trimmings; the natural finish charcoal iron, rust-resisting body; the blue burnished cooking top—are all so easy to keep newly bright, attractively clean.

There are more than a score of distinct *supreme* advantages in the Majestic Range. You must see and examine the Majestic at your dealer's to appreciate them all—and to realize that the Majestic is the *greatest* range value.

A Majestic dealer in nearly every county in 42 states. See the Beautiful Majestic shown by the Majestic dealer in your locality. Many styles and sizes. Prices the same everywhere, freight considered.

FINER THAN EXPECTATIONS

The New

GRANT SIX

Those who read the announcement of the new Grant Six expected a great deal of the new car.

They said, that if it was as good as the description suggested it *must* be an unusually fine car.

Now the Grant Six has been seen and examined by thousands.

And the general opinion everywhere expressed is that it exceeds everything claimed for it.

They tell us it is even larger, handsomer and more powerful than they expected.

They say the finish, the trim, the upholstery are simply beyond comparison with anything offered for similar price

They are particularly enthusiastic about the beautiful body design and the wonderfully sturdy chassis.

And always they comment on the infinite care and thoroughness expended in details ordinarily slighted.

Because we are building a car of character—a car of the utmost refinement, a car that reveals its quality instantly by its performance and construction it is only fair to say we greatly appreciate the splendid reception given this new model.

The demand for it is so great that we suggest that you place your order as far as possible in advance of your requirements.

Five Passenger Touring Car . . .	**$1495**
Roadster	**$1495**
Four Passenger Coupe	**$2450**
Five Passenger Sedan	**$2450**

GRANT MOTOR CAR CORPORATION

CLEVELAND, OHIO

Third Sale of Shorthorns

Under auspices of California Shorthorn Breeders' Association will be held on

Thursday, November 6th, 1919

at 1:30 P. M Sharp

at California Building, Exposition Grounds, SAN FRANCISCO

In conjunction with the San Francisco Livestock Show, Nov. 1st to 8th, 1919

30 Head of Cows and Heifers 10 Head of Bulls

The entries to this sale have been selected both from the standpoint of individuality and breeding, and represent unquestionably the greatest lot of Shorthorns ever offered at public sale in California.

The offering comes from the herds of the following well known breeders:

ORMONDALE COMPANY, Redwood City, Calif.

CALEDONIA FARMS, West Sacramento, Calif. (Edward Cebrian)

ESTATE OF T. B. DIBBLEE, Santa Barbara, Calif. (San Julian Ranch)

PACHECO CATTLE COMPANY, Hollister, Calif.

T. T. MILLER, Hollister, Calif.

For catalogue address **California Shorthorn Breeders Association**

222 Sharon Building, San Francisco Auctioneer: EARL GARTIN, Greensburg, Ind.

Barley, feed, 2.95@3.00; brewing, 3.15@3.20.

Wheat: Following are net weight prices for bulk grain, based on federal standards and grades at San Francisco Bay and Los Angeles Terminals:

	Per Bushel	Per Cental
Hard Wheat—		
No. 1	2.20	3.66 2-3
No. 2	2.17	3.61 2-3
No. 3	2.13	3.55
Soft White—		
No. 1	2.18	3.63 1-3
No. 2	2.15	3.58 1-3
No. 3	2.11	3.51 1-3
Club and Sonora—		
No. 1	2.16	3.60
No. 2	2.13	3.55
No. 3	2.09	3.48 1-3

For sacked grain add nine cents per bushel of 60 pounds to above price. Deduction of three-fourths of a pound is made for weight of standard grain bags. Wheat grading under No. 3 and mixed or smutty wheat will be purchased according to merit.

Mill Feed (per ton): Bran, 43.00@44.00; mill run, 42.00@43.00; Rolled Barley, 52.00@54.00. Linseed oil cake meal, nominal; cocoanut cake or meal, 41.00@42.00 per ton.

HAY

Under date of October 25, Scott-Magner & Miller says:

Receipts past week 1338 tons. The fields are practically cleared and all hay from now on will probably come out of the warehouses with the exception of small lots here and there, with the later cuttings of alfalfa from the fields. Fancy wheat or red oat hay is in demand. Trade throughout this city is light, most big feeders having laid in their winter supplies. Export trade is practically nominal, owing to the waterfront troubles and stevedores' strike it being most difficult to make deliveries to any of the docks. The alfalfa market remains about the same with light inquiry. Straw is in large supply and light demand.

We quote today wholesale prices in carload lots as appear from dealers transfers upon the hay market—for prices to consumers charges of cartage, commission and handling expenses must be added according to conditions:

Fancy Wheat hay (light 5-wire bales)	20.00@22.00
No. 1 Wheat or Wheat and Oat hay	17.00@21.00
No. 2 Wheat or Wheat and Oat hay	16.00@18.00
Choice Tame Oat hay	19.00@22.00
Other Tame Oat hay	16.00@19.00
Wild Oat hay	15.00@18.00
Barley hay	15.00@19.00
Alfalfa hay	17.00@22.00
Stock hay	12.00@15.00
No. 1 Barley straw, bale	50@80

Citrus Markets

Los Angeles, Oct., 29, 1919.

Car shortage is holding back shipments of Valencias, though the number of cars stored or on Eastern sidings is rather greater than normal. November, the last month of the citrus year, will not see all Valencias forwarded. Porto Rico and Florida new crop is now supplying some of Atlantic coast markets. Porto Ricos are selling from $1.25 to $3.90. Floridas are selling around $4.00 to $4.25 f. o. b. shipping point.

Foreign lemons are more of a feature in the Eastern market and are depressing prices slightly. Californias are selling in Middle West around $5.50 and $6.50.

Shipments

Shipments of oranges from Southern California to date since November 1, 1918: 35,024 cars, lemons 9,655, total 44,679. To same date last season: oranges 14,325, lemons 6,088, total 20,413. Central California this season: Oranges 4,427, lemons 354, total 4,781. To same date last season: Oranges, 2,539, lemons 115, total 2,654. Northern California: Oranges 244, lemons 2, total 246. Last year same date: Oranges 203.

The New 16 Valve

TWIN CITY

12-20 Kerosene Tractor with 16-valve engine

Pays Big Dividends

For the first time in the history of the tractor industry, the 4 cylinder, 16 valve engine (valve in head type) is now applied to a tractor. The TWIN CITY 12-20 with its 16 valve motor actually develops 25 per cent more than its rated horsepower.

This new 12-20 is a light weight tractor that will out-pull, out-last and out-dividend other tractors of equal rating.

Not built down to a price, but built up to a fixed ideal—to do the work assigned to it better than it has ever been done before.

The highest grade tractor will unfailingly prove the least expensive and pay the biggest dividends.

Closing Out Sale of Percherons

The Sam Wade & Son Stud

La Grande, Oregon, November 25

47 Stallions and Mares

Owing to advanced age of the senior member of the firm of Sam Wade & Son, Lostine, Oregon, it becomes necessary to close out their entire stud of registered Percherons.

The offering consists of 47 head, including 8 stallions ranging in age from yearlings to five year olds, four weanling stud colts and 35 mares, and fillies. Among the cataloged lots are a number of sons and daughters of the great Calypso.

This stud has been the largest winner at the leading Northwest shows for many years. The stallions are the ton kind, and the mature mares will weigh from 1800 to 2000 pounds. Wade Percherons have a reputation for size, bone, quality and soundness. For catalog address

Semi-Solid Buttermilk

Makes 'Em Grow Fast

Feed your hogs and poultry semi-solid buttermilk. It keeps them healthy and gets them to market earlier.

Semi-solid buttermilk is pure creamery buttermilk, with nothing added—only the water is taken away. It is not modified by the addition of sulphuric acid or any other preservative. Its own **NATURAL LACTIC ACID** keeps it fresh.

We Guarantee Every Barrel of Semi-Solid Buttermilk.

We guarantee that semi-solid buttermilk is pure and unadulterated, sterilized and pasteurized. It is a SAFE feed, and you will be satisfied with the results from feeding it.

Saves Grain, Saves Time, Saves Money

Saves GRAIN, because it balances the grain ration. Saves TIME because hogs and poultry fatten quicker when fed semi-solid. Saves MONEY because you don't pay freight on the water content of the buttermilk, and you don't have to feed so much high-priced corn.

Semi-Solid Buttermilk Is Essential

for BABY CHICKS; raises every one; keeps them healthy and vigorous. No sickly or dead chicks.

TRY IT.

FOR LAYING HENS—The egg production increases at an astonishing rate. Keep accurate account, and TRY IT.

POULTRY FOR MARKETS—Milk-fed chickens reach market first, with choice, firm, white flesh. TRY IT.

We know what SEMI-SOLID BUTTERMILK will do. Don't be skeptical, but try it, to be convinced.

Twenty carloads were sold in Petaluma district during 1918. Semi-solid buttermilk is put up in 500-lb. barrels, half barrels, quarter barrels and 10-gal. kegs. Have buttermilk when you want it. Semi-solid keeps in any climate, any length of time.

Order from your dealer. If he can not supply you, send your order to Dill-Crosett, Inc., 235 Pine St., San Francisco, and we will supply you direct from our factory at Benicia, California. You pay on receipt of the goods.

Poultry at the Livestock Show

By Jean A. Koethen

POULTRY shows are interesting, first because they indicate who's who in the poultry world, that is, what breeders have worth while stock to offer, and second because they indicate what's what, that is, what breeds are "holding their own," as the doctors say, and which are lagging. I doubt if it is altogether a matter of fashion that some breeds come to the front and others drop back. These years of war feeding have tried poultry breeds, as they have the rest of us,

Who's a Slacker?
"Ammidon," First Cornish Cock, owned by Mrs. Hanson Puthoff, Eagle Rock.

with fire, and those that are preeminent now are so because they have proved their worth.

Visitors to the show found "Red" alley the longest. There were fine birds, too, not a few. Most of the birds were single comb, but the few rose comb birds were favorites, both with the visitors and with the judges. The best bird in the show, if I am not mistaken, was a rose comb Red pullet, a bird of wonderful color.

Wyandottes to the Front

But Reds will have to hurry some to keep ahead of White Wyandottes, another splendid dual purpose breed. They have long been very popular in the East, but it is only in the last two years that they have begun to take a large place in Southern California show rooms. Ninety-eight Wyandottes, nearly all of them white, as against 129 Rhode Island Reds was certainly a fine showing and a great jump in advance of previous years. They were splendid birds, too, wonderful, fluffy creatures. One has only to see them to love them, and it is no wonder every show adds to their popularity. First cockerel was a magnificent bird and first hen a beauty.

Andalusians Coming Strong

It was something of a surprise to find Andalusians third in number, with 80 birds in "Blue" alley. First hen and first pullet were very daintily marked. Andalusians have a reputation for being hard to breed true to color, but they are also building up a reputation as consistent layers.

Fine White Leghorns

White Leghorns were an unusually strong class, 74 birds being shown. The coop of the first cock was lined with ribbons, and no wonder. His delicately yellowed earlobes, brilliant shanks and royally curved tail marked him a bird such as can be produced by only the most careful breeding. First hen was also a beautiful bird.

So many commercial poultrymen never show their birds that the number of White Leghorns in a show is little indication of the estimation in which this breed is held. In some shows they have been a very small class, but their popularity as egg producers has never wavered. The little White Leghorn hen always delivers the goods.

Anconas and Rocks came next with about 50 birds in each class, and Dark Cornish and Buff Orpington followed with 38 birds each. Special mention should be made of first Barred Rock cock and first Dark Cornish cock, which were both birds of re-

Winner of the Blue
First Barred Rock Cockerel, owned by Gill & Warrick, Glendale.

NOVEMBER, SELECTING THE BREEDERS

The hens selected as mothers for next season's chicks should have been consistent layers for at least a year, not phenomenal layers, for they are often poor breeders, but steady layers of large, well-shaped eggs. They should be vigorous and of good shape and color. Select for vigor first, for production second, for color and shape third.

Do not make the mistake of selecting too many hens. Only the very best should be used.

The male is more than half the pen. Both external appearance and fecundity are to a large extent transmitted through him. Let him be the best that can be obtained, large, vigorous, as near standard as possible in color and shape, and from a high producing strain. He should be rather blocky in build, with short neck, legs set wide apart, long back.

Mate cockerels to old hens and cocks to pullets, but avoid the use of pullets if possible. Two year old hens are the best.

markable color and shape. Anconas are always a good class and they were never better than last week.

There were 25 Light Brahmas and the usual number of scattering exhibits. Black Minorcas were formerly a large class, but there were only 13 in this show. Brown Leghorns have never been popular here, though reputed excellent layers, but there are always a few in every show. There were four Golden Gates, a new breed that several breeders have taken up, three Java Jungle Fowl, remarkable only as curiosities, a sprinkling of Sussex, Silver Spangled Hamburgs, Black Langshan, Black Cochin and Rhode Island Whites, and a coop containing five Cornish Red Hereford capons.

The $20 cash prize for best display in the show was won by J. R. Huddleston with his Andalusians. Second was won by the Hocking Poultry Farm with Anconas, and third by E. E. Emerson with his Single Comb White Leghorns.

Many Bantams

Bantam row was unusually long and attracted a great deal of atention. There were B. B. Red Games, R. C. Black Games, Golden Seabright, Silver Seabright, Buff Cochin, Black Cochin, White Cochin, Black Minorca and Partridge Rock. The two last named show what can be done in breeding bantams from modern fowl and were very lively pretty little birds.

Turkeys and geese held the place of honor in the center of the big tent and were both large classes. There were 25 bronze turkeys, some of them birds of extraordinary size and color, and seven White Holland, while the 19 immense Toulouse geese made an astonishing array. Four varieties of ducks were represented, White and colored Muscovy, White Pekin and Penciled Indian Runner.

Much praise of the show was heard from all visitors, both of the unusual variety of exhibits and of their excellent quality.

POULTRY QUERIES

Indian Runners

I would like to know how old "Indian Runner" ducks ought to be before they start to lay; also what is the best feed to make them lay?—Subscriber, Alpaugh.

Runner ducks begin laying at about the same age as Leghorn pullets, sometimes a little earlier. I have heard of their beginning at four months, but they do not always mature so early. Something depends on feeding and breeding, as with pullets.

Day Old Chicks

At this place we have it quite cold in the last of December and January but have good weather with cold nights for the next four months. We want to get some day old White Leghorn chicks as soon as possible and wonder if you would advise us to get them now or in February. In the spring we have a great deal of wind so that they may have that to bother them. Are the chicks raised now as vigorous as they will be later, and are they as vigorous from the south as from Petaluma or some other place north?—Subscriber, Runnington.

Vigor is not a question of climate, nor to any extent of time of hatching. There is a prevalent impression, I believe, that chicks hatched in January and February are a little more vigorous than chicks hatched at other times, but there are other reasons for this. Certainly chicks hatched in cool weather make better growth than summer chicks. The main reason for hatching in January or February is that pullets mature in just the right time for fall laying. Fall pullets usually mature in March or April, lay through the summer and are ready to molt in the fall. Winter pullets, to be sure, may molt the following fall, but this can be prevented by holding them back from too early laying. If I were you I would order them for the last week in January or the first week in February. You can protect them from the wind. I do not see why southern chicks should not be as vigorous as northern. Vigor depends on the breeder, not on the climate.

Veterinary

Answers in this column by Dr. Wm. Petrie, 2714 South Harvard Boulevard, Los Angeles, are without charge. For immediate mail answer remit $1.00. In writing questions give full symptoms or particulars of injury of animal. Unsigned communications receive no attention.

Skin Disease

I have two mares that have small round lumps beneath the skin on the neck, mostly where the collar is worn, although a few lumps have appeared on other parts of the body. They do not seem to bother them very much but some grow quite large and cause soreness. They have been affected since I bought them last June. The lumps are hard and about the size of a marble. Please advise me what to do for them.—Subscriber, Oregon.

Such pimples usually accompany a slow or sluggish condition of the whole system with constipation, dry skin, dandruff and rough dry hair. The circulation is poor and the glands, especially those of the skin, are not active. There is no use treating the pimples except where the harness irritates them and those should be bathed in cold water when removing the harness. Get ground flaxseed that has the oil left in, not the oil cake meal, and give a handful in the feed once a day. If you feed rolled barley it would make it easier digested and more laxative if you would pour boiling water on it half an hour before feeding. Also give bran mashes once or twice a week. Bran mash you know must be made with boiling water. Put the bran in a clean bucket, pour on plenty of boiling water, stir it until all is wet and cover it up until cold, then salt it and add a handful of the ground flaxseed. The following is a good remedy to help clean up the skin. Get your druggist to prepare it. Take one and one-half drams of arsenic powder, three ounces of powdered nux vomica and six ounces of ground gentian. Mix and divide into 32 powders. Give each horse one powder once a day in the feed.

Sow With Rheumatism

I have a favorite sow with her third litter of pigs, which shows some lameness. She was a little lame with her first litter but we changed the pen and saw no more of it until now. She has good healthful quarters and runs on alfalfa pasture. Sometimes the lameness is in a front leg and again in a hind one. Is it rheumatism and what should we do for it?—Subscriber, Chula Vista.

It may be rheumatism. Give her a very dry place to sleep and plenty of straw to keep warm in. Mix four ounces of bicarbonate of soda and one ounce of salicylate of soda and give her a teaspoon of the mixture in the feed once a day.

GOING TOO FAR

An American visiting London and goaded to desperation by the incessant necessity for tips, finally entered the lavatory of his hotel, only to be faced with a large notice which read: "Please tip the basin after using."

"No!" said the Yankee, turing on his heel, "I go dirty first!"

Try This STUMP PULLER 30 Days At My Risk FREE

Prove That One Man Alone Clears Land for Big Crops—Quicker! Cheaper! Easier!

Don't send a penny of money! All I ask is the privilege of sending the Kirstin for you to try 30 days—AT MY RISK! Test it on your big, little, green, rotten, low cut, tap rooted stumps—also trees, hedges or brush. See how quick, easy, cheap it does the work. How easily **One Man Alone** handles and operates it. In fact, give it EVERY test. Prove ALL my claims. If satisfied, keep puller. If not, return at my expense. No risk to you. **6 months to pay.**

Kirstin ONE MAN Stump Puller

The famous Kirstin is made of finest steel—guaranteed 3 years against breakage, flaw or no flaw. It weighs less—costs less. Yet has greater power, speed, strength. Lasts longer. Due to scientific leverage principle a few pounds on handle exerts tons on stump. No horses or extra help needed. No digging, chopping or other expense. Several speeds. High speed loosens stump. Low speed yanks it out quick. Patented quick take-up for slack cable. Easily moved around field. Single, double, triple power. Wonderful success!

SEND COUPON!

Just send the coupon for Big Valuable FREE Land Clearing Book. Tells how to make every acre produce BIG CROPS. How to Double and Treble land value. Describes Kirstin One-Man Clutch; One-Man Drum, and Horsepower Models. Outlines Special Agent's Proposition. Shipment from nearest Distributing Point saves you time and money. A. J. KIRSTIN, General Manager.

Put it up to your hens!

SAY what you will, the final test of a feed is: *does it make your hens lay?* If it does that—if it makes your hens produce eggs and more eggs—*and keeps them in fine condition all the while*—then, it's a good feed.

Regularity in feeding is important, of course. But, even more important, is *uniformity* in feeding. With hand-mixed feeds you can never be sure that one batch is like another. No matter how careful you are, no matter how sure you *think* you are, you can't run away from the fact that it's *guess-work* at the best.

That's why thousands of successful poultrymen have turned to Sperry Surelay. They have found in Surelay a simple and *economical* solution of their feeding problem. They know that Surelay is not only right but *always* right—always the same. Our daily laboratory tests (something the hand-mixer does not, and can not have) assure absolute uniformity at all times.

Surelay is worked out in accordance with a *practical*, scientific formula that has stood the test of time. It is so blended as to provide just the right amount of *protein* for the white of the egg—just the right amount of *fat* for the yolk. It contains *fourteen* distinct ingredients that every hen in your flock needs to make her a profit-producer.

Moreover, our large scale of production enables us to manufacture and *sell* the finished product lower than the average feeder can *buy* the ingredients—to say *nothing* of the cost and trouble of mixing.

After all, all we ask you to do is to put the egg-production question squarely up to your hens. Feed them Sperry Surelay—and judge its value by what the hens do for you. Let the substantial figures on your Egg Record prove to you the wisdom of using this *uniform*, dependable feed.

If you haven't a copy of our handbook, "Makes Hens Happy" you ought to have it. For, it contains some mighty practical hints about poultry-raising and some mighty good profit-pointers. A copy is yours for the asking—simply fill in the coupon and mail today!

Grain Elevator at Murrietta, Riverside County

Several grain elevators have been erected in Northern portions of the state, but the one shown above is the first large one to be erected in the South. It is near the southern boundary of Riverside County and in a great grain growing section. Its capacity is 33,000 bushels and has proven far more economical than the sack method of handling grain.

Three Great Conventions at Chico

THE 52nd State Fruit Growers and Farmers Convention, together with the conventions of the California nurserymen and horticultural commissioners, will occupy the entire week at Chico beginning next Monday.

On Monday morning the county horticultural commissioners will be called to order by President Fred Seuiberger of Alameda County. Fred C. Brosius of Sacramento County is secretary of the association. This association has no formal program as yet arranged but will discuss matters of interest to fruit growers, with particular reference to the police control side.

The horticultural commissioners have been given far greater power since the standardization law went into effect and these problems will have principal place in the discussion which will follow on Monday and Tuesday. On Tuesday afternoon the commissioners will make an auto trip to the United States plant introduction gardens four miles southeast of Chico. These gardens have been important factors in distributing new introductions to this country from other parts of the world. The gardens are in charge of Superintendent R. L. Beagles.

State Fruit Growers and Farmers

On Wednesday morning at 9:30 Director Hecke will call the larger state convention to order in the state normal school. There will be music, and welcome to the city by Mayor Reynolds and response by Director Hecke. Following this, addresses and discusslons will fill the week.

The Program

California Agriculture, James Mills; Accomplishments and Possibilities of Cooperation—California Almond Growers Exchange, George W. Pierce, president; California Peach Growers, Inc., F. H. Wilson, president.

Wednesday, 1:30 p. m.—Cooperation—California Associated Raisin Company, Wylie M. Giffen, president; California Pear Growers Association, Frank T. Swett, president; California Fruit Growers Exchange, G. Harold Powell, manager; discussion led by George C. Roeding, Fresno; Standard Pack and Packages, Charles E. Virden; Fruit Packing Demonstration, Dr. W. L. Howard and Prof. W. P. Tufts.

Wednesday, 7:30 p. m.—Status of the Rice Growers' Association, J. H. Stephens, president; Function of the Junior College in Its Relation to Agriculture, Dr. E. B. Copeland, Will C. Wood, Mrs. Elizabeth Hughes.

Thursday, 9:30 a. m. — Auto trip through Oroville orange and olive district, inspection of canneries and olive packing plants; luncheon in Exposition building. A reasonable charge per plate to cover expense of serving. A live program will be "served" with the luncheon.

Thursday, 1:30 p. m., in Exposition Auditorium — Packing Oranges and Maturity Standards, F. J. Mason; Packing Ripe Olives, E. W. Ehmann; Olive Culture with Special Reference to Pruning, Prof. F. T. Bioletti.

Friday, 9:30 a. m.—Irrigation, Pruning and Spraying as Factors in Frost Control, Dr. J. C. Whitten; Irrigation, Prof. F. J. Viehmeyer; Red Spider, E. R. de Ong; Evaporators for Fruit Drying, E. M. Sheehan, Prof. W. V. Cruess.

Friday, 1:30 p. m.—Standardization and the Consumer, A. S. Hoyt; Community Canneries, Ralph W. Crary.

Friday, 6:30 p. m.—Banquet.

Saturday, 9:00 a. m.—Auto trip to Durham; Live Problems in American Agricultural Development, Dr. Elwood Mead, Prof. H. E. Van Norman, Al Lindiey, Col. John P. Irish.

CALIFORNIA NURSERYMEN'S CONVENTION

The California Association of Nurserymen will hold one of its most important meetings in Chico November 13-15. The sessions begin next Thursday morning in Elks Hall on Second street.

The first session will be given to welcome to Chico by Dr. E. B. Copeland, president of the Chico chamber of commerce. George F. Otto, chairman of the executive committee, will respond for the association. The first in order of business will be reports of special and standing committees. The committee reports will be given by: Membership, R. M. Teague, San Dimas; Finance, John S. Armstrong, Ontario; Vacuum Fumigation, David B. Mackie, Los Angeles; Experiment Station Cooperation, Leonard Coates, Morganhill; Standard Fruit Tree Caliper, George C. Roeding, Fresno; Standardizing Fruit Varieties, J. E. Bergtholdt, Newcastle; Best Types of French Prunes, Leonard Coates, Morganhili; Legislation, George C. Roeding, Fresno; Insects and Disease, George H. Hecke, Sacramento; Transportation, J. D. Meriwether, Ontario; Deciduous Fruits, Max J. Crow, Gilroy; Citrus and Tropical Fruits, D. W. Coolidge, Pasadena; Viticuiture, Frank T. Swett, Martinez; Gardens, Fred H. Howard, Los Angeles; Plants and Flowers, E. James, Oakland; Native Vegetation, Theodore Payne, Los Angeles; Arboriculture, John J. Reeves, Beverly Hills; Nomenclature, Leonard Coates, Morganhili; Exhibitions, Adolph Ekstein, Modesto; Program, C. W. Gandy, Modesto.

Features on the program are:

Deciduous Fruit Bud Selection, Geo P. Weldon.

Our Greatest Nursery Problem, J. E Bergtholdt.

Costs, Prices, Salesmanship, Credit. W. R. Wood.

California Nurserymen of the Fifth Decade, Prof. E. J. Wickson.

The Kadota or White Endich Fig. W. Samuel Clark.

Some Plant Introductions, E. O Orpet, bureau of plant industry.

Ferns for Outdoor Fernerles, H Plath.

Future of Small Fruits in California. H. H. Hyde.

Others assigned place on program have not yet accepted.

Ladies' Auxiliary

This will also be the third annual gathering of the Ladies' Auxiliary, of which Mrs. John Vallance of Oakland has been president since its inception The other officers are: Mrs. Max J Crow, Gilroy, secretary, and Mrs Chas. E. Jackson of Cupertino, treasurer. On the evening of November 14 the club women of Chico will give the members a reception and dinner at the Presbyterian church, during the time when the men will be enjoying their annual banquet at the Hotel Oaks.

Why Own an Automobile?

By James De Camp

OUR prehistoric ancestors traveled on the hurricane deck of the mastodon, hammering the flank of the huge lumbering creature with a tusk appropriated from some hapless saber tooth tiger. Today we slip into the comfortably upholstered seat of a motor car, press the starting button, grasp the steering wheel and hit it up for the horizon.

The printing press, the steamboat, the locomotive and electricity were revoiutionary in their time, but nothing has so thoroughly interwoven itself with the threads of city and country life as the automobile. Although motoring was orlginally most popuiar on city boulevards, highway extension and development of better road conditions throughout the United States have gained momentum so rapidly that at the present time the farming class outdistances all others in the purchase of machines.

For the farmer or rancher there is no investment more fraught with satisfaction and results than the purchase of a dependabie automobile. When reduced to dollars and cents the interest on the outlay is exorbitant, the income being compounded daily from time saved, convenience, increased marketing and buying radius, reduced pasturage, benefit to health and elimination of costly horse feed.

That California offers the most ideal motoring conditions to be found on the face of the globe is an established fact. The wide reaches of the Golden State are crossed and recrossed by a network of surfaced highways linking city with city and putting farm and ranch in close touch with markets and distributing centers. Hundreds of construction gangs are ever at work under skilled engineers forging new links into the good roads system, while each district employs a small army of laborers for maintenance and repairs.

Public spirited automobiie clubs have signposted every artery of travei so thoroughly that it is impossible to go astray, while gasoiine and oil stations, furnishing free air and water. fairiy tread on each other's toes at junction and viliage. Best of all, there is no snowbound, blizzardy winter to send your car scooting into the garage for an enforced hibernation of three or four months. One can drive to market every day from New Year's to the thirty-first of December without fear of freezing the radiator, roosting in a snowdrift or becoming mired in the moist depths of a chuckhole.

There are in California more than 376,000 automobiles which, placed in procession, would stretch from the northern boundary of the state to the Mexican line. This caravan, traveling at parade speed, would consume several weeks in passing a given point. These motorists burn millions of gallons of gas each month, yet the price of the fuel is lower here than in almost any other region since nature has stored up untold quantities of crude oil and refining is a major industry.

Considering conditions in the aggregate it is little wonder that California is coming to be known as the land of "motorized agriculture." Growers of produce can be seen from dawn till dark hastening marketward or delivering to the customer direct a tonneau or trailer load of eatables fresh from the soil. This process is much cheaper and less risky than shipping by steam or electric freight.

Ownership of an automobile has developed a neat little business in perishables for many enterprising growers. Where, before, the land had to be devoted to staples because of remoteness from the railway or lack of rapid transit, many acres have now been opened to profitable truck farming. Others in more distant districts have arranged for the sale of such articles as eggs, butter and cheese through the parcel post system, the automobiie carrying their goods to the nearest postoffice in one-fifth of the time required by a horse and buggy.

In utilizing the passenger automobiie for delivery purposes three methods are used. The goods may be packed into the tonneau, placed on a trailer, or the tonneau be removed, affording a small platform to accommodate the load. The trailer is more convenient and has a great capacity

Agricultural News Notes of the Pacific Coast

Northern California

Lake County has five pear evaporators.

The Sacramento Valley now has eight large rice mills.

Yolo County's sugar beet crop this year is worth $360,000.

An orange tree in Chico, planted in 1852, is still bearing fruit.

Paradise in Butte County has shipped 30 cars of apples.

Marin County live oaks are being defoliated by the oak moth.

Chico voted seven to one for bonds for building a new high school.

Butte County olive growers are contracting their crop at $200 a ton.

Colusa rice men are worried over storage capacity; every warehouse is filled.

A rice farm two miles east of Williams, Colusa County, returned $380 an an acre.

Orland in Glenn County will ship 15 cars of oranges the first week in November.

Fruit shipments from the Vaca Valley, Solano County, totaled 1,045 carloads this year.

The airplane method of getting rid of the ducks in the rice fields has proven a success.

Martin Kuster of Wheatland, Yuba County, has 3,200 tons of rice which will sell for $700,000.

Rice will next year be grown as far south in the Sacramento Valley as the Mokelumne River.

Wyandotte, Butte County, last week received a large shipment of silkworm eggs from Italy.

At Vina, Tehama County, 65,000 pounds of dried peaches were shipped that brought 18 cents a pound.

A live dog was sent by parcel post from Winters, Yolo County, to Hayfork, Trinity County, at a cost of 35 cents.

The Mills Orchard Company in Glenn County extracted 9,000 pounds of honey from 120 hives, valued at $1,800.

Large numbers of ducks are dying in northern counties through drinking and swimming in the alkali water from the rice fields.

After spending $200,000 in grading and planting rice lands near Dixon, a party of Hindus abandoned it when the crop proved a failure.

Turkey raisers of Yuba County are fastening bells to the birds to scare away coyotes and to more easily locate their flocks in the heavy underbrush.

The Western Canning Company, a Chinese corporation, has purchased 406 acres of pear and asparagus land near Isleton, Sacramento County, from Hart F. Smith. The purchase price was $223,300.

Predictions of a $1 per pound price for Sacramento Valley hops before the close of the year will probably be fulfilled. The price is now 77½ cents, having increased from 60 cents within the past few weeks.

California ladybirds are doing very effective work against the citrus white fly pest in Florida orange groves, the Florida experiment station has advised the state secretary in Sacramento, whence the ladybirds were sent.

Central California

Madera has a bulb farm of 50 acres.

Lindsay will have a chrysanthemum show November 11-12.

The f. o. b. price for Tokays in Central California is $1.65.

Porterville is to have a peach tree nursery of a million trees.

Tulare turkey raisers are getting 35 cents a pound, live weight.

The big Ewell apple evaporator at Watsonville burned October 25.

The total apple crop of this season about Dunlap brought $80 a ton.

W. E. Vinson of Porterville realized $1,100 from one acre of pomegranates.

The first lemons from Porterville, two carloads, were shipped October 18.

The machinery for a new citrus packing house at Terra Bella has arrived.

Thompson Seedless rooted vines are selling for $45 a thousand and are scarce.

The Fresno farm bureau will hold hog auctions at Fresno November 7 and 21.

Fresno Poland China breeders will hold a sale at Fresno fair grounds November 19.

Sanger has such a large raisin crop that not enough receptacles can be found to hold it.

The Lodi women grape pickers have had their pay raised from 35 cents to 40 cents an hour.

Livingston, Merced County, is to have a public park and camping ground of 55 acres.

The Lodi dehydrator is a success. Raisins were thoroughly cured from fresh grapes in 17 hours.

Lodi received 199 empty cars in three days last week and the grape growers gloom is lifting.

C. B. Hunt of Porterville has shipped several thousand fruits from his Northrup avocado orchard.

Up to October 15 Watsonville had shipped 1,228 cars of apples, 500 more than to same date last year.

The California Peach Growers will issue a monthly publication modeled after the "Sun Maid Herald."

Crows Landing, Stanislaus County, has the largest almond tree, over 11 feet in circumference of trunk.

Twenty-five cars of Tokay grapes from Lodi brought $59,606 in eastern markets, and 34 cars brought $81,318.

Several small orchards of White Adriatic figs are being set out in the Terra Bella region of Tulare County.

Nine tons of poisoned grain for ground squirrels was distributed in the fields of Alameda County last month.

The California Prune and Apricot Growers Association is still short of cars and 10,000 tons of prunes are waiting.

Carl Nielsen of Sebastopol harvested 32 potatoes of uniform size from one hill, weighing 14½ pounds, a Coast record.

The Kerfoot Jones ranch of 108 acres at Bakersfield has been sold to the D. E. Georgia Farm Lands Company for $100,000.

Short feed in Nevada is causing stockmen to ship cattle to Central California to graze. Oakdale received two trainloads last week.

Southern California

Redlands will hold a flower show November 14-15.

Sixty cars of Valencias were shipped from Redlands last week.

The San Bernardino orange show has been set for February 13-23.

Cattle at Talbert, Orange County, are having an attack of blackleg.

The first snow in Southern California fell in Bear Valley October 25.

Highland reports three inches of rain to date; Chino and Claremont, 3.30.

Santa Ana's cannery is in need of 150 women to work on pimento peppers.

An enormous deposit of valuable black granite has been discovered near Perris.

Cotton sold in Blythe last week for $41.50 a hundred and cotton seed for $50 a ton.

The Blythe Producers Warehouse is the name of a late corporation of cotton growers.

Over 100 acres of lettuce will be planted in the Seeley district of Imperial County.

W. Hindman of El Cajon Valley sold his crop of wax beans for 10 to 12½ cents a pound.

Imperial Valley will have 8000 acres of lettuce and 2,000 acres of spinach the coming spring.

An Oxnard rancher received a shipment of three blue pigs from Massachusetts last week.

Brawley's 1919 cotton crop will bring $1,250,000, a million for cotton and a quarter million for the seed.

A price cutting war in the Imperial has brought the price of ginning cotton from 35 cents to 20 cents.

A Japanese at El Centro was fined $50 on October 24 for allowing Johnson grass to grow on his land.

The acreage rent paid by Japanese in the San Juan district of Orange County ranges from $30 to $75.

Members of the Hemet Walnut Growers Association have harvested 175 tons of walnuts this year.

The highest price ever paid for land in Stanislaus County was $1,000 an acre for a fig orchard at Ceres.

Cauliflower in carload lots is now moving in the Los Angeles section, two weeks earlier than last year.

The law against hunting on the state highways has been declared invalid by Judge Williams of Orange County.

C. R. Keller, an Oxnard rancher, has invented a machine for picking up beans and piling them in windrows.

Lima bean growers are rejoicing in the possession of the first payment of five cents a pound on the 1919 crop.

A prize cotton picking contest for the best eight hours work in the Palo Verde Valley will be decided December 24.

Ventura apiarists state they will have to feed their bees heavily on account of a short flower supply last season.

One Moorpark, Ventura County, grower has sold 2,500 sacks of Lima beans at $13.80 per hundred. This is the association price of $14.50 less brokerage.

The Coast and General

Hood River's 2,000,000 box apple crop is practically harvested.

There are 3,000 acres of walnuts in the Yamhill section of Oregon.

In Washington as high as $20 a ton was paid by cider mills for cull apples.

Filberts are being extensively planted in several districts in Washington.

The alfalfa weevil is destroying much alfalfa in northern Utah and southern Idaho.

The Mosier, Oregon, district raised 100,000 boxes of apples, double the output of last year.

Cattle, sheep and horses are being shipped to hay producing sections in Washington from Idaho.

The state crop agent of Idaho estimates the potato crop of that state as 72 per cent of normal.

Apples are going out of Wenatchee, Washington, at the rate of 150 cars a day, and 1,600 cars to date.

In Washington the shortage of teachers has closed 261 schools. Douglas County needs 50 teachers.

Honolulu is facing a milk famine Destruction of tuberculous cows is said to be one of the chief causes.

Otto Myland, in the Yakima Valley, Washington, sold his crop of 10,000 boxes of Delicious apples at $4 a box.

A shipment of high grade Holstein cows has been made from the Salt River Valley of Arizona to Havana, Cuba.

Early Ohio, Red River Ohio, Bliss Triumph and Burbank are the potatoes most grown in the North Pacific states.

Colonization of 100,000 acres of virgin lands in British Columbia by English settlers has been decided on by the government.

The 1919 citrus crop in Texas is a failure in nearly every district. Some grapefruit is grown but not enough for home consumption.

Hood River Valley apple growers large crop has caused a shortage in supplies; picking bags, nailing hatchets and nail strippers are needed.

Twelve live blue foxes, valued at $500 each, arrived in Seattle from Alaska. They are for the United States government animal breeding farm.

The varieties of walnuts recommended for the colder parts of the Pacific Coast are: Franquette, Mayette, Chaberte, Parisienne and Columbia.

Orchards of hardy Persian walnuts of the French types are now fruiting in Northern California, Oregon, Washington, British Columbia, Montana, Wyoming, Idaho and Utah.

The Chicago board of trade has offered $10,000 in prizes for the best corn and grains shown at the International Grain and Hay Show to be held in Chicago November 29 to December 6.

A striking feature of the Cotton Carnival held in Mesa, Arizona, October 23-25, was a pile of cotton at the intersection of the two principal streets of the city, valued at more than $10,000 This monument of cotton bore the legend: "This Is What Made Us." A cotton gin in operation was also shown on the street.

Is There an Anti-American Campaign?

INTEREST in the discussion prevailing on the Pacific Coast, and, we may add, to a very limited extent in all sections of the United States, as to whether America is following a wise course in admitting the Japanese has been increased by expressions of Japanese newspapers and Japanese in this country. Often these expressions are couched in most diplomatic language and deprecate anything which might lead to unfriendly feeling between the two great nations. Again, as in the case of a paper printed in the Japanese language in San Francisco, a boastful and even half-threatening attitude is taken. The paper referred to is The New World, which published the following article, translation of which appeared in the Sacramento Bee and other papers:

"We who are here in America, where so many anti-Japanese parties exist, must have this sort of determination. What can Phelan do? What can Inman do? Both are but ordinary men. Their ability is nothing unusual. Their influence is only that of a crowd.

"When we of the Yamoto race rise with a mighty resolve, their opposition will be as futile as an attempt to sweep the sea with a broom.

"It is only because there is so much fear and anxiety on the part of us Japanese that they think they can undertake such big things.

"Even if photograph marriages should be prohibited, we cannot be stopped from leaving our descendants on this American continent. Even if not a single Japanese woman comes, it is not possible to prevent the seed of our great Yamoto race from being sown on the American continent by marriages with Americans, with French, with Indians and with negroes, especially since there are already 100,000 Japanese here and 5,000 children are born annually.

"Phelan and Inman cannot stop this great force. What stupidity! What ignorance of a mighty force!

"Again let us consider the land law. Supposing that the ideas of Phelan and Inman were carried out, and we Japanese were prohibited from owning or cultivating land. We could find some way to continue farming and make a good living as producers. If we cannot conveniently do so in California we shall go to other states and devise some plan. Even the laws of California are not forever unchangeable.

"The day will come when the real strength of the Japanese will make a clean sweep of all laws.

"Even the Kaiser's empire was destroyed when its time came. What can Phelan and Inman, whose influence is less than a drop in the great ocean of world tendency, do to stop the forward movement of our Yamoto race?

"We will say: 'Let there be a hundred or a thousand anti-Japanese movements; let laws be made; let laws be amended. Foolish agitators will have their day; wise ones will some time raise their voices. All these are temporary, but our great racial activities are eternal. All we have to do is to stand firm on the single point of justice, unite our strength and move forward energetically in various quarters of the business world'."

Another statement of the situation between the two countries is that made by Toyokichi Iyenaga, professorial lecturer in the department of political science, University of Chicago. In an address touching upon the case of Japan and the peace treaty he says:

"Notwithstanding this bond of amity across the Pacific, I cannot shut my eyes to the dangers involved in the present situation. I fear that there might be a temporary lapse of mutual good feeling between America and Japan, with no slight consequence upon the Chinese-Japanese relations, if the present campaign of slander, abuse and misrepresentation of Japan is left unbridled, for it not only poisons the minds of the American people but is bound to react on Japan.

"I have faith in the sound common sense of the Japanese people, which will enable them to remain calm and to rightly understand the origin and worth of the present entirely unexpected anti-Japanese wave. At the same time I beg permission to appeal most earnestly to the statesmen and leaders of public opinion in this country to vivify and strengthen those permanent interests and forces that make for peace and thus paralyze the evil elements that act to bring discord."

But, touching upon the more immediate situation in California and upon the colonization efforts being made by the Japanese, the Japanese-American, published in Los Angeles, says, as quoted by the Los Angeles Herald:

"Let those who live in separate houses immediately live together in one house. Let newly married people at once adopt sons and have them registered. Let married people without children immediately adopt sons and immediately send for them and bring them over. Awake! Even if we cannot expand our country's borders let us expand with all speed the Yamoto race, of which we are justly proud."

In other words, if we understand the matter rightly, the Japanese have secured the entrance of picture brides in order that the Japanese in this country may be increased, now the pretext of adoption is to be used in order to more rapidly secure admission of still more Japanese who can hold title to California lands.

Takahida Okada, visiting California at the request of the Japanese government, to investigate the Japanese situation here, is of the opinion that American prejudice against Japanese immigration is founded on misapprehension of Japanese ideals. The Japanese, according to Mr. Okada, have the same ideals as Americans, and they and their children wish to become Americanized. They will be glad to cooperate in the economic development of the state. Therefore, he concludes, their immigration ought to be permitted.

FROM THE OTHER SIDE

Meantime Californians have reached the resolution stage as is indicated by a few reports picked at random from the state press.

Yuba County Chamber of Commerce

The Yuba County chamber of commerce has resolved and petitioned Governor Stephens "to instruct the state board of control to make an investigation into leases of land in California made to aliens ineligible for citizenship, especially to ascertain the identity of the parties who have granted leases."

We may add that the governor has asked for a thorough investigation, the findings of which will be presented to the next legislature.

Federation of Women's Clubs

The California Federation of Women's clubs in session at Sacramento indorsed a report made by a special committee favoring the exclusion of Japanese from California as embodied in a resolution which was drawn up by Mrs. Bradford Woodbridge of Roseville, a former president of the federation.

California Grocers

"Whereas the Japanese are pouring into California in such numbers and entering into competition with the white man and whereas their standard of living is such that it makes it impossible for the white man to live decently and meet his competition, and whereas the Japanese subjects his women folk to a veritable state of slavery in order that his ends may be accomplished, be it resolved that we, the California Retail Grocers and Merchants Association, do hereby endorse the anti-Japanese movement championed by so many civic organizations, senators and congressmen, as well as most of the daily press.

Resolved, that we use our best efforts to secure suitable legislation with state and national bodies to curb this ever increasing menace, and if results cannot be accomplished through proper laws restricting immigration and land ownership, that the advisability of an alien tax be considered, as a proper solution of this problem."

The Stanislaus County Board of Trade

"We believe that a grave menace faces the state in increasing numbers and activities of its Oriental population; that the gentlemen's agreement between the United States of America and Japan is being systematically violated in letter and spirit by the Japanese; that there is an ever increasing number of picture brides; that one of the gravest conditions is the steady increase in number of Japanese arriving at the age of majority and being entitled to the right to vote because of the fact of being born in this country, although their parents are ineligible to citizenship; and that in view of these menacing conditions, the gates should be closed permanently against Asiatics and they and their children barred from American citizenship."

El Nido Farm Center, Merced County

"Be it resolved, that the El Nido farm center most heartily endorses efforts of our representatives at Sacramento and Washington to regulate the purchase and leasing of farm land in California by the Japanese."

The American Legion of California

"The American Legion of California, meeting in convention in San Francisco adopted resolutions asking that Japanese 'picture brides' arriving here from Japan to become brides of fellow countrymen already in this country be denied entry. There was demanded, also, cancellation of all leases of land to corporations controlled by Japanese or to the American-born children of Japanese."

N. S. G. W.

The Native Sons of the Golden West of Sacramento have passed resolutions and asked all other parlors of the Native Sons and Daughters to urge upon California congressmen to work for laws prohibiting Asiatic immigration.

California Auto Trades Association

The recent convention of the California Auto Trades Association, assembled in San Jose, as reported by the San Jose Mercury, passed a resolution "in which the rigid exclusion of all Japanese was demanded on strictly economic grounds. It was pointed out that the picture bride practice results in great increases of the Japanese population in California, that the exclusion act is thus brought to naught and that the communities in which the Japs settle and thrive suffer great economic losses so far as the white populations are concerned."

The Thermalito Farm Center

"Resolved, that we use any lawful means to prevent further acquiring of land in Thermalito by Japanese and that the chairman be instructed to present the resolution to the directors of the farm bureau for consideration in other centers in this county.

"The feeling is that Thermalito should be made the home of white men and that the coming of the Japanese farmers will mean the gradual going out of the Americans from the district."

Camino, El Dorado County

The farm center at Camino, El Dorado County, has discussed the Japanese problem, especially with reference to ownership of lands by the Japanese and to the fact that packing house labor is now almost entirely Japanese. White women are anxious for work in the packing houses but not under present conditions. It is believed, however, that another year in that community the packing will be largely done by white women.

Fourteen Counties Association

Addressing the immigration commission at Washington, D. C., President Van Bernard writes:

"This association has learned with great interest of the report that your honorable committee expects to visit this coast to secure first hand information on the problem of curbing Asiatic immigration. We urge you to make this trip and we assure you of our utmost cooperation in securing the information you seek and in case you do make this visit we are certain you will return convinced that the future prosperity of this coast and its political and social institutions are doomed unless a solution of this problem is found."

El Dorado County Citizens

"Whereas, the Japanese problem is recognized by all the agricultural population of California as a serious menace to our agriculture and institutions and, whereas, this is becoming acute in El Dorado County at this time therefore; be it

"Resolved, that the fruit companies should exhaust every other resource before advising growers to sell their fruit or rent their orchard to Japanese It is the opinion of the committee that these companies should aid the labor bureau by encouraging fruit growers to list their labor wants early enough in the season, so that an opportunity is afforded to secure help other than Japanese; that they should use every effort to secure white labor and should encourage and conduct packing schools to teach local men, women and children to pack fruit, therefore; be it

"Resolved, that the fruit growers and packers should be severely criticised and condemned for not listing their labor needs during the harvest season early in the year with the county labor bureau, so that white help can be obtained, therefore, be it further

"Resolved, that fruit growers should incur the censure of the entire community for leasing their property or selling their crops to Japanese without first exhausting every other means of harvesting their crops without loss therefore, be it

'Resolved, that the county chamber of commerce should be asked to take action in conjunction with the county farm bureau looking toward a remedy for this evil by crystallizing sentiment in Placerville and elsewhere with regard to the Japanese menace and toward assisting the fruit growers in harvesting their crops."

United States Spanish War Veterans

The United States Spanish War Veterans, in session in San Francisco recently, adopted resolutions urging congress to pass legislation prohibiting immigration of Japanese.

The Evening Pajoronian

"We have no quarrel with Japan as a nation, but that is no reason why we should let her encroach upon us and drive our people from the land. The time to adopt the slogan, 'America for Americans' is here, and we should put up the bars now and keep them up. Safety first should be applied here now. Let us demand that Oriental immigration be stopped now and for all time."

Los Angeles Times

"The Times concedes that the real fault has been with our own government. It has paid scant heed to the protests against Japanese immigra-

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

GOLDEN DAY

One of the first to encourage co-operative marketing of California's products was P. J. Dreher, for many years vice president of the Exchange and for almost its entire existence manager of the San Antonio Fruit Exchange. Some time since he retired from the more active work of the Exchange and the many friends of Mr. and Mrs. Dreher at Pomona recently tendered a great reception in honor of the fiftieth anniversary of their wedding.

HOME WORKERS

The editor recently got in line with a procession of farm bureau conference workers. We believe they call it a conference, bnt in any case it is somewhat of a cross between a picnic and the old time farmers institute. The attendants have to go in gas wagons. They met first on a potato grower's ranch where the successes and failures of that potato grower were explained by experts who had come from various sections of the state. This first session occupied perhaps 30 minutes, then "Follow the leader" was the cry and the machines started for another ranch, one or sometimes a dozen miles away, and the gait which those farm bureau leaders can hit with a little Ford or Chevrolet over a dirt road makes a staid creature who is just learning to drive the gas wagon take on a worried look. But it did show one thing: those farm bureau fellows cover a lot of ground and are talked at by a lot of people.

ARMISTICE DAY

Next Tuesday is the anniversary of the day when all the world went wild because of the final signing of the armistice between belligerent peoples in the greatest of world wars. The year has been occupied in completing the terms of peace. By one great nation, America, these terms have not yet been accepted. Presumably they will be, and before many weeks a league of nations will be formed which will prevent another such great world war. That is the prayer of all peoples.

ENDORSED BY FARM BUREAU

The entire foundation of the farm bureau movement rests upon the rock of cooperation. Cooperation alone is behind every movement the farm bureau makes, whether it be social or for greater efficiency in farm operation or marketing of products. The farm bureaus of the state have noted the attack of large interests on some of the state's cooperative movements. They are naturally impelled to resent this attack.

One farm bureau, that of Napa County, noticing the article "Bunk—An Editorial," took action in a recent meeting of the directorate when 36 directors were present, which action is reported in the following from its president, Henry Wheatley:

"Your article entitled, "Bunk—An Editorial," was called to the attention of the directorate of the Napa County farm bureau, Saturday, October 11, at which time an excellent attendance of directors was present. It was the opinion of those present that the stand taken by the 'California Cultivator' in regard to farmers' cooperative organizations generally should be unanimously endorsed. We believe that the farmers of the county will stand back of your publication.

"There is no question in our minds that the time is coming when the farmers of America will be forced to organize, and in case they fail to do this we may have developed in this country a peasant class of farmers similar to those in parts of Europe.

"The recent investigation as to the high cost of living again proves that the unorganized farmers are the ones who are made to bear the burden. Hogs sold in Napa County prior to the investigation at 20 cents hundred weight live weight; now they are selling at 14 cents. It is not the organized packer that suffers but the unorganized farmers.

"Such articles as yours are doing a great deal toward getting the reading public to see the facts as they are. The article to which I am referring was appreciated in Napa County and it is my opinion that the farmers of the state generally appreciate the stand you have taken in behalf of farmers cooperative organizations."

OLIVE SCARE

Some weeks ago in Canton, Ohio, a dinner was given by a lady who had been in California, and as a special treat she served California ripe olives. Five of the guests died within a few days and the physicians declared the deaths due to ptomaine poison in the olives. Later in Michigan a case of ptomaine poisoning was also charged to bottled olives, and now the board of health of that state has urged the hotels to remove olives from their menus and has asked for legislative action which will prevent the entrance to the state of olives either ripe or green. It is alleged in the news reports that examination has been made of the olives and ptomaine bacteria found in them.

In view of the fact that Californians have for generations lived on olives green and olives ripe, and that the state has never yet learned of a case of poisoning from them, there will be little credence given to the Eastern reports. Notwithstanding that, the California olive will probably be seriously injured by the present campaign. Olive growers should make fullest investigation and be prepared to tell the truth regarding this most healthful and luscious of foods.

MARKET BASKET WEEK

Automobile people have suggested and are planning to make November 15-22 a motor-to-the-country-and-fill-your-market-basket week. Automobile clubs all over the country are working to the end that this shall be one great week and will be used to show to city people the advantage of a trip to the producing districts for the purchase of supplies for the home, especially for purchasing supplies for the Thanksgiving dinner. One other slogan is "From the farm to the table," and while this movement may be suggested in the interest of city people purchasing for lower prices, the price will be up to the farmer.

As the Cultivator suggests on page 620 this week, there is an advantage in advertising on bulletin board at the entrance of the place. Along the roadside leading from the cities are many fruit and produce stands. At first these stands were kept by farmers offering their own products. More recently professional hucksters have taken up the plan, which has proven somewhat embarrassing to the producers. However, there are suggestions for the farmer whose family can supply an attendant at roadside stand, and especially will it be wise to consider such plan during "Farm to table week."

BETTER POTATOES

A step which will mean an increase in the potato production in California was taken at the time of the Los Angeles County farm bureau meeting at Burbank last Monday. The occasion was a potato conference, an informal affair staged by the Los Angeles County farm bureau, but it had attracted to the conference potato growers from Orange, Kern, Santa Cruz and other counties. A Santa Cruz visitor suggested that while he had grown potatoes almost since babyhood in the extreme northeastern county of the United States, and later in California, he still had to confess that he learned enough by attending this one conference to justify his trip from Watsonville to Los Angeles. This statement, together with the fact that a large number of potato growers made similar remarks at the close of the day's conference, indicates a renewed interest in the producing of this staple. Still better, there were steps taken which will doubtless lead to a potato growers organization and also a seed potato growers association. California is one of the best potato producing sections and this industry has never been given its fullest development.

SPECIAL SESSION

There continues insistent demand upon the governor to call a special session of the legislature to consider the invasion of Japanese farmers on California lands. The governor called the special session which immediately ratified the woman's suffrage amendment. He refuses at this time to call a special session to discuss the Japanese question. He feels that greatest care should be used in approaching a problem which may result in international complications. The governor is gathering fullest information which he hopes to place before the state legislators when they shall be asked to act on the matter. Senator Inman has announced that the governor has promised this shall be not later than January 5.

It is very probable the governor is right. However, the pressure will continue for instant action until something is done to redeem the state. As an indication of the temper of Californians the following expression in the Pajaronian is but a sample of many others:

"It is then impossible for the red-blooded American citizen of California to understand why he should sit quietly and let another nation encroach upon our territory and through fraud secure control of the best of our agricultural lands. The danger to America from Germany pales into insignificance when compared to the menace to America and American institutions that this inroad of an alien race presages. It is an insidious invasion that from its uncanny peacefulness has reached an extent unbelievable to the average citizen of the country, although it is only too well known to the people of California."

BETTER COMMISSIONS

The efficiency of the horticultural commissions has been shown during the past year to a greater extent than in any period of the state's history. Their work has been somewhat enlarged by the standardization act which creates an entirely new field of horticultural police work. In addition two other police duties of the commission, those of pest quarantine and control, have been greatly enlarged.

The report of Los Angeles County's commissioner, H. J. Ryan, contains one item of large interest in that "26,825 incoming trees and plants were found to be unfit to pass and were treated or destroyed or returned to point of shipment." How large a saving this may have made to the horticultural interests of the county may never be known; it is possible that some of the returned shipments might have been passed, but certainly the lessons which have been taught the California fruit growing industry because of the lax methods of years ago convince the great majority that the only safety of the country lies in strict quarantine regulations.

But here is the best part of Commissioner Ryan's report: "The control of scale insects in citrus orchards has become so generally practiced in this county that it is seldom necessary to serve notice upon the commercial grower to clean his trees. Of the hundreds of acres of citrus orchards which were fumigated in various inspection districts during the past season it was necessary in but five cases to serve notices and ask for bids to do the work." And this not because of fear of the law, but because of recognition of the fact that self interest demands a thorough cleanup.

Lime-Sulphur

By H. P. Barss, Plant Pathologist Oregon Experiment Station

Commercial lime-sulphur ready-to-use-mixture is now so perfectly and economically prepared that it is seldom the open fire method of making the solution is followed by the orchardist. Even the large orchardists have found its use most satisfactory. For those who prefer to make their own or for those who wish information as to method of manufacture we quote from Prof. Barss of the Oregon experiment station.

THIS mixture has in recent years come to take the place of Bordeaux and other fungicides for the control of many plant diseases. Its effectiveness as an insecticide against San Jose scale gives it an added advantage. It is a combination of lime and sulphur, manufactured in concentrated form and diluted with water to various strengths for various purposes. Like Bordeaux, this material under certain conditions, has drawbacks which must be taken into consideration.

Commercial Concentrated Lime-Sulphur

This material is now made and sold in large quantities by many reliable firms in this state and elsewhere. The commercial solutions are usually fully equal, if not superior to, the average home made lime-sulphur.

Unless a grower has a large acreage or unless several growers can combine and make lime-sulphur for all at one plant, it is usually more economical to purchase the commercial article. Taking into consideration the cost of materials, equipment. time and labor, it may be said that the cost of making lime-sulphur in small quantities on the farm will generally be considerably greater than the cost of the commercial article at prevailing prices.

How to Make Lime-Sulphur

Lime-sulphur may be prepared by boiling the materials over an open fire, but this method is less satisfactory and uniform in its results than that in which live steam under pressure is used in the boiling process.

Chemist H. V. Tartar of the Oregon agricultural experiment station, after testing various ways of making this material, recommends the following method as one which if carefully followed will give a practically uniform product of high quality, testing just about 30 degrees Baume. "Take 110 pounds of good quality stone lime and slake it. Then take 220 pounds of finely ground sulphur, sifted to remove lumps, and mix carefully with a little water until a rather thick, but smooth, paste is secured. Add the sulphur paste to the slaked lime in the vat or cooker. Then add water to make the volume of the mixture 108 gallons. Turn in the steam. Sufficient steam pressure should be provided to bring the material to a boil in about twenty minutes. If much longer is required the condensing steam will dilute the solution too much. To insure complete combination of the sulphur and lime the material should be thoroughly agitated through the whole of the cooking. After it has reached an active boil, allow the mixture to continue boiling vigorously for 30 to 35 minutes. Never boil more than 35 or 40 minutes, as changes begin to occur that will reduce the test of the solution. The solution should be allowed to cool as rapidly as possible. After the sediment is allowed to settle the supernatant liquid is drawn off. This should give about 85 gallons of concentrated lime-sulphur solution testing about 30 degrees Baume. The cooking vat should never be filled more than two-thirds full, since the mixture will seethe up a great deal while the chemical action is going on. In making up lime-sulphur in larger or smaller quantities the same proportions of lime and sulphur and water should of course be used."

Where the cooking is done in a 50 gallon barrel or kettle the following formula gives about the quantities desirable: 30 pounds good quality stone lime; 60 pounds finely ground sulphur; water sufficient to make 30 gallons.

If prepared in kettle with fire beneath, the volume should be increased to about 35 gallons at the start to allow for evaporation.

Dilution

The grower who makes his own lime-sulphur should always secure from the druggist a Baume acid scale hydrometer to test his stock solutions. Otherwise he will have no idea as to the correct amount of water to use in diluting for use in spraying. The commercial solutions have the strength marked on the barrel. The following table shows the number of gallons of water to use for the usual winter or dormant strength and for the average summer or foliage strength with each gallon of concentrated lime-sulphur ranging in test from 25 to 35 degrees Baume. Peaches should not be sprayed with lime-sulphur of any strength when leaves are out.

Lime-Sulphur Dilution Table

Hydrometer test of concentrated solution	Number of gallons of water to one gallon of concentrated solution	
	Winter strength	Summer strength
35	9	45
34	8¾	43
33	8¼	41
32	8	40
31	7½	38
30	7¼	36
29	7	35
28	6½	33
27	6¼	32
26	6	30
25	5½	29

The different proportions of lime-sulphur recommended for the various spray dilutions are based on the use of a concentrated solution testing approximately 32 degrees Baume. If the stock solution tests weaker or stronger than this the amount of water used to dilute should vary accordingly.

Injury

Lime-sulphur, even in very dilute form, is liable to injure peach foliage severely. Under certain conditions prune fruit and foliage have also been injured by it. Even apple fruit and foliage often suffer, particularly in the late spring when very hot weather occurs. The reasons for the injury are not clear, but the use of lime-sulphur should, if possible, be avoided for the late apple scab sprays, especially in sections where spells of extremely hot weather are likely to occur. If the fruit is sufficiently developed, Bordeaux may be substituted and such materials as atomic sulphur may prove to be satisfactory if certain precautions are observed. Self boiled lime-sulphur also ought to be harmless and of some value as a substitute.

Combinations

Lime-sulphur may be combined without detriment with nicotine sulphate preparations to control plant lice and with arsenate of lead for codling moth and foliage eating insects, or with both nicotine and arsenate together. It can not be used safely with a soap or resin sticker.

CITRUS GROWERS FARM BUREAU MEETING

By H. E. Drobish

Robert Hodgson, farm adviser of Los Angeles County and former resident of Butte County, addressed a meeting of citrus growers in Wyandotte Tuesday evening, October 28. A large crowd gathered from all the near by orange growing districts to hear Mr. Hodgson discuss the subject of June drop. He stated that the June drop of oranges and olives was probably caused by the same fundamental factors. Scientific evidence shows that when the transpiration of water from the leaves is faster than the absorptive power through the roots abcission takes places and the fruits drop. Mr. Hodgson said that even though June drop was caused by the climatic factor this could be altered by the growing of cover crops and the use of a mulch and increasing the plant food in the soil. He especially stressed the point of using animal manure in order to prevent the drop of the fruit and said that a tree could get along with half the amount of water ordinarily required if there is an abundance of plant food in the soil.

Southern California growers are using 15 to 20 tons of manure per acre and Butte County citrus growers must realize that growing oranges without plenty of fertilizer is not a profitable venture.

Dr. H. S. Fawcett of the citrus experiment station also addressed the meeting on the subject of citrus blast. Dr. Fawcett, in cooperation with the farm adviser, has outlined experimental plans for determining how to handle blast. Several growers in the Wyandotte and Thermalito sections are having plots of trees sprayed with various solutions and it is hoped that at least one of these may prove to be beneficial in controlling the blast this winter. Dr. Fawcett has been in the Oroville district for several days supervising this work.

Agri GYPSUM

Gypsum, if applied to your land, will release bound-up elements that are valuable and essential as plant foods.

Authorities on soil chemistry and plant foods everywhere recommend and advocate the use of gypsum where the soil is pregnant with useful elements but which, being combined with other elements, render them useless until released by the addition of Gypsum.

Gypsum unlocks the soil, liberates nitrogen, potash, and phosphorus of the soil for the use of crops. Use gypsum as a "soil stimulant" on your truck crops as well as other crops.

For many years Gypsum (commonly called "land plaster") has been used by farmers and horticulturists with the same beneficial effects in every advanced agricultural country in the world.

Nitrogen is the most expensive of plant foods. Save the nitrogen in your manure by using gypsum on it as a preservative. (Every dollar's worth of gypsum applied to manure will save two or three dollar's worth of nitrogen.) The calcium and sulphur of the gypsum will go on the land with the manure and pay for the gypsum several more times.

Gypsum Is a Specific for Black Alkali

It transforms the harmful sodium carbonate of the alkali into harmless calcium carbonate.

Gypsum supplies the lime calcium in soil deficient in lime and also supplies sulphur which is a fertilizer.

A maximum crop of alfalfa requires 45.9 pounds of sulphur per acre per year which gypsum supplies

Gypsum furnishes calcium and sulphur to crops. Both of these are necessary crop foods. Calcium is deficient in many soils and sulphur is scarce in practically all soils.

California crops especially benefited by gypsum include melilotus, vetch, alfalfa, beans, peas, potatoes, rice. The legumes use much sulphur (gypsum is calcium and sulphur). **Citrus and deciduous groves are benefited by the action of gypsum in liberating essential elements in the soil.**

Buy Gypsum of the largest producer of Gypsum in the world and get it ground fine, and properly prepared. Inquiries as to what may reasonably be expected of Gypsum as it would affect your soil can be determined by soil analysis, which we can arrange.

We cordially solicit your inquiries.

The Home Orchard in California

By J. W. Mills

THE home orchard should be planned to give not only variety of fruit but succession of ripening, so that fresh fruit may be had continuously during the season; therefore, the plan of selection is very important.

Soil

Select your trees from a reliable nursery, then exercise care in handling them until planted. If the ground is not in readiness for planting when the trees arrive, dig a trench large enough to admit the roots. Loosen the bundle of trees, separate the roots and put the trees in the trench. Fill in with soil and pack firmly about the roots to shut out the air. The trees may be kept "heeled in" for a considerable time, but must be planted before the buds start to grow.

Time to Plant

You may plant at any time during the dormant season, but preferably in November or December. However, trees do well planted in February if you cannot plant earlier.

How to Plant

Dig the hole large enough so the roots will not be crowded. Fill the bottom with good soil and plant the tree one inch deeper than it was in the nursery. Firm the soil well about the roots with the foot as the hole is being filled. This is very important. The top of the tree should now be cut back.

Care After Planting

Apply fertilizer and work it in with the cultivator. Stable manure is the best, but any vegetable matter that decays readily is beneficial. Cover crops may be sown in the fall and turned under. Give frequent cultivation the first part of the season after planting to keep weeds down.

Varieties

Varieties of the different fruits found satisfactory under California conditions are:

Apples—Bellflower, Yellow Newtown, Gravenstein, Rome Beauty, White Pearmain.

Pears—Bartlett, Winter Nelis, Anjou, Seckel.

Prunes—Sugar, Agen (French), Imperial, Silver.

Peaches—Phillips' (yellow cling), Foster (yellow cling), J. H. Hale, Elberta (yellow free), Muir (yellow free), Alexander (white cling), Opulence.

Plums—Wickson, Kelsey, Clyman, Burbank.

Cherries—Royal Ann, Bing, Tartarian.

Apricots—Royal, Newcastle.

Figs—Mission (black), Kadota, Calimyrna (white, caprified).

Grapes—Thompson (seedless), Tokay (red), Cornichon (black), Muscat (white), Hamburg (black), Gros Colman (black).

Raspberries — Cuthbert (northern part), Surprise (southern part).

Blackberries—Mammoth, Himalaya, Crandall.

Strawberries — Marshall, Brandywine, Oregon.

Currant—Perfection (coast).

Pruning

The intelligent way to prune is to begin when the tree is first set out and then each succeeding season cut out the branches that are not needed. This should be done during the dormant stage. About three to five branches should be selected to form the "scaffold" of the tree, with a view to the symmetry of the tree. If possible have a space of two inches vertically between adjacent branches. This tends to prevent splitting when heavily laden with fruit. After the second season superfluous branches should be cut out to admit the air and sunshine, and there should be some heading back of the previous season's growth. When branches are removed the cut should be smooth and close to the body of the tree. Do not cut too much wood out. Head back and thin out the top. If possible do not cut off side branches. If pruning is too severe it delays the bearing period. If the wounds made in pruning are too severe to heal coat with a good grade of white lead thinned with linseed oil.

Spraying

Spraying is one of the most important if not the most important operation of the orchard. It should be done at the proper time and not put off for a more convenient time. It prevents insects from becoming serious pests and prevents fungous diseases from gaining a foothold. A large barrel outfit may be used but a gasoline power outfit will do better work and should be used on large trees. The standard insecticide and fungicide most commonly recommended for a dormant season spray is concentrated lime-sulphur solution, which is easily made at home in the proportions of 50 pounds rock lime, 100 pounds sulphur, water to make 50 gallons. This keeps indefinitely if strained and stored in full stoppered barrels. Dilute this according to your spray calendar when using, and use at once.

South Needs More Peaches

By Ernest Braunton

THIS year the larger canneries echoed the same old cry: "We need more peaches, better peaches, and a greater variety." Canneries in peach growing districts of the South were able to care for the full local crop, as in years past. The supply has not sufficiently increased to meet the growing demand. The larger canneries of Los Angeles still depend on shipping in their total peach supply from the San Joaquin Valley. This year the railroad strike practically shut off this supply; the crop was diverted to the canneries near by that could easily be reached by motor truck. Los Angeles canned few peaches.

Yet the peach crop in the South was a good one, in many sections the best known. Down in the Hemet-San Jacinto section they were claiming that Phillips Cling this year grew nearly as large as grapefruit. Certain it is that they were the largest ever seen and the crop was good. But the fact remains that there was no surplus beyond the needs of the local canneries and none were sent to Los Angeles. Nearly all peaches consumed in Los Angeles, both table and canning varieties, come from the north.

It seems that except in a few sections of the south, such as the one noted, growers have not yet determined what varieties are best to grow. One experienced handler was asked what table peaches were most in demand. He stated that in the order of their importance he would name Early Crawford, Elberta and Tuscan Cling as the three leaders he preferred. But there was a marked shortage of these during the past season and the outlook is good for the planter and poor for the ultimate consumer.

Canning Varieties

To determine those most in demand the writer visited the large plant of the California Packing Corporation in Los Angeles. The superintendent, E. J. Kitterman, looked over the list shown him of the varieties he stated last year were the best and said there was no change either in demand or his views, Lovell continues to be the best of all for canning. This view may be colored by the fact that it is the best shipper, for this cannery gets its entire supply from north of the

Tehachapi, over 2,000 tons in a normal season. Yet Mr. Kitterman stated they would welcome home grown peaches; but the surplus is too limited and the cost of collecting in small lots would be too great. They must buy where the supply is heaviest. It is quite evident the South should plant more peaches.

Next to the Lovell in freestones come Muir, Crawford and Foster. At present other varieties are not asked for but it is up to the grower to show what are best. The canneries want the best peaches and care not what the name. In the clingstones they stand in the order of their desirability as follows: Tuscan, Phillips, Orange, and Sims. It is probable Sims will move up the list, perhaps to the head, but it is yet little known, though of the highest quality. There are 50 varieties listed in California catalogs and but a small per cent has been widely planted. Every planter should try a few of each variety known to do well under conditions of soil and climate nearly similar. The varieties named are now the ones most in demand in all parts of California. The normal season for peaches runs approximately from July 20 to October 20, but the source of supply sets the season and their ripening period in some localities is at considerable variance with that of the same varieties in other parts.

Apricots

Apricots this year were plentiful but poor in quality. In the South they are mainly Royal, with a few Moorpark. Farther north one finds Hemskirke and Blenheim. Apricots should have been thinned. Had this been done the returns would have been greater for the canneries prefer large fruit. Thinning brings larger size, better color, improved flavor and an equal tonnage. The cannery run for apricots is generally from June 20 to August, much shorter than the peach season. But the crop of good apricots is as short as the peach crop and investigation fully proves that we need more stone fruit.

TAKE CARE OF THE ROOTS AT PLANTING TIME

The root system of the tree should be pruned just before setting. The tap root should be preserved. The main laterals should be shortened to about six inches. The small fibrous roots should be pruned off. This is very important since if they remain intact they are an incumbrance to the tree. These fibruous roots not only die, for the most part, but they prevent getting the soil in close contact with the essential larger roots. As trees are ordinarily handled the small fibrous roots dry out and die before the tree is set. They coil more or less around the larger roots like a mass of curled hair. Even if the tree can be dug and planted immediately the fibrous roots cannot be depended upon to start new growth unless a mass of moist soil can be moved with the roots so as not to disturb the fibrous roots in the soil. Even the naked fibrous roots, if not dried out, are bent so much in setting that they cannot function.

If a main root is more than six or eight inches long it should be shortened. Long roots cannot well be set without bending. A bent or twisted root does not function so well as a shorter root which lies in its normal position. If the end of an essential root has a ragged wound it should be cut back to fresh, healthy tissue, with a clean, smooth cut. If, however, the end of an essential root has calloused and is healthy, it should not be cut unless the root is too long to plant without bending.

TRADE TERMS STANDARDIZED

A set of 28 rules and definitions of terms used in the fruit and vegetable trade has been worked out by four of the largest produce trade organizations. It is an outgrowth of the cooperation of these four organizations with the food administration and the bureaus of markets of the United States department of agriculture. Included are definitions of "tomorrow's shipment," "today's shipment," "f. o. b. sales or quotations," "c. a. c. sales," and "minimum and maximum loading." Wide adoption of these rules and definitions will mean fewer misunderstandings between shippers and receivers, and the bureau of markets, therefore urges that they be adopted by all individuals and firms handling fruit and vegetables.

TREE PLANTING LAST YEAR

Horticultural Commissioner Ryan, of Los Angeles County, has compiled figures as to planting in that one county for the 12 months ending on July 1. While a great peach producing county, it is to be noted in the table below that compared to citrus and other fruits peaches were hardly touched. The two favorites in Los Angeles County are Valencias and walnuts. Nearly ten acres of Valencias were planted to one of Navels, a complete reversal of proportions from a period of, say, ten years ago. Figures in detail are:

Navels	152 acres
Valencias	1,260 "
Lemons	756 "
Grapefruit	5 "
Apples	46 "
Apricots	270 "
Pears	215 "
Peaches	181 "
Plums	45 "
Walnuts	1,042 "
Almonds	35 "
Figs	10 "
Olives	15 "
Avocados	10 "
Prunes	15 "

REGULATE SALE OF BORAX-POTASH

The department of agriculture has investigated the damage to crops attributed to the use of fertilizer containing high borax-potash, and has traced in important instances this potash to the product of Searles Lake. In order to permit the safe use of this product in future, the department has decided to place such restrictions on the use of potash salts containing borax as will guarantee the use of an application of not more than two pounds of anhydrous borax per acre, and has issued instructions to the producers of potash salts at Searles Lake and to all brokers, fertilizer manufacturers and mixers not to sell potash salts direct to farmers as straight goods when they contain more than five-tenths of one per cent of borax and not to sell mixed fertilizers containing more than two pounds of borax per ton unless the amount of borax contained is plainly shown upon the container.

This regulation is issued to insure that in no case shall a fertilizer application be made by farmers without their knowledge, which would add more than two pounds of borax to the acre. The department feels that such restrictions will make the use of potash salts from Searles Lake as safe under all conditions of agriculture as is the use of nitrate of soda, acid phosphate and other fertilizer constituents.

RENTING BEES

The Western Honey Bee is authority for the statement that fruit growers of the Yakima Valley are renting bees to pollenize their orchards. One cherry grower has contracted for 40 stands for next spring to place in an orchard of six and one-half acres. He is to pay $5 a stand, move the bees to his orchard at the beginning of the blossoming season and return them to the owner at the end of the period. The owner is to have all honey manufactured. It is also stated that many bees have been killed by the unusually late and heavy spraying given to the trees and that much fruit was consequently lost through lack of fertilization.

WHERE RAISINS GO

During the month of June 229,427 pounds of raisins, valued at $24,405, were shipped from the port of San Francisco. Canada took over two-thirds of them at $18,871, while Mexico was a poor second with less than one-thirteenth as much, or only $1,410. The other buyers, in their order of importance, were: Japan, Hong Kong, Peru, Philippines, Dutch East Indies, China, Japanese China, Straits Settlements, Korea, Salvador, Siam, Guatemala, and down the list to a minimum shipment of 61 pounds, valued at $8, to German Oceania.

RU-BER-OID
and
MALTHOID
READY ROOFINGS

Buy Real Protection

Dependability—that's what you want in the roofing that is between the weather and your valuable goods or crops or animals.

Good roofings like Ru-ber-oid and Malthoid resist sun and rain and give dependable protection for many years. That is why good roofing is the cheapest—it lasts long and no expensive repairs or replacing are necessary.

Ru-ber-oid and Malthoid are made of high-quality long-fibre felt, manufactured in our own mill. This felt is saturated and coated with highly waterproof and sun-resisting compositions, prepared in our own refinery. Ru-ber-oid and Malthoid will not rot or dry out, and are highly fire-resistant.

When you buy roofing buy REAL protection.

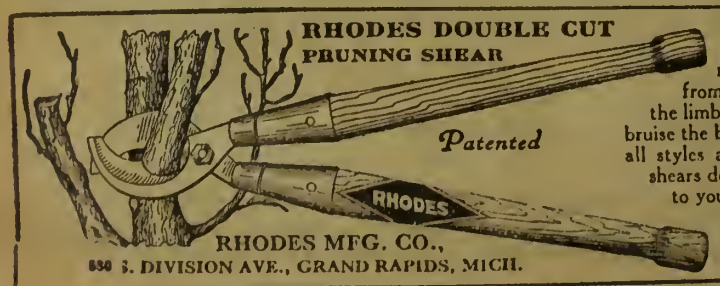
Like ball bearings

The mica in Mica Axle Grease fills up all roughness in spindles and bearings, keeps them cool, slippery and smooth as glass. Then the grease works better and lasts twice as long. No hot boxes. Just like putting ball bearings on your wagon. Ask your dealer. Buy by the pail.

Standard Oil Company (California)



THE only pruner made that cuts from both sides of the limb and does not bruise the bark. Made in all styles and sizes. All shears delivered free to your door. Write for circular and prices.

Questions and Answers

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Keeping Cider Sweet

Please give proportions of soda benzoate to use in order to keep cider sweet, that is, how much should one put in a 50 gallon barrel and at what time?—Subscriber, Acton.

We would refer to answer to similar questions in the Cultivator of August 1 on page 174 and September 6, page 300. Neither of these methods of keeping uses benzoate of soda; in fact, its use is so liable to be harmful that it is not recommended by the department of agriculture. The best sterilizer is heat and sealing the cider in air tight containers. Time of sterilizing differs according to one's taste. If it is wanted perfectly sweet it should be sterilized immediately after crushing. Under present laws it will not be wise to permit any fermentation. The calcium sulphate treatment recomended in the Cultivator of August 16 is to be preferred to the use of benzoate of soda and should be used in the proportions of one-fourth ounce calcium sulphite to one gallon cider. More detailed information may be had by writing Bureau of Chemistry, United States Department of Agriculture, Washington, D. C. Extended investigations have been made into this subject and the results are embodied in a bulletin.

Spraying for Scale and Mealybug

Please tell me what kind of spray or wash to use on an orange tree infested with scale and mealybugs? Fumigating would not be possible because I do not believe the necessary apparatus could be had in this county as citrus fruit is not raised in a commercial way.—Subscriber, Redwood City.

Apply kerosene emulsion, formula for which was given in the Cultivator of August 9, or, perhaps better still, get small parcel of commercial ready-to-use spray either of emulsion, rosin wash or other mixture. For such a small quantity as suggested here it is very probable that the commercial mixture would be preferred.

Black and Brown Scale

Will you tell me what kind of scale my trees are infested with? I am sending a specimen under separate cover. The scale seems to attract the ants in large numbers. Do these ants protect or destroy the scale? I have sprayed twice with kerosene emulsion—Subscriber, Palms.

The twigs sent in were infested with both black and soft brown scale, the black predominating. It is not always easy to tell the difference between these two scales, but the observer who wishes to be sure may look for the letter "H" which is formed on the "back" of the black scale. Sometimes the "H" is very distinct. If it is, then it is certainly not the brown scale. However, both these scales are so nearly alike, and the same method of procedure is necessary to rid the trees of them, that it is not of commercial importance that one should know which variety is which. Kerosene emulsion should have been sufficient to have eradicated the pests if well applied and done in season. To reach these pests spray any time from the present until the first of January. After that date ordinary sprays may not be so effective. We do not know that the ants protect or otherwise deal with scale, but we do know that they are attracted by the honey dew exuded by the scale; also that they do protect and care for the aphis which exude honey dew. In fact, we have heard the aphis called the dairy cows of the ants. If the scale is removed it is probable the ants will also disappear.

California Roads

How many miles of good roads are there in California?—Subscriber, Minnesota.

This question was submitted to the Automobile Club of Southern California and it answers as follows:

"To June 1, there were 6,064 miles of hard surfaced roads in California These figures are as nearly correct as we are able to determine, as there are a few remote counties that we have not been able to check. Los Angeles County alone has 1,208 miles of hard surfaced road. The average cost per mile in this state is in the neighborhood of $18,500 per mile. In the 13 southern counties of Southern California, which is the territory over which this club extends its activities, there are approximately 2,603 miles of paved road, while in the remaining 45 counties of the state, with the exception of a few remote counties we have not heard from, there are 2,253 miles."

WHY OWN AN AUTOMOBILE?

Continued from Page 611

and range of utility. It can be used to carry livestock and will hold a good supply of bulky stuff, such as baled hay, alfalfa or large milk cans.

So popular have trailers become that in California the law requires them to be registered in the same manner as automobiles. An annual fee of $2 per trailer is required and not more than two trailers may be drawn by one vehicle. The rear trailer must display a red tail light at night, so arranged as to illuminate the license number plate.

Professionally built trailers are cheaper in the long stretch. Close attention should be given to the connection with the touring car, since the best regulated of trailers have been known to shake loose from their moorings and remain stranded in mid-road Pneumatic tires justify their additional cost as well as conserving the expensive surface of the highways. Metal tires are noisy and transmit vibration. Vehicles drawing metal tired trailers are limited to a speed of ten miles per hour, and this only provided the spring equipment is adequate.

A trailer which does not "track" correctly will exert terrific side strain on the car drawing it and eventually send the entire outfit to the repair shop. Many who pamper their cars with hours of careful attention are guilty of gross neglect in the care of the trailer. The wheel bearings of the trailer should be given the same attention as those on any machine and the springs lubricated occasionally as well.

Automobiles can no longer be purchased over the counter like bread or cheese; all manufacturers of motor cars are overwhelmed with orders. The farmer or rancher who procrastinates in securing a car should realize that the delay is costing him real money. Utilization of the automobile, supplemented by tractor equipment, will free valuable pasture land for cultivation as well as reduce the acreage required to grow feed for livestock. Likewise in the barn hundreds of cubic feet of storage space will be available for other things than bulky hay and alfalfa feed. "Fodder" for the automobile can be kept in two small tanks, one for oil and the other for gas.

Join the Parade

Start now and ship every skin you handle this season to the greatest fur bonse in the greatest fur market in the world. Abraham Fur Co., St. Louis.

You are about to etart the greatest fur season in the history of the fur trade—you will receive the highest pricee for yonr furs ever known and if you want every dollar coming to you for your ehipments, eend them to the Abraham Fur Co. We have cleaned out all of our old eupply. lock, stock and barrel, and have nothing on hand but money—millione to pay for furs.

TRAPPERS

Write today and get in line with the most euccessful fur institution in the world. When Writing Advertisers, Mention The Cultivator.

Discarding the dollars and cents viewpoint to consider the social aspect of the automobile, we come to perhaps the major point of all benefits to be derived. The automobile is a connecting link between the farm and the educational, cultural and amusement centers of the cities. Most California land is located within several miles of a population center where a school, church or theater, perhaps all three, may be found. With good roads and good lights the trip to town and back or an evening jaunt to the home of a neighbor is keen, invigorating sport.

Lectures, concerts and other broadening influences of city life come into the horizon. Then there are the eagerly anticipated holidays with runs to the beaches or the mountains or "doings" at the county seat. For those who face the problem of keeping the young folks on the farm the automobile is a tremendous asset, often capable in itself of checking the exodus cityward.

When deciding on the car to buy do not be influenced by "bugaboo" rumors concerning certain serious defects in the construction of particular makes. The days of uncertainty are past in the automobile industry. Any car will give you good service if well taken care of, although expense of operation varies with size and weight.

After getting the machine remember that nowadays a man is known by the car he drives. Use polish and elbow grease unsparingly and dust the top frequently. Familiarize yourself with the entire mechanism. Keep continually in mind that oil and grease are cheaper than repairs. Make sure each morning that the tires are up to the pressure specified and the oil reservoir filled to the proper level.

Every state boasts of some particular specialty, but all of them must doff their derbies to California as the realm of gas and rubber. The following figures, recently compiled by the state motor vehicle department, demonstrate also that California farmers are realizing the value of the trailer.

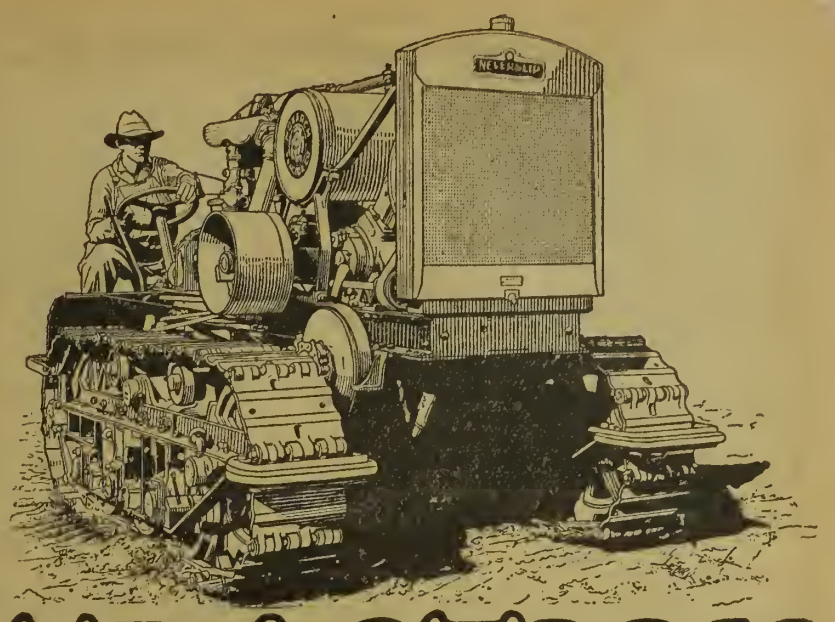
ALAMEDA COW TESTING ASSOCIATION

Clarence V. Castle reports cows which are in the honor class, that is, 40 pounds or better, in the Alameda County Cow Testing Association, for the month ending September 30. The high record cow for the month was in the Hoopman dairy, a grade Holstein, producing 52.90 pounds butter fat. Other record dairies were those of Shinard Lee and F. Stenzel.



TRACTION

Power on a tractor is of little relative value unless it is applied to afford maximum fraction. Traction is what counts. It is the primary reason for a tractor and TRACTION is the outstanding feature of the MONARCH Tractor. It has power—plenty of it—mechanical perfection, strength, ruggedness and, most essential of all, it has maximum traction delivered by means of the endless MONARCH tracks. These tracks enable the

MONARCH Tractor

to get over the ground with a greater grip than a dozen drive wheels. They have an irresistible creep that laughs at hills, grades and loads. In addition, the weight is so distributed that, inch for inch, it is no greater than the weight of an average man's foot. This means that the MONARCH Tractor will not pack the soil.

Where the Grades are Heavy and the Going is Hard

You can use the MONARCH Tractor everywhere. The secret of MONARCH power and success is in the TRACTION principle. Before you buy a tractor you should see the MONARCH 16-9—the logical tractor for the average farm—a combination of power and convenience. The rating is 16 H.P. on the belt pulley and 9 H. P. on the drawbar. Powerful enough to pull from two to three bottoms. It will turn in its own length and work where horses cannot go.

Do not confuse MONARCH Tractors with the so-called "track-laying" types. The track on the MONARCH is made of wear resisting manganese steel. We guarantee to duplicate for MONARCH Tractors *any written warranty* put out by any other responsible tractor manufacturer.

MONARCH Tractors are made in the following sizes:
16-9 H. P., 20-12 H. P. and 30-18 H. P.

Advertise the Farm

CALIFORNIA producers have learned to cooperate and in learning to cooperate have learned to advertise. This has been shown most effectively in a recent number of a large Eastern magazine, five full pages of which, all in colors, were used to advertise California products. Some members of those organizations were doubtless astonished at this advertising campaign, especially when it was considered that those five pages in one issue of the magazine cost more than some of the California's finest and best equipped little ranches. Yet we doubt not this investment in that magazine paid good returns. So collectively we have learned to advertise, but individually there is still a lesson for the farm owner.

Since there are occasions when the livestock breeder or the producer of nursery trees or pure seed may wish to reach readers of the Cultivator, this talk may sound somewhat like advertising this paper, yet it is not that type of advertising to which we are now referring, rather to advertising secured through attracive appearance of the farm, well kept yards about buildings and lawns, attractive signs or bulletin boards located in front of the grounds.

It is not often that the passer-by sees in front of the stock breeders home a neatly painted, well kept sign indicating that it is the home of pure bred beef or dairy animals or draft horses or swine. Yet some of those same breeders carry in a paper like the Cultivator expensive announcements. We would not encourage lessening of advertising in the Cultivator, but we would urge making this advertising more effective by definitely locating in people's minds the site of the farm. Attractiveness is lent to these signs if they also announce the name of the place, such as Riverdale Farm, Wayside Ranch, Oaknoll Herd of Jerseys.

Speaking of livestock advertising the Nebraska Farmer thus mentions a specific instance:

"Most breeders have already learned the value of livestock advertising, especially when sales are held. There are others who have built up a large year-round business through more general advertising. One of the most successful Jersey farms in the East has a truly wonderful array of advertising literature. This farm is in a very picturesque location, and some of the best photographic artists that could be obtained have made pictures of it. Attractive pictures of the stock in pretty surroundings are invariably taken. So far is the photographic work carried on this farm that a prospective customer can request a print of any of the more prominent animals on the place and it will be forwarded to him at once, with important data typewritten on the back.

A story regarding the farm published in an agricultural journal was reprinted for advertising matter. There are booklets that describe all the principal Jersey families on the place. All the information that could be desired is included in some printed matter that the farm has. All of this is in addition to regular advertising carried in the breed and general farm papers. In fact, this printed matter is used simply as a means to follow up the inquiries that are received.

"In Wisconsin there is a breeder who sells practically all his pigs before they are born. He advertises the year round and practically everything is engaged in advance. This breeder thinks it sounds better to say that he is sold out instead of having 200 pigs on hand, but he immediately puts the customer down for delivery a few months ahead. He answers all inquiries the day they are received."

Other good advertising is secured by attractive ranch stationery. The home printer in every town should take pains to put out the most attractive letterheads possible for producers of the community. His work advertises the farmer and the community. Five hundred sheets of paper all printed often costs little more than the same amount purchased in little quantities from time to time at the store.

Rice Binder Working Under Difficulties

RICE BINDER

Herewith is illustration of a rice binder which is giving entire satisfaction under abnormal conditions. It was being tested at the time of taking the photo, operated over water soaked ground. One of the best features is that the tractor travels only over stubble that has already been cut. The work is done directly ahead of the machine and it does not run over a spear of rice. Another advantage is that with the wooden planks, 19 inches wide, bolted to its tracks, the pressure to the square inch is less than four pounds, while on the average rice binder it is 75 pounds to the square inch.

This binder is attached to a Monarch tractor. Manager Walker writes:

"The only changes that we make on the tractor are to put in a 90 inch axle and bore four holes in the front of the frame. The reason for the demand for a machine of this type is that the rice is all grown in checks ranging from one acre to ten or sometimes 15. It is impossible and not practical to try to cross the checks in cutting the crop. In order to save the big loss that there would be by horse binders making the first round inside of the checks, most rice men cut a strip around the edge of each check by hand. You can imagine the time it would take a man to cut a strip eight feet wide around the check with a little handle sickle. He will also thresh out and lose considerable. If this is not done, the horses in going around the first time will tramp down considerable and the binder will run over such an amount that they cannot well afford to stand this loss. On the other hand cutting around the check by hand with labor at the price it is at the present time, eats up considerable of the profit."

PROGRAM OF WORK OF THE CALIFORNIA FARM BUREAU FEDERATION

The Cultivator last week gave report of the convention at Berkeley of the California Farm Bureau Federation. Farm Adviser Hodgson of Los Angeles County this week tells of the special program of work to be taken up by the California bureaus.

Work will be along the following lines: Livestock improvement, irrigation and drainage, cooperative marketing, handling of grain, community improvement, fruit growing problems, and education.

The livestock improvement committee, which will be headed by J. W Schmitz, of Madera, intends to carry on a state wide campaign during the winter months for the use of pure bred sires on the farms of California It is expected that through this campaign California livestock will improve much more rapidly than ever before Boys' pig and calf clubs will also be promoted through this livestock committee.

The irrigation and drainage comtee, under the chairmanship of R. L. Morehead, of Sutter County, will attempt to correlate all of the local irrigation projects now under way in the various counties into a state wide campaign for a greater irrigation area in California. Not only increased irrigation will be encouraged, but a definite campaign for alkali prevention will be inaugurated to combat this serious menace.

The committee on marketing, headed by J. A. Teagarden, of Placer County, is to study the marketing problem and promote livestock auction sales. It will also form a wool pool among the sheep raisers and maintain an inter-county exchange for high class products such as pure seed, etc.

The grain growers department, of which George H. Sawyer is the leader, is to work out a plan for disposal of the grain crop of California This will require looking into the matter of grain standards and pooling together with a study of bulk handling

Fred J. Hart, of Salinas, heads the

STYLEPLUS CLOTHES

Styleplus must be good clothes!

Our policy insures it

Our policy insures it.

Styleplus are America's known-priced clothes. The sleeve ticket, put on by us, tells the price.

Exceptional value at each known price—this is the Styleplus policy that insures your complete satisfaction.

Visit the Styleplus Store near you and notice the splendid fabrics and stylish models. Then make your selection—suit or overcoat. Or both. You will have *good* clothes—stylish clothes—clothes that will give fine service—*guaranteed.*

You want to see and try on your clothes *before* you buy them. So buy them at a *store!*

Buy plenty of clothes this fall. Prices are going up, because of market conditions.

Sold by one leading clothing-merchant in most cities and towns. Write us (Dept. AB) for name of local dealer.

committee on community improvement, which has decided that a campaign for the material improvement of farm homes and rural extension telephones is in order.

The committee on fruit problems, under the chairmanship of Sheridan Baker, considers the two most important problems needing its attention during the coming year are the so-called new "long" system of deciduous pruning and the June drop of citrus. The use of manure and other fertilizers is also to be taken up by them.

The educational committee, of which Volney H. Craig, of San Fernando, is chairman, has under its charge all publicity work for the new organization and will also inaugurate a campaign for improved conditions in rural schools. Included in their publicity work will be an organization paper and assembling and publishing of cost production data.

The following delegates attended the conference: R. L. Morehead, Sutter; E. R. Leedom, Turlock; A. C. Gehringer, Antioch; Geo. H. Sawyer, Waterford; H. B. Woodrough, Harper; J. A. Irving, Placerville; Henry Wheatley, Napa; E. O. Gassoway, Auburn; J. M. Bigger, Stockton; Peter Seith, Palo Cedro; W. H. Walker, Willows; J. W. Schmitz, Madera; J. A. Filcher, Sacramento; L. A. East, Alton; H. A. Hyde, Watsonville; V. H. Craig, San Fernando; G. T. Drinkwater, Lakeside; J. E. Wherrell, Riverside; T. A. Kilkenny, Dixon; J. T. Macomber, Tipton; B. D. Irving, Brawley; C. A. Rinderspacher, Hayward; J. A. Teagarden, Auburn; Geo. Feaver, Fowler: Frank Johnson, Hardwick; C. L. Musgrove, Woodland; F. J. Hart, Salinas; R. B. Peters, San Bernardino; Sheridan Baker, Sonoma; C. L. Sisson, Red Bluff; Prof. B. H. Crocheron, state leader.

HOPS SURVIVE JOHN BARLEYCORN

Hops, after all, are not to die with John Barleycorn. This crop encountered an increasing number of states with laws prohibiting the manufacture and sale of brewed liquors, the national law prohibiting the interstate transportation of such liquors, the war time prohibition, and lastly the amendment to the constitution.

The area devoted to hops declined from 44,700 acres in 1915 to 27,900 acres in 1918 and 26,900 acres in 1919, and the production dropped from 53,000,000 pounds in 1915 to 20,200,000 pounds in 1918. The war, too, reduced hop exports to a low figure. One large producer of hops in California took steps in 1918 to replace the apparently doomed crop with a large business in dehydrating vegetables.

The extremely low price of 12 cents a pound to producers was reached in December, 1916, and the December price of 1918, although 20 cents, was still low. On the contrary, in the autumn of 1919 a market of unprecedented buoyancy was created, mostly by British buyers, who, according to commercial reports, paid very high prices for the new crop and were glad to get old hops. The average price to producers, September 15, reported by the bureau of crop estimates, was 56.6 cents. Nearly all of the crop is raised in New York, Washington, Oregon and California. California hops are now being sold at 60-70 cents.

ANTI-AMERICAN CAMPAIGN

Continued from Page 613

tion, and the Japanese government does not know officially that the 'Gentlemen's Agreement' is being violated. The Times repeats that California has no quarrel with the Japanese government or people, but California insists that the influx of Japanese labor and Japanese picture brides into California must stop."

San Fernando Tribune

"Let us organize and say to the world that there is no room in the San Fernando Valley for the Oriental, and then make good on the declaration."

Paul I. Dougherty, formerly farm adviser in Imperial County, later with the overseas service, has now been chosen as instructor in the animal husbandry division of the University of California.

You Wouldn't Haul Crops

to town on your back and yet you unnecessarily break your back doing a lot of odd chores around the farm such as sawing wood, turning the grindstone, pumping water for the livestock, etc., and let your wife and girls wear themselves out over the wash-tub, churn, and separator. Drudgery of this sort was absolutely necessary on the farm once upon a time—but times have changed.

There is no need to let these little jobs take the joy out of life, because an **International Kerosene Engine** will perform all of these tasks—and a lot more, besides—doing the work much faster and more cheaply, to say nothing of doing it better than it could be done by hand. These engines deliver steady, uniform power—**they never lag**—so any machine that they operate works to the best possible advantage. There are three sizes—1½, 3, and 6-h. p. engines.

The 1½ and 3-h. p. engines are the all-around "chore boys" while the 6-h. p. engine is the dependable "man about the farm". It does work that a dozen hired men couldn't do, such as shelling corn at the rate of from 1,000 to 1,500 bushels a day, baling 15 to 20 tons of hay in a day, grinding feed at the rate of from 5 to 25 bushels an hour, and threshing 20 to 40 bushels of wheat an hour (operating a Sterling thresher).

Shall we mail you a catalogue and tell you where you can see an **International Engine?**

Ripon Holsteins to New Herds

In the combination sale of Holsteins held at Ripon, October 30, consisting of consignments from the herds of C. A. Miller, Ripon, Wm. T. Miller, Ripon, H. A. De Wolf, Ripon, and Gotshall and Magruder, Ripon, 92 head, including an unusually large number of young things, were cashed for $22,150—a general average of $240. Thirty-three head of cows averaged $337, 41 head of heifers ranging in age from four months to 30 months averaged $225 and 17 head of bull calves, only a few of which were over six months old, averaged near $100.

The sale attracted one of the largest crowds of the year and a feature of the auction was the number of dairymen making their initial purchases of pure breds.

Sarcastic Dora of Millbrae, a nine year old cow, with a record of 24.11 lbs. fat, topped the sale at $600. She was purchased by W. J. & B. A. Edwards, Ripon, who were among the heaviest buyers. W. H. Bryan, Patterson, selected 11 head. Burr Farm, Los Angeles, took 10 head of the choicer lots.

The sale was managed by C. L. Hughes of the California Breeders' Sales and Pedigree Company. Col. Ben A. Rhoades of Los Angeles served as auctioneer and Col. George W. Bell, of Tulare, worked the ring. A complete list of sales follows:

Gotshall & Magruder

1. Fidessa Butter Belle, April, 1912, 28.14 lbs.; J. E. Headley, Ripon, $320.
2. Moorland Sadie De Kol Haskins; W. H. Bryan, Patterson, $275.
3. Lockhaven Aaggie Segis, Dec., 1912, 21.62 lbs.; R. Stevens, Stockton, $410.
4. De Kol Princess Belle 2d, Sept., 1913, 23.62 lbs.; J. E. Headley, $335.
5. Karlray It Segis, Oct., 1918; C. A. Miller, Ripon, $360.
6. Karlray Segis Paul, June, 1919; W. H. Bryan, $130.
7. Karlray Bonnie Walker, Aug., 1919; V. J. Reeve, Bethany, $100.

Laurameka, a California Holstein cow, has now become eligible to the select circle of 1000 pound butter fat cows of which there are only three in California and but 35 in the whole world, with a record of 29.899 pounds of milk and 1,061.27 pounds of butter fat produced in one year, or converted to butter, a record of 1,326.59 pounds, according to recently reported tests of the Holstein-Freisian Association. The official portions of the test were supervised by representatives of the University of California.

Laurameka, owned by M. H. Tichenor of Palo Alto, was bred by the Vina Ranch of Stanford University, her record being made at the Palo Alto Stock Farm. She entered the lactation period at the age of seven years and 21 days. Her best 30 day record is 112.114 pounds fat and 3,145.1 pounds milk. Her best seven day is 27.130 pounds fat and 768.5 pounds milk.

DUROC SALE EVENTS

Three big days of Duroc-Jersey bred sow sales are to mark the opening of the year 1920. These public sales rings are to embrace high class stock from three notably fine breeding herds as follows: January 28, Diamond Bar Ranch, Spadra, sale to be held at the ranch; January 29, Winsor Ranch, Bonita, sale to be held in Los Angeles; January 30, Ireland Ranch, Owensmouth, sale to be held at the ranch.

TRAP for Fun and Profit

Make Big MONEY
Prices Higher Than Ever

Stephens' New Trappers' Guide tells you how to trap every kind of fur-bearing animal—Coyotes, Muskrats, Skunks, Wild Cats and all others. It also tells you how to skin them and how to preserve their furs so that they will bring you the most money. It tells you what kind of traps to use, what bait is best, just what season to catch each kind of animal to get the fur in its prime, when it will bring you the highest price.

TRAPS at Factory Prices

Stephens sells traps, bait, smokers, knives and other trappers' supplies at rock bottom prices. Write today for Big, New, Illustrated Trappers' Guide containing Game Laws; Trappers' Supply Catalog, Fur Price List, Shipping Tags—ALL FREE.

The Choice of Governments

The "Caterpillar" Tractor was the only tractor used by the Allies for their heaviest war work—a choice made after severe and prolonged tests.

How the "Caterpillar" Tractor made good in war service is a matter of history—a marvel to the officers and men serving where "Caterpillar" Tractors were used.

This record merely verified what thousands of farmers who had been using the "Caterpillar" already knew—that Holt design, Holt choice of materials and Holt workmanship give the "Caterpillar" Tractor drawbar pull, stamina and dependability almost beyond belief.

Order your "Caterpillar" Tractor now. Send for Catalog 406.

Unsigned communications receive no attention.

Abortion

I have a mare five years old. She lost a colt about six months ago after she had been carrying it about that length of time. I think it was caused by her being kicked by another horse in the corral. Since that time she has been very poor in spite of the fact that she has a very good appetite and gets plenty to eat. She is very slow in her movements and it seems almost impossible for her to travel faster than a walk.—Subscriber, Orland.

The abortion was probably the cause of the loss of health and is causing it to continue. Something may be wrong with the genital organs. If possible have a veterinarian examine her. Part of the afterbirth may have been retained and will have to be removed, or some of the parts may be displaced. Feed her laxative feed. Read the article on "Skin Diseases" in the Cultivator of November 1 on page 607. Also give her the tonic prescribed for that case.

Indigestion

Would like to know what to do for a cow that is bloated on the left side and when thumped it sounds like a drum. Have given her salts and oil but can not see any change. She eats and drinks the same as other cows. She was giving about five gallons of milk but gives very little now. Her droppings are like ground alfalfa. She does not chew her cud and seems to grind her teeth occasionally. — Subscriber, Lodi.

That is one of those stubborn cases of indigestion that needs prompt treatment and that followed up until relief is obtained. You should have called the nearest veterinarian at once. A reply through the Cultivator will probably be too late.

If you were going to treat her with salts you should mix two parts of epsom salts with one part of common salt and give one pound of the mixture about every six hours until the cow was relieved. Or if you used oil you should combine turpentine and aloin with it, using three ounces of turpentine and two drams of aloin to each quart of raw linseed oil and of that mixture give a pint every six hours until relieved. A teaspoon of powdered nux vomica added to each dose of either of the above mixtures would help it to act a little quicker and better. Do not use salts and oil in the same case. Either use one or the other and stick to it. By giving small doses of each you will get no action from either.

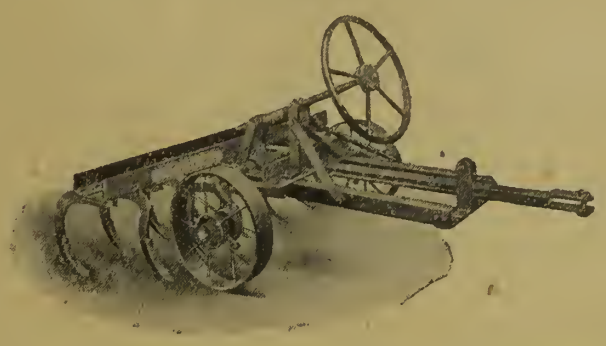
Sometimes it develops that such cases are brought on by a piece of wire or something of that nature being taken with the food, that has penetrated the walls of the stomach. In that case of course medicine is useless, but it is often caused by overeating and the third stomach refusing to act. It takes active work to start such cases. If you ever have another case of this kind you will know what to do.

In nearly every state the production of the late commercial crop of potatoes falls below that of last year. Pennsylvania is a prominent exception, with a gain of 1,030 carloads over last year, and yet that state produces, this year, less than 6 per cent of the total of all states. Maine has a prospect of 24,468 carloads, Minnesota 24,000, Wisconsin 20,800, Michigan 10,275, Colorado 10,030, New York 9,370, Pennsylvania 6,980, and Idaho 6,640 carloads.

Killefer Efficiency

KILLEFER QUALITY

Extra Heavy Orchard Cultivator No. 4



Why scratch the ground when with but little additional cost you can cultivate to a depth that will result in increased crops? Recent reports on this method of cultivation have shown that this can be done.

Our Extra Heavy Orchard Cultivator No. 4 is strongly built of the best high grade steel obtainable and will cultivate to a depth of eight inches, aerating the soil and breaking up any plow sole which may have formed, allowing the water to penetrate the ground instead of running off at the end of the furrow.

This Cultivator is built for use behind the medium-sized tractors; we also make this same cultivator in a lighter weight for the smaller tractors.

Write for booklet on Deep Tillage vs. Old Methods and see what has been accomplished by progressive, up-to-date ranchers who are using our implements.

Insist upon buying a "Killefer" and beware of imitations; look for our trade mark KQ on each implement. Write today for catalogue and price list.

by the purchase of an inferior breeding animal. We have some excellent young Duroc-Jersey boars that we will sell reasonable and will do you a lot of good.

RANCHO DEL SUR, Donald H. Graham, Lancaster, Cal.

Swine Exhibit at Los Angeles Show

By B. S. Bennett

Generally speaking, the show of swine was the outstanding feature of the Los Angeles Livestock Show. At least two breeds, the Duroc-Jerseys and the Hampshires, staged shows that were conceded to be the superior of any held in the state. The Poland China classes were light. Throughout the show the fact was made plain that Southern California swine breeders have declared for the "big type," and they had entries to prove that when it comes to size they have the equal of any. Many of the champions and class winners were declared good enough to be at home in the best shows.

The judging was done by recognized authorities and was instructive as well as satisfactory.

The Duroc-Jerseys

That the exhibit of Duroc-Jerseys was the largest and highest class of any show ever held on the Pacific Coast was the opinion of both the exhibitors and those at the ring side interested in this breed of swine. This breed of swine has made rapid progress the past year, a number of good herds having been established and foundation animals secured from some of the best eastern herds.

The Pathfinder bred boar, Ace of Pathfinders, was first senior yearling and later made senior and grand champion. Masculine in appearance, he stands on extremely large bone, has a high arched back and carries a deep, well set ham.

The Elliott-Brant entry, Mary Rose King, was first junior yearling boar and reserve senior champion. The senior boar pig class brought out the two outstanding animals, Great Orion Sensation Jr. from the Falfadale herd and Big Model shown by Conejo Ranch. These two young boars would do credit to the breed at any of our large shows as both are outstanding individuals. The Falfadale entry was awarded first place and later made reserve grand champion. The aged sow class brought out the undefeated Model Defender Lady exhibited by Winsor Ranch, that was easily first in class, senior and grand champion. This sow has now been shown for three years and as yet remains undefeated, and in the opinion of the judge is one of the really great sows of the breed.

One of the hottest contests of the show was made by the 16 junior yearling sows, and a number of high class animals were unable to get in the money. First in this class went to the Grand Model sow shown by Falfadale Farm, with the Conejo Ranch entry, Wonder's Belle a close second. Diamond Bar Ranch was easily first in the senior sow pig class with Pathfinder's Very Best, a gilt that would be a strong contender in any show, and was later made reserve grand champion. E. J. Barker of Thornton, Indiana, judged to the satisfaction of both the exhibitors and ring side. The awards follow:

Exhibitors: California George Junior Republic, Chino; Conejo Ranch, Newbury Park; Mrs. F. M. Connor, Pasadena; Michael Creamer, Los Angeles; Diamond Bar Ranch, Spadra; Elliott-Brant Rancho, Owensmouth; Falfadale Farm, Perris; Roy E. Fisher, Lincoln, Nebraska; Donald H. Graham, Lancaster; Hewitt Bros., Van Nuys; L. Leest, Van Nuys; E. F. Meyers, Lankershim; W. Moore, San Diego; E. Avery Newton, Los Angeles; C. T. Thompson, Bishop; J. E. Thorp, Lockeford; University of California, Davis; Winsor Ranch, Bonita.

Aged boar—1, Fisher on Critic Perfection; 2, Diamond Bar on California Great Wonder; 3, Winsor on Winsor's Giant Orion; 4, Creamer on Ireland's Orion Defender; 5, Thompson on Thompson's Pilot Defender. Senior yearling—1, Diamond Bar on Ace of Pathfinders; 2, Winsor on Model Defender 1st; 3, Winsor on Golden Defender; 4, Fisher on Moderows Top; 5, Conejo on Modern Lad. Get of sire—1, Diamond Bar; 2, Conejo; 3, Diamond Bar. Produce of dam—1, Conejo; 2, Conejo; 3, Thorp. Barrow—1, U. of C.; 2, Meyers; 3, Thompson. Pen three barrows—1, Meyers; 2, Thompson; 3, Thompson.

Poland Chinas

The Poland China show this year in no way came up to that of previous years. The lack of entries is to be regretted in view of the rapid progress this breed has made in the state the past few years. M. Bassett and Son of Hanford, who can always be counted on, had one or more entries in nearly all the classes, while the

SANTA ANITA RANCHO

Anoakia Breeding Farm

Arabian-Thoroughbreds

Out of our choicest thoroughbred mares and sired by our famous imported stallion Ibn Mahruss we are offering some splendid two year olds. Also some especially desirable young saddle stock sired by Ibn Mahruss, world renowned Arabian desert stallion and Don Castano, five gaited saddle stallion, winner in many prominent shows.

Mammoth Jacks

We have for sale a number of two and three year old jacks, big, growthy fellows of exceptional breeding and quality.

Poland China and Berkshire Boars

Sired by the World's Fair winners, BANKER'S BOY and KINTYRE LAIRD, and by others of our herd boars of equal breeding.

Holsteins and The Milk Check

The size of your check depends less upon the size of your herd than upon the size of your cows. Get big, healthy, pure bred cows with the ability to convert feed into milk at a profit.

Wherever dairying is on a prosperous footing, that's the home of the Holstein cattle. Besides being the leading dairy breed, they bring top prices when beefed. They breed regularly, and the calves are easily reared.

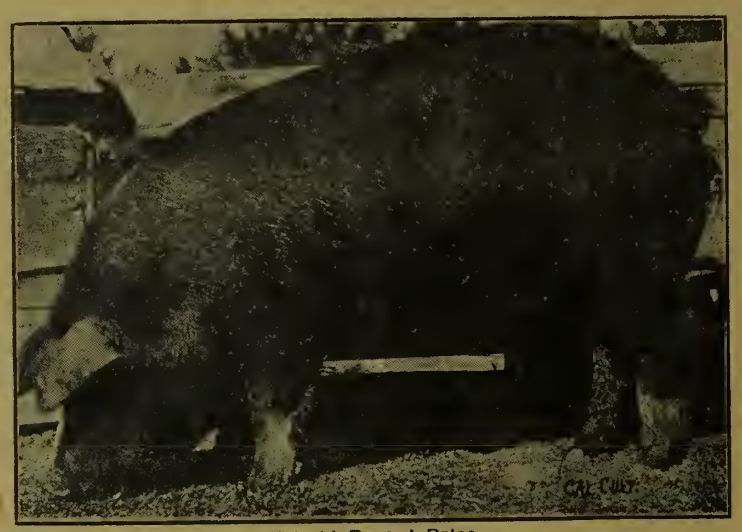
Berkshires

Seven breeders exhibited Berkshires, and while numerically larger



World Record Price

Big Kate 4th, by Rossmead Bob, sold by Fred D. Ross in Kings County Poland China Breeders' Association Sale in Hanford, October 11, for $3,150 to M. Bassett.

shows have been held it was the universal opinion of the breeders that a higher class of animals had never been exhibited on the coast. In commenting on the show Judge Barker said that a number of the animals shown would have won at five of the larger eastern state fairs including the National Swine Show. Probably the outstanding animal of the show was Castleview Premier Belle, shown by J. Francis O'Connor, Santa Rosa, that was first senior sow pig, junior champion and later made grand champion. The judge in awarding her the grand championship stated that she was an outstanding animal and was by far the best he had seen this year. However the A. B. Humphrey entry, the junior yearling sow Emblem's Escalon Belle, was a strong competitor for the highest honors and was made reserve grand champion. A. B. Humphrey also won grand champion boar on Grape Wild Emblem and reserve grand champion on the senior boar pig, Escalon Type, a young boar of remarkable type and individuality.

F. L. Hall, Perris, won first senior yearling boar on Rose Crest Rival and made a very creditable showing in a number of other classes. The Italian Vineyards, making their first show, won reserve senior champion boar and a number of other prizes.

The O'Connor entry, Castleview Rival Duchess, was first junior sow pig and reserve junior champion. The Western Berkshire Congress offered special prizes for the best barrow farrowed after March 1, 1919. Humphrey was first; O'Connor, second; University of California, third; Humphrey, fourth and fifth. E. J. Barker of Thorntown, Indiana, did an artistic job at rating the various classes and his remarks as to why he placed certain animals as he did were appreciated by those watching the judging.

The awards were as follows:

Berkshires

Exhibitors: Mrs. F. M. Connor, Pasadena; F. L. Hall, Perris; A. B. Humphrey, Escalon; Italian Vineyard Co., Guasti; J. Francis O'Connor, Santa Rosa; University of California, Davis; Mrs. A. B. Walters, Perris.

Aged boar—1, Humphrey on Grape Wild Emblem; 2, Humphrey on GWE Leader. Senior yearling—1, Hall on Rose Crest Rival 3d. Junior yearling—1, Italian Vineyard on Choice Goods 10th; 2, Hall on Rose Crest Rival 6th. Senior pig—1, Humphrey on Escalon Type; 2, O'Connor on Rival's Leader 2nd; 3, Humphrey on Escalon Type 2nd; 4, Hall on Rose Crest Rival Laurel 4th; 5, Hall on Rose Crest Rival 7th. Junior pig—1, Humphrey on Grape Wild May Star; 2, Humphrey on Grape Wild May Star 2nd; 3, O'Connor on Castle View Rival Duke; 4, Italian Vineyard on Lee's Natomas; 5, Connor on Bellmore the Chief.

HAMPSHIRES AT LOS ANGELES

By T. J. Hitte

With seven excellent herds in competition, the Hampshire swine exhibition at the Los Angeles Livestock Show flung wide its doors to the visiting public on Tuesday, the second day of the show. C. R. Doty, Charleston, Illinois, placed the awards quite to the satisfaction of all concerned.

The event proved itself far superior in point of number and quality to any of its predecessors on the coast. One of the pleasing features of the show was the very excellent exhibit made by Roy E. Fisher, of Lincoln, Nebraska.

A few of the more salient features of the show might be summed up as follows: The grand champion boar, Harvey's Choice is to be considered the pacemaker in size, type and completeness of fitting for the show ring; Fisher's great sow Flora S., was the outstanding senior yearling of the show; the five junior yearling sows shown by the Conejo Ranch were literally in a class all their own—they swept aside all competition. It was a conceded point by prominent showmen that no such lineup of high class individuals had yet been met in any show ring from a single herd. Four of these were of one litter—the get of the noted boar, Young Senator; the

"That's Relief for My Rheumatic Aches"

SLOAN'S LINIMENT is an effective counter-irritant that *penetrates* to the affected part, *without rubbing*, scatters the congestion, and promotes a *warm, comfortable relief.* Try it when your "bones ache" and you feel you "can hardly stand up any longer."

For more than 38 years Sloan's Liniment has been used by the families of the nation in quickly relieving *rheumatic aches, lumbago, neuralgia, sciatica, lame, sore, strained muscles, bruises* and *other pains* and *sprains.*

Put up in convenient bottles in three sizes—the larger the bottle the greater the economy. 35c., 70c., $1.40

Sloan's Liniment Keep it handy

They Pay for Both

If your steer when he goes to market weighs 300 lbs. more than the average, you get, at current prices, about $40 to $50 for this extra weight. If he has quality, the result of good breeding, you get an additional premium.

That's where Shorthorns have an advantage. They combine extra weight and quality.

It pays to grow Shorthorn beef.

reserve grand champion sow Wavelet from the Gilbert herd, now raising eight fine pigs, was one of a trio of aged sows fit to feature any herd of tops; it was a case of father and son alike in the limelight when Lookout Cherokee, last year's grand champion, now at head of the Denker herd, surrendered grand championship honors to his son Harvey's Choice. A single entry by I. F. Stone won first place in junior sow pig class and junior championship; aside from having a string of ribbons in his own belt, F. A. Langdon looked on complacently as honors were bestowed right and left, many of them going to off-shoots from the old pioneer herd.

Following are the awards:

Hampshires

Exhibitors: L. A. Denker, Saugus; Roy E. Fisher, Lincoln, Nebraska; C. J. Gilbert, Lancaster; Gordon & Langdon, Perris; Fairbanks Ranch, Redlands; Conejo Ranch, Newbury Park; Geo. I. Lytle, Perris; I. F. Stone, Perris.

Aged boar—1, Fairbanks on Harvey's Choice; 2, Denker on Lookout Cherokee; 3, Conejo on Challenger; 4, Gilbert on Harvester Again; 5, Denker on Simple Simon. Senior yearling — 1, Conejo on Liberty. Junior yearling—1, Fisher; 2, Conejo on Conejo Prince; 3, Denker on Sasin; 4, Gilbert on Quality Allen 2d; 5, Gilbert on True Allen. Senior pig—1, Denker on Chong; 2, Gordon & Langdon on Honest Lad; 3, Fisher; 4, Fairbanks on Golden Lad. Junior pig—1, Denker on Director Junior Pride; 2, Gilbert on Chief Harvester; 3, Gordon & Langdon on Jimmie Boy; 4, Denker on Jiggs; 5, Denker on Little Son.

Aged sow—1, Gilbert on Wavelet; 2, Gilbert on Mary Pickford; 3, Fisher; 4, Gordon & Langdon on Fern; 5, Gilbert on Leading Wave 3d. Senior yearling—1, Fisher on Flora S; 2, Denker on Dearie; 3, Conejo on Choice Maid; 4, Denker on Banzareta Giri; 5, Gordon & Langdon on Patience. Junior yearling—1, Conejo on Florine 2d; 3, Conejo on Florine 3d; 3, Conejo on Florine 4th; 4, Conejo on Florine 5th; 5, Conejo on Good Finish 2d. Senior pig—1, Fisher; 2, Conejo on Daisy C.; 3, Denker on Rose Junko; 4, Conejo on Miss Tipton; 5, Rose Tipton. Junior pig—1, Liano Vista Ranch on Mother's Choice; 2, Denker on Amena; 3, Fairbanks on Francis B.; 4, Denker on Mandy Lou; 5, Gilbert on Mary Again.

Senior champion boar—Harvey's Choice; reserve, Liberty. Junior champion boar—Chong; reserve, Director Junior Pride. Senior champion sow—Florine 2nd; reserve, Wavelet. Junior champion sow—Mother's Choice; reserve, Fisher's sow. Grand champion boar—Harvey's Choice; reserve, Chong. Grand champion sow—Florine 2d; reserve, Mother's Choice.

Aged herd—1, Conejo; 2, Fisher; 3, Gilbert; 4, Fairbanks. Young herd—Denker; 2, Fisher; 3, Gilbert; 4, Gordon & Langdon. Herd bred by exhibitor—1, Gilbert; 2, Denker; 3, Gordon & Langdon; 4, Fairbanks. Get of sire—1, Conejo; 2, Fisher; 3, Gilbert. Produce of dam—1, Conejo; 2, Gilbert; 3, Denker. Barrow—1, Denker; 2, Fisher; 3, Conejo. Pen three barrows—1, Gordon & Langdon; 2, Denker.

SERIOUS FIRE LOSS

A great loss has been suffered by A. W. Morris & Sons, Woodland, because of the burning of the big barn and four silos which had been recently filled with sufficient feed to carry the great dairy herd until other feeds could be grown. The loss is far greater than the invoice could show because it will compel the sale of a great number of choicest cows from the dairy. In fact, we believe the date of December 18 and 19 has already been chosen at which more than 125 choice cows and heifers will be offered.

VOCATIONAL REHABILITATION

The Vocational Rehabilitation Law was amended by Congress on July 11. Under the law as it now stands the Federal Board for Vocational Education, the agency charged with its administration, is not a free lance, as apparently many would have it be, but must work within the limits of the law. It may be interesting to note some of the duties of the Board in its dealings with disabled soldiers. The Federal Board can: Provide training for men whose disabilities due to service prohibit their return to the old jobs. It can provide maintenance for such men while in training. It can provide allowances for families of men in training under Section 2 of the Act; provide free tuition for men whose disabilities do not constitute a vocational handicap but who desire training for improvement; certify disabled men who are otherwise eligible for civil service positions; provide equipment—as books, tools, etc., for men in training.

Breeding is the Basis for Performance

By Geo. H. Dacy, U. S. O. A.

WHY do some lots of cattle top the market while others sell at low prices? Why are some consumers willing to pay 60 cents a pound for prime beefsteak while they would reject from their table inferior steak at half the price? Why is it that some feeders finish their cattle or other animals more rapidly and economically than their associates?

Usually because "blood will tell." That is, the animals of the better breeding always achieve the more creditable performances, be it in the show ring, at the fair, in the feed lot, on the range, or at the butcher's block. Purebred aristocracy is not nearly extensive enough in the United States and with a view of extending the kith and kin of the first families widely over the country, the United States department of agriculture is launching its drive for better live stock, which was inaugurated October 1.

Purebreds for Profits

Purebred livestock is not the results of foible and fancy of the rich, for the leading foundation families of the various breeds, for the most part, have been produced and developed by practical farmers who farmed for a living in either the Old or New World. For example, Hugh Watson, the founder of the Aberdeen Angus, was a tenant farmer; Charles and Robert Collings, who sponsored the Shorthorn breed, were English countrymen of medium finances, while the Tomkins and the Hovers, who were the fosterers of the Whiteface in Herefordshire, England, were merely working to produce beef animals of superior type which would fatten more quickly and cheaper than their predecessors. In a word, purebred live stock from hogs, cattle, sheep, horses and dairy cows to goats and poultry, have all been developed for specific purposes, which are intimately associated with the stock farmer's needs and requirements.

Uncle Sam's big drive for better live stock similarly is a campaign to provide for direct and urgent needs. Farmers with surplus feed should desire live stock of the best type which will most profitably and economically convert these grain and forage surpluses into meat, milk, wool, mohair, and eggs. Eliminating the scrub and mongrel animal, live stock of "no account" family or breeding is one of the greatest improvement steps which possibly could be undertaken by the live stock breeding and raising fraternity of this country. Uncle Sam is enthusiastically behind the project and it remains for farmers interested in stock raising throughout the country, not only to boost for better stock, but also to buy and use farm animals of approved type and breeding, in order that our present live stock population, heterogeneous, harum-scarum, and topsy-turvy as it is, may be replaced by superior animals of type and breeding best fitted to supply the market and most suitable to consume profitably the surplus crops of the American farmer.

Why Good Cattle Pay

Just to illustrate that it is about as easy to discount the benefits of good blood in live stock breeding as it is to try to dry up the ocean with a sponge, here are some figures concerning the butcher standards of a good and a medium steer. In the case of a good steer the loin cuts, which are high priced, constitute 16¾ per cent by weight, as compared with 15½ per cent in a medium steer. The rib cuts compose 9¾ per cent in the better class of steer and only 7¾, per cent in the medium animals. The round, which is a medium priced cut, constitutes 21 per cent in a good steer and 26½ per cent in a medium steer, while the chuck, a low priced cut, composes 24 per cent of the good steer, and 27¾ per cent of the medium steer. The miscellaneous cuts in a good steer aggregate 13 per cent and only 11 per cent in the medium steer. These figures indicate that the good steer carries a greater percentage of the high priced cuts and a lower percentage of the medium priced and cheap cuts than does the medium steer, although the animals may be fed similar rations. This divergence in meat makeup at market time must be attributed to breeding.

Two shipments of steers which recently arrived on one of the large central markets also are of interest in disclosing the breeding facts. One lot of good steers weighed, on an average, 1,186 pounds and sold at $15.30 a hundredweight, their dressing percentage averaging 61 per cent. These steers carried 6¾ per cent of inside fat while their cost per pound, dressed and ready for sale to the consumer, was 22½ cents. The medium lot of steers averaged in weight 963 pounds and sold at $15.30. These cattle dressed 54 per cent, carried four per cent of inside fat, and cost 22 cents a pound when dressed and ready for consumption. Subsequently the meat from the good steers sold for one cent a pound more than that from the medium steers, which resulted in an increased profit for the butcher of approximately half a cent a pound, despite the fact that the good steers cost originally twe cents a pound more than the medium steers. Furthermore, the inside fat was worth considerably more in the good steers than it was in their lower quality mates. The well bred lot of cattle sold for an average of $181.46 apiece, while the poorer steers brought only $128.08 an animal, a difference of $53.38 a head in favor of the better bred cattle.

Every Farmer's Opportunity

There is no possible reason why farmers and stockmen should waste their time and tie up and jeopardize their capital in the purchase and feeding of inferior stock. The supremacy of the better bred animals is practically infallible. They, other conditions being equal, will yield dependable profits which are as certain as the coming of day after a night of gloom. It does not take much capital for any farmer, be he the owner of few head of stock or possessor of extensive flocks and herds, to begin improvement work to better his live stock resources. All that is necessary is that he purchase and use pure bred sires in the grading up and betterment of the progeny.

HAMPSHIRE ORGANIZATION

The California Hampshire Swine met at Exposition Park, Los Angeles, on Thursday, October 23.

An important feature of this meeting was the taking of preliminary steps to incorporate. Thirty directors are to be named and a branch recording office established in Los Angeles for the all around convenience of Pacific Coast patrons. This office is to be in charge of Secretary C. J. Gilbert at 428 Bradbury Building.

A FINE BROOD

George A. Patten, of Tomales, Marin County, sends photos of a fine bunch of Berkshires, photos taken at five weeks, the shotes weighing 2[illegible] pounds each. The litter is the first of a one year old sow and makes a most attractive looking bunch. We doubt not Mr. Patten's Berks will be heard from in some late state fair.

RYE GOES DOWN

Crop prices from Washington indicate the price of all grains in California except rye are higher than those of last year, the drop being 21 cents a bushel. Corn, wheat, oats and barley average two and one-half cents a bushel over 1918 prices.

The U. S. Civil Service announces competitive examination for dairy manufacturing specialist and for animal husbandman to take place in the near futuro. The animal husbandman commands $1800 to $2000 annual salary while the manufacturing specialist calls for $1800 to $2700 annual salary. Apply for form 2118, Secretary United States Civil Service Commission Washington, D. C.

Live Stock News Notes

LIVESTOCK SALE CALENDAR

Holstein Cattle

November 25. Registered Holsteins, California Breeders Sales and Pedigree Company, Tulare.
November 10. Diablo Stock Farm, dispersal, San Francisco.

Duroc-Jersey Swine

November 11. W. D. Hollingshead & Son, Orland.

Poland China Swine

November 19. Fresno County Poland China Breeders' Association, Fresno.

E. D. Barry, Jr., of Todos Santos Ranch writes: "King Hengerveld Honriette, the senior four year old Holstein cow that I purchased from A. W. Morris and Sons at the last Guaranty Sale at Sacramento, has just completed her eight months after calving test. This cow came from Woodland, September 17 and only had 14 days here before starting this test. Her seven day record at time of freshening was 684 pounds milk and 32.24 pounds butter. The Cultivator of April 19, 1919, has a full page cut of King Hengerveld Honriette on the front cover."

The Fresno County Poland China Breeders Association announces a public sale to be held on the Fresno fair grounds, Wednesday, November 19. The sale will consist of bred sows and gilts, open gilts and boars. The first sale of the association was held last August and was in every way entirely successful. Walter C. Ficklin, secretary, states that it is their intention to make this sale a better offering than the first. The sale will be made up of animals of various ages and sex that every one interested in Poland Chinas may find what he wants.

The reserve grand champion Jersey cow and the reserve junior champion heifer calf at the Los Angeles Livestock Show has been sold by Grant A. Brown, of El Monte, to J. E. Thorp, Lockeford.

R. K. Walker, manager of Winsor Ranch, breeders of Duroc-Jersey swine, announces a public sale to be held in Los Angeles the last week in January. The sale will be made up of bred sows and gilts by such noted boars as Great Sensation, Great Orion Sensation, Orion Sensation, Great Model, Great Wonder I Am and Orion Fancy King. They will be bred to the herd boars now maintained on Winsor Ranch, including Great Sensation III and Winsor's Giant Orion. Mr. Walker states that Winsor's Giant Orion is not only the largest Duroc-Jersey boar on the coast, but his get are true Duroc-Jersey type, grow big and are in heavy demand. This sale will be one of a series planned by Southern California breeders.

During the Los Angeles Livestock Show the Hampshire swine breeders met and organized the California Hampshire Swine Breeders Association. F. V. Gordon, of Los Angeles, was elected president; Francis T. Underhill, Santa Barbara, vice president, and C. J. Gilbert, Los Angeles, secretary. The association will be incorporated in this state and all animals will be recorded with the local secretary, duplicates being sent to the home office of Hampshire Recording Association, Peoria, Illinois. It is thought this will facilitate the recording and transfer of animals sold by California breeders and will save considerable time.

Donald H. Graham, Lancaster, has recently sold a fall Duroc boar by Orion's King, Gano, junior champion at the 1918 Los Angeles Livestock Show, to Fulger and Purkis, Santa Maria.

Castleview Ranch, Santa Rosa, sold the prize winning Berkshire sow, Wilsonia Laurel Villa, bred to their senior herd boar, Mayfield Rookwood, to the Italian Vineyard Co., Guasti. They also sold to Ernest Wickenden, Sisquoc, the second prize senior boar pig at the Los Angeles Livestock Show.

The Duroc-Jersey breeders of Southern California held a meeting and banquet at the Los Angeles Athletic Club Tuesday evening, October 21, to which were invited visiting breeders and the agricultural press. There was a general discussion of Duroc-Jersey affairs including general breed promotion. It was decided that instead of offering special prizes at the fairs this money should be spent for publicity for the breed.

D. J. Bastanchury, of La Habra, entertained at dinner Wednesday evening, October 22, the visiting Berkshire breeders at the Los Angeles Show. Mr. Bastanchury, besides being an orange and lemon grower, is an enthusiastic Berkshire breeder and has recently added a number of good sows to his herd. After the dinner had been served, means and methods for promoting Berkshires in Southern Cali-

Pure Hawaiian Cane Molasses

Pork Production

By actual test will increase pork production five-tenths pounds daily over a barley and tankage feed, yet it sells for less than half the price.

Milk Production

One of our customers writes: "We are out of molasses and our cows are falling off in their milk badly, hence we would appreciate immediate shipment. Kindly ship us two tons more in addition."

We supply it in barrels or tank cars for shipment anywhere.

W. H. Young Company

Holbrook Bldg. San Francisco

Mossdale Farm

JERSEY CATTLE DUROC-JERSEY SWINE

We believe that the test of a sire lies in his ability to sire uniform, prize winning offspring, and we are proud of the record of Mossdale sires.

Jerseys---

Our herd bull, JOLLY SENATOR RALEIGH, was never defeated in class as a yearling or as a two-year-old and this year he was grand champion, as a three-year-old, at the California State Fair, the Kings County Fair and the Fresno Fair. And at each of those shows his get won the get of sire class.

Duroc-Jerseys---

The record of Mossdale Durocs at recent fairs is proof of their merit. Freddy You'll Do, our herd boar, sired the winning get of sire group at the above fairs.

We can furnish young things of either breed at prices that are attractive. Write us your wants.

See Mossdale Exhibits at Los Angeles and San Francisco

Our Second Big, Successful Poland China Sale

Fresno, Wednesday, November, 19th, 1919

Here's the blood you can buy in this sale---the 9 greatest the breed contains either East or West

Big Bob Wonder, Giant Jones, Giant Bob, Orange Boy, Evolution, King's Big Bone Leader, Model Fellow, King's Big Bone, Giant Buster, Big Orphan, Hather's Big Bob, President; 50 bred sows and gilts, open gilts for spring litters and young service boars. Twenty breeders are consigning to this sale and every animal has been carefully selected with the view of making this, our second sale, one long to be remembered as to quality and breeding. Sale will be held on Fresno Fair Grounds and will start at 12 M. Lunch served at 11 A. M.

Geo. W. Bell, Tulare, will be the Auctioneer. Write for Catalog to

Alfred Buckland, Pres. W. C. Ficklin, R. A, Box 189, Fresno, Sec'y

REMEMBER THE DATE AND COME

Cow HEALTH is as Important as Good Feeding

When a cow's milk yield falls off, it is more likely to be a question of health than of food. Over-feeding will only make matters worse. Milk cows are subject to impairment of digestive and genital organs and the milk production is immediately reduced.

These vital organs can be toned up and strengthened by feeding KOW-KURE, the great cow medicine. This remedy is also used in treating such ailments as Abortion, Barrenness, Retained Afterbirth, Scouring, Bunches and Milk Fever. The best dairymen keep it constantly on hand. Sold by feed dealers and druggists; 60c and $1.20.

Send for valuable free treatise on cow diseases, "THE HOME COW DOCTOR".

Dairy Association Co.,
Lyndonville, Vt.

KOW-KURE

Service Auto Equipment Corporation
941 Service Bldg., Kansas City, Mo.

Roy Wood, of Chandler, Arizona, received $7,252 net from the grain on a 32-acre farm.

fornia were discussed. A local association was formed as a branch of the Western Berkshire Congress, and it was decided to hold a public sale of bred sows some time early in the coming year. Geo. A. Stingle, El Monte, was elected secretary of the local association.

Leest & Mounier, Van Nuys, have bought from the Roy E. Fisher herd of Durocs, Lincoln, Nehraska, the fine young brood sow, Queen of the Path, by Pathfinder's Pride, for $300. She is hred to Sensation Wonder for January iitter.

C. T. Thompson, Bishop, reports the saie of six gilts and two young hoars, while at Los Angeies Livestock Show, for $1500. These were the get of iast year's grand champion Duroc boar, Thompson's Pilot Defender. Six gilts and one hoar went to Fugler & Purkis, Guadalupe; one boar and two weanlings to Clyde Allen Whittier.

Dr. E. Avery Newton, Los Angeles, (ranch at Laukershim), has purchased from the F. C. Fairhanks Ranch, Redlands, the young prize winning Hampshire boar, Golden Lad. This young hoar was sired hy the grand champion boar, Harvey's Choice, and out of a Goldmine sow.

J. C. Craig has a fine litter of Durocs at his Owensmouth Ranch out of his 16 months daughter of Great Wonder I Am, the largest hoar of the breed. These pigs are sired hy Pathfinder's Likeness, and are a fine prospect for 1920.

J. C. Campbeli at Earlimart owns a good herd of Hampshires with the young hoar Senator Pickford from the C. J. Gilbert herd at head of herd.

Frank Reed Sanders, of Phoenix, Arizona, while at the Los Angeles Livestock Show, closed out his foundation herd of Dutch Belted cattle to J. M. Heaton, Las Vegas, Nevada.

That the Diamond Bar Durocs, owned at the big ranch at Spadra, constitute an aggregation of show and hreeding animals somewhat out of the ordinary was amply demonstrated at the big Los Angeles swine show. The great senior yearling boar, Ace or Pathfinders, figured as first in class, senior champion and grand champion boar of the show. Other winnings brought the total up to 19 rihbons The herd will he seen at San Francisco the coming week.

The one outstanding feature of the Duroc show at Los Angeles was again to be noted in the walk-away with grand championship honors in the female section hy the old show and brood sow Model Defender Lady of the Winsor Ranch herd at Bonita. As matters stand today Model Defender Lady hids fair to eclipse all show records of the hreed. But her record as a brood sow is equally as hrilliant.

W. T. Hollingshead & Sons of Orland are going to hold a hoar and gilt sale of 30 head November 11. It is the first saie of its kind in Northern California among Duroc hreeders Breeders and heginners will find it an opportunity to attend this sale as this herd is one of the foremost herds in Northern Caiifornia and contains some of the most popular hlood lines of today.

One of the most important Shorthorn transactions of the year was closed last week when the Edinger-Johnston Company, Hood, purchased from the Caledonia Farms, West Sacramento, 30 head of choicely bred cows, nearly all of which had heifer calves at foot and were hred back to the famous bulls at the head of the Caledonia herd. The Edinger-Johnston Company were among the heaviest purchasers at the H. M. Eiberg sale at Woodland recently and it is their intention to estahlish one of the best herds of the Sacramento Valiey

V. F. Dolcini, proprietor of June Acres Farm, Davis, has just received a Duroc-Jersey boar that is the litter mate to the Iowa junior champion. This hoar is sired hy Mahaska Wonder, the hoar that is making such a good record in the Waltmeyer herd in Iowa.

F. W. Ellehy, Jersey breeder of Modesto, reports the sale of the yearling bull, Captain John Polo, son of King Polo of Bleakhouse, and Moravias Gussie, a high producing cow now on official test, to Prof. V. C. Bryant of the University of California to head the dairy herd which Prof Bryant is estahlishing on his ranch near Escalon; aiso the sale of Wildwood Critic, a four year old Elden Fern Lad bull, to Leedon & Carpenter who are estahlishing a dairy near Modesto.

A. E. Harvey, manager of the Fairbanks Ranch Hampshires at Rediands, is setting a high mark in Hampshire breeding operations. The great herd boar Harvey's Choice, winner of grand championship honors at the Los Angeles show, is a point in evidence. Mr. Harvey has a lineup of great brood sows at the ranch, such as Velvet, Pansey II, and Calla, not to mention many others. No less an authority than F. A. Langdon puts Velvet down as one of the leading brood and show sows of the breed. The young stock at Fairhank's Ranch carries the extreme of bone, stretch, and ail that goes to make Hampshire type and character.

Up in Bouquet Canyon, 18 miles north of Saugus, is the L. A. Denker Hampshire Ranch. Surrounded by green alfalfa fields here is one of the ideal breeding grounds for the production of high class pure hred swine That Mr. Denker is making the most of his opportunities is evidenced by the string of 20 ribbons captured at the recent hig show at Los Angeles where the Hampshires were one of the leading attractions. The noted sire Lookout Cherokee, second in class at Los Angeles, has his home here. The first prize senior hoar Chong by Director, dam Little Mesa, was bred and shown hy Denker, as was also the first prize Director Jr. Pride in junior pig class. Little Mesa was left at ranch with fine litter of Lookout Cherokees.

The Fresno County Poland China Breeders' Association will hold their second public sale on the grounds of the Fresno District Fair Association Wednesday, November 19. Fifty animals have been seiected from the herds of 20 breeders and will consist of bred sows, bred and open gilts and

MAKES HENS LAY — LACTEIN — MAKES HOGS PAY

CONDENSED BUTTERMILK
FOR HOGS AND POULTRY

BUTTERMILK IS NATURE'S FOOD AND TONIC

Lactein is pure buttermilk as it comes from the churn, pasteurized, super-soured and condensed. It contains all the health giving food and tonic values of the original buttermilk without the useless hulk of water. On account of its high lactio acid content it will keep almost indefinitely.

Lactein is now recognized as one of the most necessary food digestive agents known for both growing hogs and poultry, due to the large amount of lactic acid it contains. The lactic acid aids digestion and assimilation, causing the hog or fowl to digest all the good from the grains given them to eat, and to eliminate all the dead and diseased matter from the digestive organs thereby promoting growth and preventing disease. Lactic acid is considered the best tonic, appetizer, liver and howel regulator known for hogs and poultry.

Costs Less Than 2c. Per Gallon To Feed

One gallon of Lactein mixed with thirty gallons of water and fed with the usual grain feed will show greater gains than from feeding the grain alone, hesides it will keep the hogs and poultry healthy and their appetites keen.

If your dealer does not handle Lactein, write us for our booklet and prices.

LACTEIN COMPANY 905 E STREET MODESTO, CAL.

More Great Bargains in the $15,000.00 Implement Sale

Thousands of dollar's worth of Tractor Plows, Pumps, Drills, etc., have been sold and many great bargains yet remain. TO CLOSE OUT the following we will make greater reductions than ever on some of the items mentioned. We could not make these prices but for the fact that these implements were bought at a discount on pre-war prices. Don't miss these bargains then complain of high prices.

COMBINATION FEED AND BRUSH CUTTER

Freeman No. 13—Cutter will cut hrush, prunings, fodder, etc., capacity 3 to 6 tons green fodder per hour. Buy one and put your citrus prunings back on the land. Regular Price $103.00.

TO CLOSE THE STOCK OUT—$83.75
(These Cutters went up 5 per cent Nov. 1st)

CASADAY SULKY PLOWS

These are new South Bend Plows—no better made. 12 and 14 inch, repairs in stock. Regular price $90.

TO CLOSE OUT ONLY $57.50

SEND YOUR CHECK FOR ONLY $2.85

and we will ship you a new combination hand cultivator—worth many times that amount for garden work.

OTHER ITEMS AT GREAT REDUCTIONS

White and Gray paint at $1.95 per gallon.
$1.00 Shovels at only 65c.
Extension lamp cords, 4 ft., 50c; 6 ft., 60c; 8 ft., 70c; 10 ft., 80c.
Bolts, assorted at per pound, 10c.

SEND YOUR CHECK FOR ONLY $17.50

and we will send you a new No. 40, 10-inch walking plow (wood beam) or send only $18.50 and we will ship steel beam (South Bend plows).

BARN DOOR HANGERS AND TRACK

Not advertised before. We offer barn door track at only 7½ to 8 cents per foot, and hangers complete from $1.35 to $1.65 per pair.

PUMPS AT ONLY $8.15

Many have sent checks for pumps—ahout 20 ieft. Ward force pumps $12 and $15 values to close out, only $8.15.

DRILLS! DRILLS!! DRILLS!!-

"Farmers' Favorite" seliing everywhere in California at from $50 to $100 higher than we offer to close out new stock. 8 ft., saie price $152.75; 10 ft., only $188.65.

GASOLINE ENGINES

We have a few small gasoline engines left that we will CLOSE OUT at just about half price.

Prompt attention will be given inquiries by mail or phone.

young service boars. Walter C. Ficklin, secretary, calls especial attention to the blood lines of this sale in which is included Big Bob Wonder, Giant Jones, Giant Bob, Orange Boy, Evolution, King's Big Bone Leader, Model Fellow, King's Big Bone, Giant Buster, Big Orphan, Hather's Big Bob and President.

In no previous sale has the blood of so many great sires been found and a large crowd of buyers is expected to be in attendance.

F. L. Hall, Perris, breeder of Berkshires, has sold his prize winning senior boar pig by Ames Rival 118th to J. Francis O'Connor, Santa Rosa.

H. F. Sheldon at Santa Barbara is the owner of some choicely bred Hampshire sows bought in the Underhill sale. These sows have succeeded in raising fine litters. It is the blood that will build up Hampshire interests wherever it may go. As weanlings, these pigs will furnish the opportunity to start with the best the breed affords at the very minimum of expense.

FARM BUREAU EGG LAYING CONTEST

In order to allow poultrymen from all over the state to make entries, the California Farm Bureau Egg Laying Contest will begin at Santa Cruz on November 15 instead of November 1 as previously announced.

New modern houses are being completed, and Max Kortum of Calistoga has been induced by Prof. J. E. Dougherty of the University of California to take charge of the contest. The contest is under the advisory supervision of the University of California.

Each entrant will send a pen of 12 pullets of one breed, two to be alternates, but all to be trapnested. This feature alone is worth the entrance fee of $2 per bird. Advertising the fact that he has good birds and knowing how much better his birds are than the average are both matters that the careful poultryman considers.

Detailed information can be obtained from S. L. Gibson, chairman in charge of the contest, Santa Cruz, or direct from the Farm Bureau office, 4 Cooper Street, Santa Cruz.

COURSE IN FRUIT CULTURE

A short course in fruit culture, to be held November 10 to 20 inclusive, will be given at the Chaffey junior college of agriculture at Ontario. The subjects to be covered are: Peach Twig-borer and Thrips; Cultivators and Cover Crops; Irrigation; Sprays and Spraying; Economics of Agriculture; Pruning (with pruning demonstrations); Insecticides and Fungicides; Fungous and Bacterial Diseases; Pollination and Thinning; Cooperation With the Canner; Improvement Through Bud Selection; Standardization of Fruits. Geo. P. Weldon, pomologist, will be in charge of the course and the principal speaker but others of note are on the program each day, among them Dr. Whitten of the state university, and A. D. Shamel of Riverside.

TEHAMA COUNTY FARM BUREAU

The meeting of the farm centers of the Tehama County farm bureau will be held at Antelope, November 11; Oak Park, 14; Richfield, 17; Corning, 19; Bend, 21; Los Molinos, 24; Proberta, 26.

The director's meeting will be held in Red Bluff, November 21, 1.30 P. M.

Professor J. W. Nelson, soil specialist will be in Red Bluff on November 13 to investigate the alfalfa situation in the Los Molinos section. Any parties desiring to get in touch with Professor Nelson will kindly communicate with the farm adviser at an early date.

HONEY FROM CALIFORNIA

This has been a decidedly off season with honey producers, but every ounce possible has been saved, and to date about 117 cars have been forwarded to Eastern markets. This is about 75 per cent of the output of the state. There has been a wide range in prices all the way from ten cents to as high as 30 cents per pound. With the sugar market in the condition it has been for the last few months honey will be higher before it will be lower.

POWER

A weak heart in the wonderful engine called our body, makes a weak body, and so a spark from a Magneto can make or mar the efficiency of any tractor deriving its power from an internal combustion engine.

The spark from K-W Magneto, is so hot, that when it occurs within a cylinder filled with carbureted gas, the combustion is instant and complete, and full power is assured from every drop of fuel used. This is why a tractor K-W equipped, will show far greater efficiency, power and economy, over the same tractor using other ignition.

The K-W Magneto was built for tractors, and has proven its worth in tractor service covering a period of nine years—when two manufacturers adopted it—until today, when on over 70 per cent of all tractors made, the K-W is standard equipment.

Make sure the tractor you buy is K-W equipped. It is your insurance against expensive and annoying delays, and a guarantee of service and satisfaction. Write for a list of K-W equipped tractors.

Making a Start With Chickens

By Jean A. Koethen

WE ARE sometimes told that one can start with chickens any time in California, and this is partly true, just as it is partly true that one can hatch any month in the year. A good many things are possible which are not expedient. Just as early spring is the best time for hatching, so is fall the best time for making a beginning with chickens. Houses can be built, chicks ordered or breeders purchased, and the incipient poultryman is ready to start off at a good brisk pace in January with his hatching and brooding operations. The following letter from a Calexico subscriber shows there are those who are beginning to count the cost and make preparations for getting into the chicken game another spring:

"Please tell me through your paper: How many chickens are enough for one man to take care of? How to make a chicken house to keep those chickens, supposing I have three acres of alfalfa and one and one-half acres yard? Where is the best location around Los Angeles for the poultry business? About how much money is needed to start with? Name and price of poultry book for California."

It is a pleasure to answer such businesslike questions as these, or at least to attempt to answer, for they are not all so easily answered. In times past a good many folks have gone headlong into poultry culture because they had been given to understand that the hens did all the work and all the poultryman had to do was to gather the eggs. Happily, that time is past, and we fully understand that success with poultry demands both capital and labor.

How Many Hens to a Man?

The number of chickens one man can care for depends to some extent on the man. On one ranch I visited recently I found a woman with the help of a boy caring for 1,200. On another three men were caring for 4,000. On another, a place comprising about an acre, a man employed during the day, with the help of his wife, was caring for 1,200. Another man and wife whom I called on a couple of weeks ago showed me with a good deal of pride 800 fine pullets they had raised since spring, when they made their beginning with little knowledge and less experience. A capable wife is a great asset in the poultry business—or anywhere else. In general, one man who devotes his whole time to his flock can care for about 1,200 or possibly 1,500 hens. It depends a little on how much of his feed he raises. If he raises nothing but green feed and is not afraid of work he may possibly care for 1,500.

Use the Long House

The cut shows the type of house in general use throughout Southern California. It is usually about 20 feet deep and divided into sections 16 feet wide, designed to accommodate about 150 hens each. A section 20 by 16 feet contains 320 square feet, which allows a little over two feet per hen for 150 hens. This is a smaller allowance than most books give and would be too little if the 150 hens were entirely confined to this small space. As a matter of fact, they have the run of the length of the house and so can spare a little from the regulation allowance of three square feet per bird.

For convenience most poultrymen prefer two houses of moderate length to one very long one, and so, for 1,200 hens, you might build two houses each 20 by 64. Each of these houses would be divided into four sections and would accommodate 600 birds.

The house in the cut has a shed roof and is about five feet high at the rear and seven feet in front—just high enough to allow the caretaker to work comfortably. Along the front of the roof runs a sort of wide eaves, penthouse or awning, sometimes of wood, sometimes of canvas, to keep out sun and rain. In some plans this is adjustable and may be raised or lowered or removed to suit the weather. There are several good designs for these awnings. Along the front of the house are the mash hoppers, covered to keep out rain and filth, and above these hoppers are the nests. The roosts allow from 12 to 16 inches of roosting space for each bird, and underneath are the droppings boards, about three feet from the floor. The entire floor is covered with straw for scratching, so that the hens may be kept inside in rainy weather.

Open-front Laying House
Section of house on Bell Poultry Ranch, Burbank.

The yards for these houses can be arranged to suit. Opinions differ greatly as to just how much yard space 150 hens need, some holding that they do just as well without any. The ideal arrangement is that of two yards to each house, the hens being confined in one yard while a green crop is grown in the other. This keeps the soil clean and sweet.

No Best Location

If I knew the best location around Los Angeles for poultry I should not dare to say, but I do not know. Chickens do well anywhere in California where there is sufficient water for growing greens for them. Don't let any one persuade you that soil that is good for nothing else and has no water is good for chickens. They must have green feed, and if you can raise a little grain, so much the better.

In Los Angeles County there are five communities in which there are poultrymen enough to keep up a poultry association. These are Pomona, Gardena, Van Nuys, San Gabriel and the Burbank district. The advantage of living in such a community is that the association arranges for having eggs collected and delivered to the Poultry Producers' Company in Los Angeles. Some of these associations, I believe, also buy their feed in carload lots. If you are looking for a location you should visit all these communities and some others. Your choice will depend on your taste in climate and surroundings and to some extent on your purse.

How Much Capital?

This is the crucial question and the one I hardly know how to answer

In the first place, you intend to buy your land, I presume. If there is any good community around Los Angeles where fair land with water can be had for less than $500 an acre I do not know where it is. Probably it will cost you more than this. You must therefore first allow at least $2500 for your five acres. Of course you do not have to pay all cash, but the more cash you do pay the better chance you will have to succeed.

We used to figure that a laying house like that described cost about one dollar for every hen it housed, but it costs more than that now, certainly not less than $1.50 per hen. If you did the work yourself you might possibly get something you could use for $1.50 per hen. If you hire labor it will cost more. So you will need to allow $1800 for your two laying houses. There will be a feed house also and a brooder house, and you will need coops for the young stock that have outgrown the brooder house. Runs into money pretty fast, doesn't it? I should hardly think you could put up the bare buildings for such a flock under $2,000. Then there are fences and a brooder and other equipment for raising chicks.

Your baby chicks will cost around $20 per hundred. Buying in large numbers you may get them for a little less. I hardly think you will wish to raise 1,200 pullets the first year. Suppose you raise only 600. Most poultrymen think they must hatch three chicks for every mature pullet that goes into the laying house in the fall. Some will die, half or those that live will be cockerels, and there are always some culls. To be sure of 600 pullets you will need 1,800 chicks, which will cost in the neighborhood of $350. The cockerels, which are sold for broilers as soon as they weigh one and one-half pounds, will pay for themselves and a little more, but they will not pay for raising the pullets. For their feed you must have ready cash, and that means nearly or quite $1,000 more. We used to figure that it cost $1 to feed a pullet from hatching till she began to lay, but war prices have upset all our calculations, and my allowance of $1,000 for 600 pullets is probably scant.

Three thousand for land, $2,000 for buildings, $350 for chicks, $1,000 for feed, makes $6,350, and we have made no allowance for your own house or living, nor for the brooder and brooder house. You can raise feed enough to bring down the allowance a little, and perhaps the sale of cockerels and cull pullets will come to more than I have allowed. It seems to me a person going into the poultry business in a large way, on new ground, with no income till his hens began to lay in the fall, could hardly do it with less than $10,000 if he paid for everything as he went. As a matter of fact, most men who begin with poultry begin in a small way, with a few hundred chicks, and earn their living at some other business till they have an income from their hens. When a man does this he can begin on very little.

If my figures are extravagant I hope someone will correct me. My own experience is that both building and poultry feeding always cost more than you think they will.

A Good Poultry Book.

"Poultry for Profit," published by the Cultivator for a dollar, is the book you need. It was written to meet California conditions and gives all the information a beginner requires as to housing, breeding, feeding and raising chicks.

DEMAND FOR RABBIT SKINS

In recent years several kinds of fur, formerly of so little value as to offer no inducement to the trapper, have been raised in price, and consequently collecting them has been made profitable. Rabbit pelts, which are extensively used by hat makers, are among these products. One Eastern concern has announced that it will need 10,000,000 rabbit skins during 1919 and 1920 and it desires as far as possible to secure them from American sources. This is an indication of a market which should interest many a farmer boy. This fall and winter dried, cased rabbit skins will probably bring a reasonably good return. They are sold by the pound, which will contain seven or eight skins. Many farm boys can readily acquire, in the course of the winter, large numbers of skins which will net them a tidy sum and, in addition, they will have the pleasure of trapping experience. The United States Department of Agriculture, Washington, D. C., will supply any inquirer with the names and addresses of possible purchasers of rabbit skins and other pelts.

POULTRY PRODUCERS ELECT

The annual meeting of the Poultry Producers of Central California, resulted in election of a new board of directors. They are: J. R. Corliss, D. B. Walls and J. J. Berstedt (all from Petaluma), Wm. Evart of Pengrove, Wm. Spiers of Santa Rosa, Joseph Broadley of Fair Oaks, H. C. Gilson of Palo Alto, F. E. Bartlett of Modesto, G. W. Woods of Santa Cruz and J. H. Barber of Livermore.

The directors organized and elected the following officers: J. R. Corliss, president; V. P. Walls, first vice president; Wm. Evart, second vice president; G. W. Wood, secretary; The Anglo-London National Bank, treasurer, and J. H. Barber, general manager. The executive committee was made up of the following members; Corliss, Barber, Wells and Berstedt.

STANDARD VARIETIES

The United States department of agriculture is issuing Bulletin 1052, "Standard Varieties of Chickens." Or rather, this is the third of a series on standard varieties. It treats upon English, Asiatic and French classes. Regarding these varieties the foreword of the bulletin says:

"The breeds of chickens included in the Asiatic, English and French classes are in the main of a relatively large size and have been developed primarily as meat breeds. They are not so commonly kept in this country as either the general purpose or the egg breeds. The best known meat breeds in the United States are those of the Asiatic class. However, the breeds of the English and French classes, while averaging somewhat smaller in size than those of the Asiatic class, were developed for their table qualities and therefor are popularly grouped among the meat breeds. In the opinion of many persons the Sussex and Orpington breeds, both English, are general purpose breeds. The Orpington, in particular, is a fairly common and popular farm fowl in the United States.

"The best known section of the United States in which large table fowls of superior quality are produced in considerable quantities is the South Shore district of Massachusetts, near Boston. The chicks are hatched in the fall or early winter, and both males and females are grown to a good size and marketed as South Shore roasters. The males usually are caponized but are marketed as roasters rather than capons, and the pullets are marketed before they begin to lay."

CAVIES

A writer calls attention to the value of cavies, or guinea pigs, making the claim that these attractive pets may be made most profitable as well as afford genuine pleasure in growing them. They are said to have a food value in addition to producing beautiful furs.

A writer in the Denver Field and Farm remarks that the laws governing high egg production are very plain and easily understood. It unfailingly results from mating two and three year old hens of proven high egg production to males of known ability to transmit high egg laying characteristics to their offspring. Breed only the most vigorous birds. High egg producing hens produce higher egg producing daughters, regardless of the males with whom they are mated. The late molter is the late layer, but becomes the early layer in the spring.

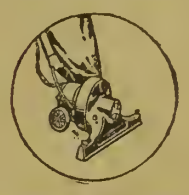
LOW SPIRITED

"Can you define a luxury?"

"No," answered the harassed citizen. "I used to think I had some idea of what constituted a luxury, but since I have to think twice before ordering pork and beans in a restaurant, I have about come to the conclusion that a luxury is anything that's for sale."—Birmingham Age-Herald.

Your Wife Should Be Considered

Washing Machine



Vacuum Cleaner

Mr. Farm Owner:

You may have fitted up your farms and out-buildings with electric, labor-saving devices, but have you considered the ***lady of the house?***

An electrically driven washer, mangle, vacuum cleaner and other household devices will greatly lessen her work and add to her comfort.

A few words to your lighting company suggesting as a preference G-E MOTORS will repay you for the trouble.

This Folder Tells You How To Make Your Idle Land Earn Money

This is the day and age when you should make every foot of land produce profits for you. If you have any size tract ranging from 80 to 5,000 acres in the Western States that need development you should send for this book at once. It tells you the way to develop your property through the use of Hydro-Electric plants, gravity irrigation systems, pumping plants, grading, and buildings; in fact, it points out the various essentials that are necessary to make your ranch a producing property.

Now is the time to act, so that you can get a crop from your land next year. It is a certainty that crops will bring good prices next year, so take advantage of this condition and get your land under cultivation now.

Write today, stating location of land and number of acres.

FARM LANDS FOR SALE

BEST LAND BUY IN THE STATE first for opportunity of increase of values; second, income, this year from $200 to $400 per acre and this will increase as the property is developed. I have subdivided my 160 acre ranch in Coachella Valley and will sell on easy terms with abundance of cheap water. This is not a one crop valley but has different and valuable resources, including immense crops of the mild Bermuda onion, the first in the market, and bringing a return of as high as $1,000 per acre. Early grapes, the first in the market, full bearing vines average $800 per acre, but the most valuable of all is the date. This is the best section for dates not only in America but in the world. Our full bearing trees of best varieties bring net returns around $90 per tree. I have 10 acres started to this variety. This ten will be worth at least five times as much when in full bearing as it can now be bought for and will bring a good income while it is coming into full bearing. Much of this land is first class grape land and 4 year old vineyards on such land is worth four times as much as this land can now be bought for. 5 acres is in four year old vines and this year's crop brought $1,920; will double that when in full bearing. 50 acres is in cotton, the best cotton you ever saw grow. Took two first prizes on cotton at Riverside Fair. This land is all for sale on easy terms. I have other unimproved land here for sale. Write or come and see not only this land but what is being done in the valley. Deal direct with owner and save commission. Wm. H. Overholtzer, Coachella, California.

100 A. $3300; WITH PR. HORSES, 8 COWS AND Bull, heifer, pigs, tools and implements, hay, fodder included for quick sale, easy terms. Convenient R. R. town, high school, 6 churches, creamery, markets. 50 acres fertile fields adapted all general crops, 16-cow pasture, wood, fruit. Good buildings, 9-room house, large barn, granary, corn, poultry, hog houses. Traveling instructions to see this unusual bargain in equipped farm page 22 Strout's Fall Catalog, 100 pages Farm Bargains 23 States; copy free. STROUT FARM AGENCY, 831 A. G. New York Life Bldg., Kansas City, Missouri.

For Sale—$5,000. Clear. 104 acres Mattole Valley. Land of the big red apple, 8 acres bearing orchards, 50 flat bottom, million feet saw-pine. New bungalow and 6 other buildings. Spring water piped under pressure over premises. 14 acres under cultivation, 2 miles fine fencing, county road and Mattole River cross place. Fish and deer, 50 inches rainfall, no irrigation needed. Best apple proposition. No trades. E. T. Gray (owner), Box 524, Arcata, California.

Prune and Apricot Orchards for sale, all sizes; full bearing, well located, with improvements, for $1,500 to $2,000 per acre. DAIRY RANCH 170 Cows, 432 acres leased land, near town and depot. 70 ACRE MOUNTAIN ranch land; good; 1,000 cords oak wood, $40 per acre. 51 ACRE best pear land, house, barn, lots of water, good location; $375 an acre. Address John G. French, Santa Clara, California.

Snohomish County, Washington — 6000 acres of the finest dairy, berry or general high grade farm lands in the northwest; rapidly improving section; no drouths, bumper crops; tracts, 1 to 80 acres; ten yearly payments. This is your opportunity. Send for literature. Brownell Land Co., Birmingham, Washington.

120-Acre Fruit and Dairy Farm for lease, $750 per year, or sale $125 per acre; under Settlers' Water Ditch. 30 acres alfalfa, good sweet potato soil, in Kings County 5½ miles from Hanford. Apply F. E. Kilpatrick, Attorney-at-Law, Hanford, California.

For Sale—80 acres 2 miles east of Earlimart in Tulare county. Domestic well is only improvement. Splendid soil in settled section. $90 an acre. W. F. Marks, 226 So. Main St., Los Angeles. Phone Main 1499.

Fine Alfalfa Land Northern Los Angeles County, easy water lift, $55 an acre, one-fifth down. Write for our alfalfa circular. Lippincott Company, Fay Bldg., Los Angeles.

Alfalfa Hay Today is worth $20 a ton in the field. I have for sale 60 acres good Kings County alfalfa land at $100 per acre. Would make a fine dairy and hog farm. H. M. Nelson, owner. Armona, California.

Stock Ranch. 880 Acres fenced and cross fenced, about 400 acres plow land, river, numerous springs, oak timber, buildings, etc., good feed country, outside range, fine climate. $16,000. W. W. Baldv. Madera County, Raymond, California.

40 ACRE PEAR ORCHARD
Seven Years old, adjoins Tehachapi, California. Must be sold to settle estate. J. F. Wilson, University Farm, Davis, California.

Almond Land in a proven district; low price, easy terms. Write William Metzner, 320 Market Street, San Francisco.

Report of the recent state conference will be made at each meeting during the month. The important topic of a state and national farm bureau will be presented during the month.

Household Department

WAITING

I could say nice things about him,
I could praise him if I would;
I could tell about his kindness,
For he's always doing good.
I could boost him as he journeys
O'er the road of life today;
But I let him pass in silence
And I've not a word to say;
For I'm one of those now waiting—
Ere a word of praise is said,
Or a word of comfort uttered—
Till the friend we love lies dead.

I could speak of yonder brother
As a man it's good to know
And perhaps he'd like to hear it
As he journeys here below.
I could tell the world about him
And his virtues all recall,
But at present he is living,
And it wouldn't do at all;
So I'm waiting, yes, I'm waiting,
Till the spark of life is fled;
Ere I raise my voice to praise him
I must know that he is dead.
—Edgar A. Post, in Service.

KOPECS, DOGS AND POETRY

AMERICAN soldiers who have just returned from six months 'service in northern Russia have brought back enough interesting impressions from Archangel and the surrounding country to regale their friends with for many a long day. An idea of what our fighting men, mostly from Michigan and Wisconsin, thought of Archangel, its girls, its customs and things in general at the top of the world is found in The American Sentinel, the newspaper published "up there" by the American Red Cross for their entertainment.

Copies of The Sentinel show that the Arctic weather was not severe enough to freeze the humor out of the soldiers or clog their rhyming apparatus. The following description of Archangel, pronounced by the editor of The Sentinel as "the best pen picture of the place written by an American soldier," proves that one of Uncle Sam's boys did not permit the job to get on his nerves:

"We are so far north that the dog-gone sun works only when it feels inclined to do so, and in that way is like everything else in Russia. The moon isn't so particular, and comes up, usually backwards, at any time of day or night, in any part of the sky, it having no set schedule, and often it will get lost and still be on the job at noon. Yes, we are so far north that 30 degrees below will soon be tropical weather for us, and they will have to build fires around both cows before they can milk them. Probably about next month someone will come around and say that we will be pulling out of here in a day or so, but then the days will be six months long.

Now, up here in this tough town there are 269,831 inhabitants ,of which 61,329 are human beings and 208,502 are dogs. Dogs of every description, from the poodle to the St. Bernard, and from the wolfhound to the half-breed daschund.

"The wind whistles across the Dvina like the twentieth century limited passing Podunk, and snow flakes are as numerous as retreating Germans were in France.

"We read in The Stars and Stripes that the boys in Italy had some tongue-twisters and brain-worriers, but listen to this. Centimes and sous and francs may be hard to count, but did you ever hear of a rouble or a kopec? A kopec is worth a tenth of a cent and there are a hundred of them in a rouble. As you will see, that makes a rouble worth a dime, and to make matters worse all the money is paper, coins having gone out of circulation since the beginning of the mix-up. A kopec is the size of a postage stamp, a rouble looks like a United Cigar Store certificate, a 25-rouble note resembles a porous plaster, and a 100-rouble note, the Declaration of Independence.

"Every time you get on a street car (tramway) you have to count out 60 kopecs for your fare and most of us would rather walk than be jammed in the two by four busses and fish for the money. Before boarding a car, each passenger usually hunts up a couple of five-gallon milkcans, a market basket or two, and a bag of smoked herring, so that they will get their kopecs' worth out of the ride, besides making the atmosphere nice and pleasant for the rest of the passengers.

"When a soldier in search of a meal enters a restaurant, he says to the waitress, "Barishnia, zakazetti bifstek, pazalouista," which means, "An order of beefsteak, lady, please." You see you always say "barishnia," which really means "girl," and until a young lady is married she is always addressed in that manner. She will answer the hungry customer with, 'Yah ochen sojalayu shtoo nas niet yestnik prepasov siechas" (a simple home-cure for lockjaw), meaning, 'I am sorry, but we are right out of food today."

"When a Russian meets another man he knows on the street, both lift their hats and flirt with each other. If they stop to talk, they always shake hands, even if they haven't seen each other for fully 20 minutes. Then they simply must shake hands again when they leave. When a man meets a lady friend, he usually kisses her hand and shows how far he can bend over without breaking his suspenders.

"Ah," he will say, "Yah ochen rad vas veedet, kak vui pozavayetie?" which, in the United States, means. 'How do you do?' To which she will reply 'Blagadaru vas, yah ochen khoroshaw," or "Very well, thank you." It is the knockout. A fellow has to shake hands so much that some of us are getting the habit around the company.'

Russian girls prompted the following tribute from one of the American boys:

I wonder, little sister, as I see you
pass me by,
With your coarse, ill-fitting garments
And your huge, ungainly feet,
If a lot of things aren't true of you.
The which your looks belie.
If some very minor changes
Wouldn't make you mighty neat.
I know a lot of damsels with twice
the chance you've had,
Who are twice as prone to grumble
as you ever seem to be,
Who are twice as quick to anger, and
every bit as bad,
As their husky, Russky sister ever
yet appeared to me.
If you could change your clothes for
some my Yankee sisters wear,
I imagine they would envy you the
roses in your face;
With proper Yankee foot-gear and a
ribbon in your hair,
You would spot them several tallies
and give them second place.
It's a weedy row you're hoeing, but
the way you hoe is great,
And I'm proud of your acquaintance, just as proud as I can be;
It is you, in my opinion, who will
build the future state,
Who will shape the greater Russia
as a true democracy.
—Red Cross Bulletin.

MORE GOOD CAKES

Mrs. Virginia Parker, Fillmore

I am sending some choice cake receipts for your approval and perhaps the approval of your subscribers. Each is tried and trusted and covers the average want for a good cake.

Spice and Fruit Cake. Good and very economical and keeps moist. Four cups flour, two cups molasses, one cup sugar, one cup lard, one cup buttermilk, one teaspoon salt, four eggs, one dessert spoonful soda dissolved in the milk, one teaspoon ginger, one-half teaspoon nutmeg, pinch cloves, one teaspoon cinnamon. Mix sugar and egg yolks, then lard, molasses, dissolve soda in the buttermilk and add one pound seeded raisins or any other fruits or spices you have. This is fine to bake in large flat cakes, two inches thick, in biscuit pan and ice with thick white icing Cut in squares or it makes a fine quantity muffin cakes.

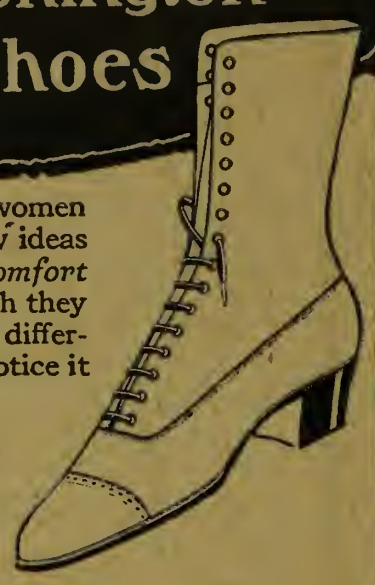
The One, Two, Three, Four Cake of our mothers is a good one, easy to remember without the book, rich if made with butter, and is fine as a loaf, as layers or for muffin cakes.

One cup butter (or substitute), two cups sugar; three cups flour, four eggs, one cup milk, two level teaspoons baking powder, one level teaspoon vanilla extract, or grated yellow rind, one-half lemon and a teaspoon of the juice , pinch salt.

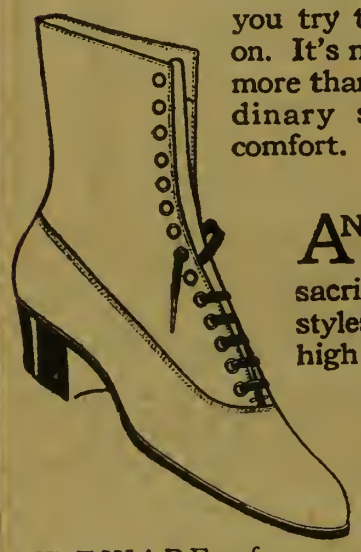
To mix One, Two, Three, Four cake:

Easy on Your Feet and Stylish

Mayer Martha Washington Shoes



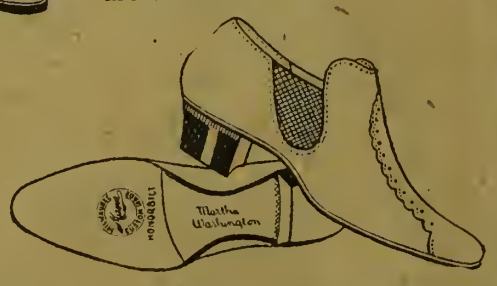
THESE fine shoes for women will give you some new ideas about comfort and style. *Comfort* was the original idea on which they were built—and they feel so different on your feet that you notice it the moment you try them on. It's much more than ordinary shoe comfort.



AND Martha Washington Shoes give you comfort without a sacrifice of style. All the latest styles are included in this line—high and low cut, lace and button.

You will notice they have an excellence of detail that gives them the stamp of quality. They wear as well as they look and feel. Martha Washington Shoes are built on honor!

BEWARE of imitations. The genuine have the Martha Washington name and Mayer Trade Mark on the shoe. If your dealer doesn't handle them, write us.



This shoe has been widely imitated. Look for the name and trade-mark on the sole or label in the top.

The California Cultivator
Weekly—24 to 48 Pages One Dollar per Year

Separate eggs. To well beaten yolks add one cup sugar, cream butter or substitute and add one cup sugar. After well beaten put the two mixtures together. Sift flour, salt and baking powder together twice and add with milk and flavor. Lastly fold in the whites well beaten.

Brides' Cake. This is especially delicious and is old and tried for many generations.

Whites 20 eggs (whe-e-w!) one and one-half pounds flour, one and one-half pounds sugar, one pound butter.

Each part must be carefully prepared and well beaten. Eggs must be so stiff the bowl can be turned over without spilling. Mix lightly together. Flavor with one teaspoon lemon extract and one teaspoon almond. Bake in large pan with center pipe. Ice thickly with good, white frosting when almost cold.

Lord Baltimore Cake. One and one-quarter cups sugar, three-quarter cup Crisco, one-half cup water, one teaspoon vanilla, two and one-half cups sifted flour, two and one-half teaspoons baking powder, one-half teaspoon salt. Yolks six eggs beaten stiff. Cream Crisco, add sugar and cream together. Sift together three or four times all dry ingredients and add alternately with water and vanilla. Beat mixture thoroughly. Last fold in lightly beaten yolks of eggs.

Lady Baltimore Cake. One and one-quarter cups sugar, three-quarter cup Crisco, one-half cup cold water, two and one-half cups sifter flour, one teaspoon vanilla, one-half teaspoon salt, two teaspoon baking powder. Whites six eggs beaten stiff.

Mix same as Lord Baltimore Cake, using whites of eggs instead of yolks. These make fine loaf cakes iced, plain or layers.

Filling or Icing. Three cups sugar, two-third cup boiling water. Boil syrup till it will spin a thread four inches long from point of spoon dipped lightly in it. Don't stir or syrup will turn to sugar. Have whites of eggs beaten about half. Pour very slowly the cooked syrup over, beating constantly with other hand until cool and right for spreading. (This is for both cakes). Before dividing, take out six tablespoons plain for tops of both cakes. For Lord Baltimore Cake take one-half icing, add to it one-half cup chopped raisins, one-half cup chopped nuts, five figs cut small.

For Lady Baltimore Cake, use other half icing, add one-half cup candied cherries ,one-half cup candied pineapple cut fine.

Florence MacLean, Rialto

The following recipes are reliable to use for storing reserve supply, unexpected company, etc., and especially suitable for lunch boxes, because of their good qualities. Of delicious and appetizing taste, good keeping, and last, although not least, economical.

Rocks. Three cups of uncooked oatmeal (rolled oats), two cups flour. Rub into oatmeal and flour one cup lard and one-fourth teaspoon salt. Add two cups brown sugar, one cup hot water with one teaspoon soda, dissolved in it, one teaspoon cinnamon, one-half teaspoon cloves, one cup of raisins or nuts, or a portion of both to suit taste. Mix thoroughly, then drop the dough from a teaspoon in tiny cakes over the pan to bake in a quick oven till cakes are a golden brown color.

Ginger Wafers. One cup sugar and the same of butter creamed together, one cup molasses, one-half cup coffee (liquid), two teaspoons soda, one tablespoon ginger, use sufficient flour to make a dough stiff enough to roll very thin. Cut out and bake quickly.

Swiss Fruit Cake. One cup flour, one cup sugar, two teaspoons baking powder. Sift all together four times. Add one pound whole walnut meats and 15 cents worth of dates to the flour and sugar, dry thoroughly, then add beaten yolks of four eggs, mixing well, then last the beaten whites of the four eggs and a pinch of salt. Put this mixture in a loaf cake pan and bake in a moderate over 30 minutes.

WHAT'S YOUR LIMIT?

"How long do you suppose a man can go without air?"

"Hard to tell. The longest sleeping car trip I ever took occupied seven days."

A LETTER FROM JERUSALEM

Natives of Jerusalem declare that the Bibical prediction of a day when the lion and the lamb would lie down together has about reached this quarter of the globe. For the first time in the history of the Holy Land, Christians, Moslems and Jews are working side by side in industrial work rooms which were opened by the American Red Cross Commission to Palestine. Racial and religious hatred and suspicion are being forgotten by the men and women, refugees of the war, who are toiling there together

One of the greatest needs of the people of Jerusalem has been clothing. Another great need has been employment for religious pilgrims who were stranded in the historical city in 1914. The American Red Cross therefore arranged with the British Government to establish looms for hand weaving in an old street known as the cotton market. Fifteen shops and one large building, formerly a mill, were rented, and 28 looms were furnished by the Red Cross.

To put the work on a permanent commercial basis, a native, Shukri Batato, was put in charge of the enterprise. Cloth from Red Cross workshops at Gaza and weaving thread were supplied, and weaving was begun. The looms not only are giving employment to a great many persons, but are providing an output of cloth of good quality which can be sold at reasonable prices. Of equal importance is the spirit of good feeling which is growing up among the people of different religions and races.

Plans are being made to permit a certain number of apprentices to learn the art of hand weaving in the shops, and a special sum of money has been furnished by the British Government for this purpose. The sales from the shops have been good, and it is believed that the business will prove successful.—Red Cross Bulletin

SOME HOUSEHOLD HELPS

By Martha

To keep silver from tarnishing when it is to be laid away for some time rub the entire surface of each piece with fresh lard, then wrap each piece in old linen then in paper and lay away carefully. When needed for use the silver will come out as bright as when put away, and all it will need will be a plunge in very hot water with a little soda added, then in clean hot water and a rubbing dry with a soft cloth.

To keep nice steel carving knives and forks from rusting apply a preparation composed of one part rosin to two parts tallow. This should be melted together and applied while hot Let dry and wrap each piece separately before putting away. To clean brass handles on furniture unscrew and take them off, put them in hot suds and let remain for several hours, then scrub with a brush, rinse and dry thoroughly, and polish until they shine like new, then screw in place again.

Table cloths, doilies and napkins last twice as long if they are never rubbed hard in washing, and the best way I have ever tried for washing the pieces is to put them to soak for several hours in warm suds made with dissolved borax soap chips. A very little of this soap solution makes a nice soft suds that softens and whitens without injuring the fabric in the least. Dish towels boiled in this suds once or twice a week are kept soft and white as long as they last and to keep the inside of the coffee pot clean and in a sanitary condition fill with hot soap chip suds and let boil for half an hour, then rinse and dry out in the air and sunshine. The silver in every day use is kept bright and shining by washing through the suds, then drying and polishing with soft linen.

One may so arrange that it will take but a minute to prepare a glass of delicious lemonade. Make a thick syrup from five or six pounds of white sugar and a little water. Extract the juice from a dozen lemons and grate into the juice the rinds of half of them and allow to stand over night, then stir into it the syrup previously prepared, mixing thoroughly. When wanted, put a teaspoonful in a glass, fill glass with cold water and you will have a fine glass of lemonade. You can use oranges in the same way, except that less sugar is needed

The Cultivator Patterns

3013—Ladies Dress—Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 38 requires six yards of 44 inch material. The dress measures about two and one-eighth yards at hem of skirt. Price ten cents.

2660—Girls Dress. Cut in four sizes: 8, 10, 12 and 14 years. Size 12 requires four and one-eighth yards of 40 inch material. Price, ten cents.

3010—Ladies Apron. Cut in four sizes: Small, 32-34; Medium, 36-38; Large, 40-42; and Extra Large, 44-46 inches bust measure. Size Medium requires three and one-quarter yards of 36 inch material. Price ten cents.

3026—Girls Gymnasium Suit. Cut in five sizes: 8, 10, 12, 14 and 16 years. It requires three and three-quarters yards of 27 inch material for the blouse, and three and three-eighths yards for the bloomers, for a 12 year size. Price ten cents.

3025-3008—An Attractive Costume. Waist 3025 cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt 3008 cut in seven sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. To make this attractive style for a medium size, will require five and three-quarters yards of 44 inch material. Width of skirt at lower edge is about one and three-quarters yard. Two separate patterns, ten cents for each pattern.

3030—Girls Dress. Cut in four sizes: 6, 8, 10 and 12 years. Size 10 requires three and three-quarters yards of 40 inch material. Price ten cents.

2675—Ladies House Dress.. Cut in seven sizes: 31, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires six and one-eighth yards of 36 inch material. Width at lower edge is about two and one-third yards. Price ten cents.

3028—Girls Coat. Cut in 3 sizes: 10, 12 and 14 years. Size 14 requires 3½ yards of 44 inch material. Price 10 cents.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH

How to Order Patterns

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 cent) stamps for each number. In order to furnish our readers with the very latest Chicago styles, all pattern orders are filled in Chicago. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

PATTERN DEPARTMENT
California Cultivator
Los Angeles.

THIS WEEK'S PATTERNS

This week's patterns show four good styles for young girls, three of them suggesting combinations of materials that are good for make overs. No 2660 would be particularly suitable for a "best" dress with collar and cuffs of detachable embroidery or of same material as jumper embroidered in simple design with heavy yarn or silk. The tiny buttons, covered with material make a very attractive finish. If the guimpe waist is of silk of daughter's favorite color she will be a pleased and happy little girl.

The school dress opposite is pretty and practical in wool or heavy wash material such as Devonshire or gingham. Many new patterns in the latter are being shown in the stores for fall and winter wear.

Coat 3028 of heavy jersey will be very comfortable and stylish. If of closer woven material and lined it will be warm enough for riding in cold weather.

A word about linings. Their price is one of the most appalling features of the present day dressing problem. The sateens and other cotton mixtures wear well and are satisfactory except for relining a rather snug fitting garment. Many an economical woman has purchased a sateen lining for an old coat and cut and fitted and sewed it in only to find that it made her comfortable old coat too tight to button and the arm's eyes too tight to wear. I have found pongee the best solution, that is the real Chinese pongee of raw silk. As yet it has not soared upward on the high price wave, being purchasable at half the price of cotton sateens. If the color is objectionable, being of silk it readily takes on color from the practical soap dyes we now have. Brown, green, red or gray will darken and change the color very satisfactorily.

Work apron 3010 is the practical slip-on-in-a-hurry style that has long been popular. No. 2675 with deep arm holes and long sleeves is one of the best work dresses we have seen. If opened down to the hem it will be easier to iron.

The gymnasium suit 3026 gives patterns for blouse and bloomers both for ten cents, surely a bargain.

TO CLEAN ZINC JAR TOPS

My latest discovery is a way to clean zinc jar tops. Scour with Lighthouse Cleanser or Old Dutch, wet with gasoline. Heat caps, it facilitates the cleaning.—Jessie S. Purrier, Bonsall.

* * *

To Cultivator Readers:

Send in practical hints such as the above. Subscription credit will be extended if you send name and address of one to whom you wish credit given.

CORRECTION

In the recipe for hot water cake by Mrs. S. D. Bickford, published in the Cultivator of October 11, the amount of hot water was omitted. The recipe should read: Four eggs, two cups granulated sugar, two cups flour, two teaspoons baking powder, one teaspoon vanilla. Beat eggs, add sugar and beat again, add flour, lastly hot water. Bake about 40 minutes in moderate oven.

THE DOCTOR'S ORDERS

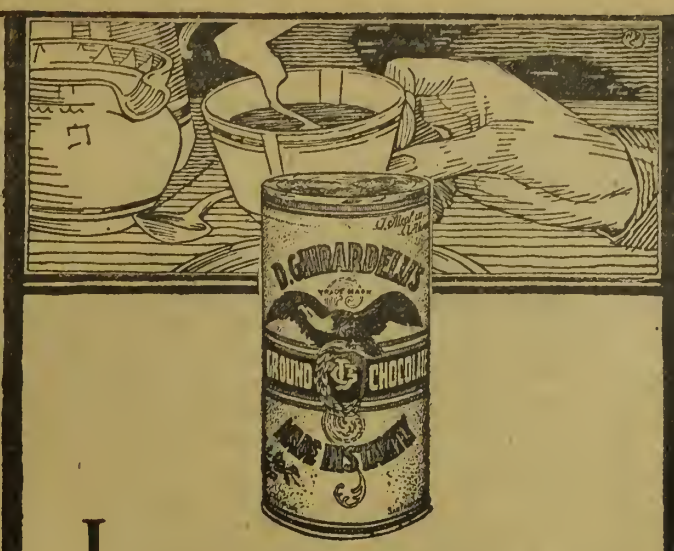
She was the sort of woman who always tells everybody her business. With a cheery smile she settled herself at the counter and began: "My husband has been very ill—very ill—so I have to do his shopping, and I want a shirt."

"Certainly, madam," said the salesman, courteously, "stiff front and cuffs?"

"Oh, no!" she exclaimed ,in horrified tones, "the doctor says he must avoid anything with starch in it."—Pittsburg Chronicle-Telegraph.

OH, FOR AN ACCIDENT!

Some diplomatists seem to achieve great success simply by sitting tight and letting matters take their own course, something after the manner of the Arkansas farmer who retired in disgust, saying he believed he could make more money by accident than he could by farming.—Kansas City Star.



LOTS of chores about the farm—up late and early—out in all sorts of weather. Farm folks need a food-drink like Ghirardelli's Ground Chocolate—delicious, rich, strengthening! A steaming cup of Ghirardelli's has saved many an exposure from developing into a serious illness. Made in a jiffy, too!

Never sold in bulk—but in cans only.
In ½ lb., 1 lb. and 3 lb. sealed cans—
at the store where you do your trading.

Say "Gear-ar-delly"

Corn: California yellow, 3.40@3.55 cwt., Egyptian, 3.25@3.35; Milo Maize, 3.07½@3.15.

Rye, 3.25@3.35.

Barley, feed, 3.15@3.20; brewing, 3.25@3.30.

Wheat: Following are net weight prices for bulk grain, based on federal standards and grades at San Francisco Bay and Los Angeles Terminals:

	Per Bushel	Per Cental
Hard Wheat—		
No. 1	2.20	3.66 2-3
No. 2	2.17	3.61 2-3
No. 3	2.13	3.55
Soft White—		
No. 1	2.18	3.63 1-3
No. 2	2.15	3.58 1-3
No. 3	2.11	3.51 1-3
Club and Sonora—		
No. 1	2.16	3.60
No. 2	2.13	3.55
No. 3	2.09	3.48 1-3

For sacked grain add nine cents per bushel of 60 pounds to above price. Deduction of three-fourths of a pound is made for weight of standard grain bags. Wheat grading under No. 3 and mixed or

smutty wheat will be purchased according to merit.

Mill Feed (per ton): Bran, 43.00@44.00; mill run, 42.00@43.00; Rolled Barley, 52.00 @54.00. Linseed oil cake meal, nominal; cocoanut cake or meal, 41.00@42.00 per ton.

HAY

Under date of November 1, Scott-Magner & Miller says:

Receipts past week 885 tons. As can be readily noted there has been a big drop in the last three weeks, this is caused by the fields having become cleared and the car situation having become more acute. It is almost impossible to get a car at any of the loading points to ship hay to San Francisco. Considerable hay changed hands in the country districts during the past week at advanced prices over anything reported heretofore. The dry weather has caused this trade to improve considerably. Fancy wheat and red oat hay are in good demand, as is also a good grade of stock hay if free from foxtail. There is considerable call for alfalfa. Export trade is practically nominal, owing to the stevedores' strike on the waterfront.

We quote today wholesale prices in carload lots as appear from dealers transfers upon the hay market—for prices to consumers charges of cartage, commission and handling expenses must be added according to conditions:

Fancy wheat hay
(light 5-wire bales) .....21.00@23.00
No. 1 Wheat or Wheat and
Oat hay .....18.00@22.00
No. 2 Wheat or Wheat and
Oat hay .....17.00@19.00
Choice Tame Oat hay .....20.00@23.00
Other Tame Oat hay .....17.00@20.00
Wild Oat hay .....16.00@10.00
Barley hay .....16.00@20.00
Alfalfa hay .....18.00@23.00
Stock hay .....13.00@16.00

Citrus Markets

November 5, 1919.

The citrus shipping year ended Friday night, October 31. It will be noted that the shipments were far more than twice as great as last year. Also while last year ended with practically every Valencia cleaned up this year ends the shipping season with more than 2,200 cars of Valencias still to go forward. In 1917 there were 1,500 cars of Valencias yet to go on November 1.

Shipments Year 1918-19

Southern California: Oranges, 35,436 cars; lemons, 9,441; total, 45,177 cars. Last year: Oranges, 14,346; lemons, 6,197; total, 20,543.

Central California: Oranges, 3,737; lemons, 264; total, 4,001. Last year: Oranges, 2,536; lemons, 115; total, 2,651.

Northern California: Oranges, 256; lemons, 5; total, 261. Last year: Oranges, 203.

Total shipments from all California for year 1918-19: Oranges, 39,429; lemons, 10,010, or a total of all citrus shipments for shipping year, 49,439. Total of all citrus from state for year 1917-18, 23,397. The year 1916-17 all citrus 54,504.

Shipments for year ending October 31, 1916: Southern California, oranges, 31,757; lemons, 6,940; total, 38,697; Central California: Oranges, 5,416; lemons, 69; total, 5,585; Northern California: Oranges, 610; lemons, 1; total for the year, 44,893.

Shipments for the year ending October 31, 1915: Southern California, all citrus fruits, 40,160; Central California, 5,893; Northern, 632; total, 46,685.

Shipments for the year ending October 31, 1914: Southern California all citrus fruits, 41,978; Central California, 5,951; Northern, 409; total, 48,338.

Shipments This Year

Shipments of oranges from Southern California to date since November 1, 1919: Oranges, 230 cars; lemons, 46; total, 276. To same date last season: Oranges, 11; lemons, 94; total, 105.

WRONG NUMBER

"Auntie, did you ever get a proposal?"

"Once, dear. A gentleman asked me to marry him over the telephone, but he had the wrong number."

THAT'S RIGHT—ROAST 'EM

Socrates lifted the cup.

"What is this stuff?" he asked.

"Hemlock."

"Oh! that's all right. I thought it was one of those substitutes for coffee."—Cartoons Magazine

BLASTING ALLUVIAL SOILS

Like 'dobe soils, alluvial soils are made up of exceedingly fine particles which readily puddle. In an ordinarily good condition of tilth, however, there is no benefit to be derived from deep loosening by blasting or other treatment, since the drainage, root penetration and other features would be rather harmed than benefited.

Before making a general rule that all alluvial soil should not be blasted, however, it is well to consider two or three conditions which call for just this treatment. For instance, one of the characteristics of the soil is an abundance of organic matter. Should this supply become depleted by careless farming, a series of evils result. The particles puddle, the soil becomes hard and solid, drainage and moisture storage become poor, plant food, even that applied in commercial fertilizer, quickly reverts to insolubie forms, and roots fail to penetrate.

As time passes this condition grows worse instead of better unless some means is found to get into the soii that one original factor which is lacking, the organic matter. Now, if the tight soil is well loosened, and at the same time a heavy-rooted crop is planted, immense quantities of roots are introduced deep into the soil, and further large quantities can be plowed under. Then conditions may be expected to take a turn for the better. The loosening, however, is a vital step. Until it is done roots will not penetrate, owing to the inhospitable conditions prevailing in the undersoil.

Sometimes an alluvial meadow is used for pasture, with the result that it becomes badly tramped and packed. Or a road may be used across land it is later desired to cultivate. The puddled, bricky condition of the undersoil at such points will respond slowly if at all to any treatment till it is first broken up, aerated and fined by blasting.

The productiveness of alluvial soil lies in its natural open, granular condition. Every effort should be bent to keeping it so with proper rotation of crops, and when this is done no blasting will be needed.

EUCALYPTUS FIBER

An Australian who has been working on the matter for 15 years claims to have discovered a process of utilizing eucalyptus bark for commercial purposes. He now has for inspection at his factory near Melbourne, samples said to be equal to the best flax and jute, at but half the cost of those materials. The factory samples shown include twine, binder twine, light and heavy rope, and bagging from which bags for cereals and vegetables may be made. It is said that every particle of the fiber can be used for these purposes, for furniture stuffing, fibrous plaster work, packing refrigeration chambers, etc. It is claimed this product meets the three great demands—staple of good length, strong and durable product, and low cost of manufacture. If so it will prove a great industry as raw material in inexhaustible supply may be had for the harvesting.

MARK FRUIT PACKAGES

Fruit shippers must have a care and see that all packages shipped from one state to another conform to the amendment to the federal food and drug act in giving exact weight and contents. This law has been in force for some three or four years, but during the war many of its provisions were ignored because of fear that the fruit packing industry might be embarrassed by rigid enforcement. The food administration now serves notice that all packages of fruits and vegetables shipped from one state into another must be marked plainly and conspicuously on the outside of the package in terms of net weight or dry measure or numerical count denoting exact contents. Packages such as hampers and crates may be marked showing either net weight or dry measure or numerical count. Barrels should be marked "One U. S. Standard Barrel." Sacks containing vegetables should be plainly marked showing the net weight of contents—preferably in uniform quality.

HOW TO MAKE HONEY AND CARE FOR BEES

The University of California announces a beekeeping short course to be held at the university farm at Davis, November 10-22. The first week will be given to instruction in the art of handling bees and the second week will cover material of special value to commercial honey producers.

The commercial course will be repeated at Fresno, November 24-29; Riverside, December 1-6; San Diego, December 8-13. Beekeepers desiring more information regarding these courses should write Dean of University Farm, Davis.

DISCRIMINATING

Two political candidates were discussing the coming local election.

"What did the audience say when you told them you had never paid a dollar for a vote?" queried one.

"A few cheered, but the majority seemed to lose interest," returned the other.—Harper's Magazine.

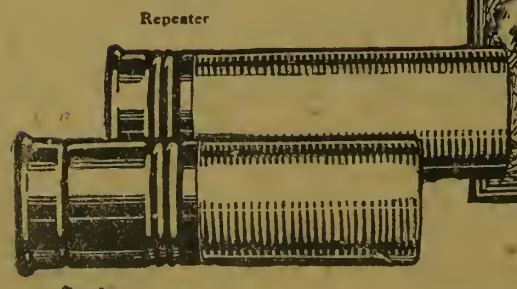
The hard-hitting Winchester pattern is evenly distributed. No game gets through and no game is mutilated

A patchy pattern often means a miss, many times a cripple, and sometimes badly mutilated game



GAME GETTERS

THE steady game-getting qualities of Winchester Loaded Shells have made them the favorite shells of experienced shooters.

Under all weather conditions they play true to form, shooting a strong, even spread of shot. The Winchester waterproofing process prevents swelling from dampness; special lubrication of the paper fibres prevents brittleness and splitting in dry weather.

The secret of the famous Winchester Shot Pattern is in the control of the gas blast from the exploding powder. This in turn depends upon the wadding in the shell.

The Winchester gas control system

The Winchester system of wadding and loading is the result of repeated experiments to determine the most effective control of the gas blast. The base wads of Winchester Shells are constructed to give what is known as progressive combustion to the powder charge. The ignition spreads to the sides, in all directions, as well as forward.

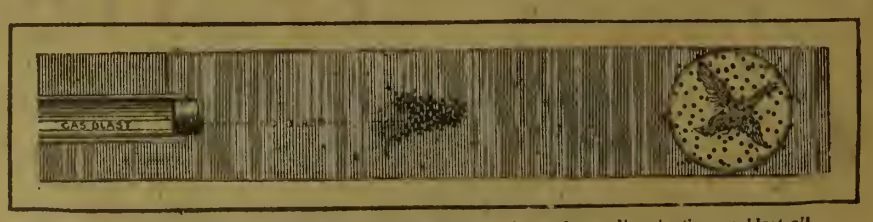
Under the heat and pressure of this progressive combustion, the tough, springy driving wad expands and fills the bore snugly, completely sealing in the gas behind. In being driven through the bore this wad offers just enough resistance to the gas blast to insure complete combustion of every grain of powder, so that the full energy of the whole powder charge is developed at the muzzle. Thus none of the shot charge leaves the gun until it is being driven by the maximum energy and velocity possible from the load.

At the muzzle, the expanded, snug-fitting driving wad is slightly checked by the muzzle choke or constriction, while the shot cluster travels on unbroken by gas blast or wadding, making the hard-hitting uniform pattern for which Winchester Shells are world famous.

Uniform shells. From primer to crimp, Winchester Shells are so balanced in construction as to insure the maximum pattern possible from any load. The broad fish-tail flash from the primer gives even and thorough ignition; the driving wads completely seal in the gas behind the shot; the stiffness of the crimp or turnover at the shell head is varied exactly according to different loads, great care being taken never to stiffen it to such a degree that it offers undue resistance to the powder explosion.

Clean hits and more of them

To insure more hits and cleaner hits in the field or at the traps, be sure your shells are Winchester Leader and Repeater for smokeless; Nublack and New Rival for black powder. Leading hardware and sporting goods dealers in every community carry Winchester arms and ammunition. They will be glad to assist you in determining the particular load best suited to your purpose. Upon request, we will send you, free of charge, our interesting booklet on Winchester Shotguns and Loaded Shells.



The Winchester system of wadding. The wadding expands evenly, sealing in the gas blast all the way to the muzzle, where the wadding is checked by the "choke" or constriction. The shot cluster travels on ahead unbroken. Actual test target 320 pellets out of 431 or 74% of the shot charge (1¼ oz. of 7½ chilled) inside a 30-inch circle at 40 yards.

otato Growers Studying Methods in the Field

It pays to ask questions, and the busiest bunch of questioners we have seen for a long time was photographed in this potato field. Note the row of automobiles at the extreme left of the picture, and these were hardly half of the machines required to carry the potato conference which is described on the third page of this week's Cultivator.

The Car For Rough Roads—New Overland 4 With Three-Point Suspension Springs

BOUNCING, jolting and swaying are replaced by a wonderful new riding comfort—the kind that cushions road bumps; that absorbs shock and vibration.

It is the new riding comfort of Overland 4 with Three-Point Suspension Springs—the greatest improvement to riding since the introduction of pneumatic tires.

These Three-Point Suspension Springs are attached at the ends of a 130-inch frame, giving Overland 4 long wheelbase road steadiness. Yet they preserve the lightness, driving ease and economy of 100-inch wheelbase.

Many other notable advantages result from these springs. Every part of the car has longer life with correspondingly lower upkeep cost because shielded from constant road blows. Tires have greater mileage. Light weight effects economy in fuel and oil.

Overland 4 is a sturdy, serviceable car of highest quality as well as handsome design and attractive appearance. Equipment is complete from Auto-Lite Starting and Lighting to Demountable Rims.

Have the Overland dealer show you this remarkable car. Ask for Booklet. Overland 4 Touring, $845; Roadster $845; Coupe, $1325; Sedan, $1375. Prices f. o. b. Toledo.

California Will Grow More and Better Potatoes

Editorial Correspondence

THE CULTIVATOR has received from Genasci Farm a letter dated November 1 which refers to this as a banner year for potatoes in Willow Valley, Nevada County. And Nevada County is one of California's banner producers when it comes to average yield per acre, 235 bushels. The Statistical Number of the Monthly Bulletin, issued by the former state board of horticulture, gives the average potato yield for various counties of California as from 85 to 300 bushels per acre, most counties ranging around 130 to 150 bushels. Our Nevada County subscriber gives as his production from some hills 30 to 38 pounds, or an average of 400 sacks per acre. Presumably these were selected hills but they indicate wonderful producing capacity. Unfortunately that county has little more than 200 acres in a normal year. We hope she will produce more during the coming year, which will be, we predict. California's greatest potato producing year.

Our biggest producing potato county is San Joaquin with 25,000 acres. This has a long lead over all other counties of the state. The next two in line are Contra Costa and Los Angeles, each with 8,000 acres. Los Angeles County's average is only 130 bushels. If we may be pardoned for making another prediction, this average will be materially raised another year. That prediction is made because of an event of last week. It was a potato growers conference arranged for by the Los Angeles County farm bureau. Many years ago a farmers institute conducted by Dr. A. J. Cook was held in an orchard in Riverside. Section after section of the place was visited and different problems taken up on the ground, with explanations and suggestions made by practical men. We referred to this at the time as one of the most helpful institutes ever held in the state. The idea has been carried out many times since, and the conference held by the Los Angeles County farm bureau last week was similar to the old time field institute but vastly more effective and of more practical value. This was in part due to the modern automobile, for the conference, which began at ten o'clock in the morning and extended till after dark, made necessary travel from farm to farm covering a distance of nearly 70 miles.

The first place visited was the Pasadena sewer farm in charge of E. D. MacSweeney. There are something like 150 acres of potatoes planted on this farm, of the White Rose, British Queen and Harvest King varieties. They were nearly ripe though another irrigation will be given, and it will be at least a month before they will be dug. These potatoes were planted on August 24. Other places visited were those of Thomas Lambert and Mr. MacSweeney. These in the El Monte section and before luncheon.

Dip to Prevent Scab

On one of the places visited the potatoes showed a very serious infestation of scab. The seed planted had been apparently perfectly free from the scab so that the planter thought it unnecessary to dip. The field had been in alfalfa and the entire growth was plowed under for green manure only a short time prior to the planting. Other fields which had been treated similarly, that is as to the green manure crop but with dipped seed, showed practically no scab. But the one most important lesson of the day was this, that no matter how clean the seed, dipping in bichloride of mercury solution is the only safe procedure.

Cold Storage Seed

Another question in securing seed for the fall crop is how best to secure 100 per cent germination. Usually the spring crop is used for fall crop seeding. Mr. MacSweeney's place showed one plot planted to cold storage potatoes, that is, the fall potatoes kept through fall and early summer in cold storage and planted. When planted directly from the cold storage the germination was low, but if given two or three weeks exposure in shade and at ordinary temperatures of the air almost perfect germination was secured.

A new disease, or rather a condition, was noted which caused some comment as to whether it might mean reduction of yield. This was a curl leaf or roll of the leaf, but neither insect nor fungus seemed to be present which might be the cause of the trouble. The general opinion was that this might be caused by over-irrigation or some physical condition.

Hand Cutting

The human hand and a good knife seem to be the choice of most potato growers when it comes to cutting seed potatoes. A machine was exhibited at the sewer farm but it was taken from the farm junk pile where it had been relegated, not because it did not work, but while it was little more rapid than the human hand it was otherwise in no sense satisfactory. A good cutter can handle about 20 sacks per day.

To San Fernando Valley

After the various ranches in the El Monte and south Alhambra sections had yielded their lessons the procession of automobiles wended its way to Burbank in the San Fernando Valley. The Women's Club and the ladies of the farm bureau in that section served luncheon.

Discussing the Conference

Adviser Hodgson and Assistant Adviser Gordon planning the next step in the potato conference. Group of inquirers and specialists in background.

Potatoes Good to Eat

Just a word about the luncheon—no criticism intended for it was exceptionally fine. There was fruit and nut salad; there was apple pie and cheese, meat and potato and other solids. But we recall having criticized a banquet held at the Panama-Pacific Exposition when the Swine Breeders of California ate roast mutton and various other products of the ranch, but not a taste did they get of roast pig. The potato growers got little more than a taste of real potato. We want to see our potato growers stage a dinner some time in which the real importance of the potato as a human food may be demonstrated. We would have potato soup, potato bread, potato salad and baked potato. Then there certainly would be a potato pudding—and we know it would be right tasty—and, in addition of course, sweet potato pie.

But short as potatoes were on the menu, they were in very good form in the conference which followed the luncheon.

Methods in the Delta Section

Prof. S. S. Rogers of the University of California was first called upon by Adviser Gordon who acted as conference master. Prof. Rogers gave a plain every day talk on procedure as usually followed by potato planters in the Delta section. The planting there is usually the last of February or first of March and the potatoes are dug in June or July. The time of digging, however, is not governed by the calendar but by the tops. The tops are allowed to lose their dark green, to yellow up a little and later take on a brownish cast. They are not dug until this brown appearance comes.

Handling Seed Potatoes

If they are for seed great care is used not to permit them to burn in the sun. They are not sacked immediately they are dug, but are left for possibly two hours, in any case 30 minutes, in the open sunshine before gathering. They are then placed in long piles in the shade. These are sometimes 15 or 20 feet long. Buckets of cold water are dashed over them and they are covered with a couple of feet of straw which is usually plentiful in the Delta section. Every two or three days the throwing of buckets of water over the entire pile is repeated. They are allowed to remain in these piles ten or 12 days, care being taken that they are not drowned out with too great a quantity of water, but sufficient must be used to maintain a moist, cool condition of the entire pile.

After taking from the pile and drying they are dipped in a corrosive sublimate solution. This dipping should be in the shade, and the seed absolutely must not be placed in the direct rays of the sun after dipping After drying they are cut and at once planted. Seed ripened in this way will give almost 100 per cent stand. but Prof. Rogers hastened to add that the half of the story is not yet told The successful growing of potatoes calls for thorough preparation of the land.

Preparation of the Land

The first step here has to do with irrigation. Put on all the water the land will hold, "then irrigate again." plow and plow deeply; harrow and make a perfect seed bed; plant; give best of culture and harvest a big crop. Only a hint of the details as given by Prof Rogers has here been given, and he summed the whole matter up by saying: "Do not omit one step in this method of work or the entire season's effort may be lost."

Fertilizer Experiments

Adviser Hodgson referred to experimental plots of which the farm adviser's force had oversight during the past year. These plots have been tested with different forms of fertilizers, and the results will later be given out by the bureau. One point made by Mr. Hodgson was in effect that application of superphosphates has shown little returns. Two hundred pounds to the acre of nitrate of soda. however, had shown marked improve-

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

THIS WEEK'S COVER

The most practical answer to practical questions is given in the field by the soil and by the crops. The cover photograph shows potato growers asking these practical questions. An entire day was given by them to visiting from field to field. Answers to their questions were given by soil and crop and hy experts from our state university and elsewhere, and these answers will be exemplified in the crops gathered a year later. It appears now that California will produce its banner potato crop in 1920. This scene was taken on the farm belonging to the city of Pasadena, where there are growing at the present time over 150 acres of potatoes.

INCREASE THE LIMIT

There is an effort being made to correct a defect in the federal farm loan act. This is the provision which limits the maximum loan to $10,000. It is hoped to increase this to $25,000. We believe the reason for establishing the $10,000 limit at first was that the measure was intended to benefit the small farmer, but in these days of the 50 cent dollar a $10,000 farm deal is not a fair limit to place upon a class from which so much is expected. If the farmer is expected to produce more and lower the cost of living, lower the cost of his money and increase his opportunity. $25,000 is none too much.

AND SON

The Cultivator carries advertising for livestock breeders—especially we recall advertisements of swine breeders—with name of advertiser ending in "& Son." In one case we have in mind, the "Sou," in another, the "Sons," are graduates of our state agricultural schools. It seems to us that this is a common sense recognition of the euergy and ability of the youngster who has finished school and is ready to enter life. He has been made a part of the firm; he has an interest. Give him a responsihility and a name, and if he has any initiative and pep he will make good.

Give the boy a chance.

STEADY THE BOAT

Chas. S. Barrett, one of the representatives at the industrial conference and president of the Farmers Union, has issued an appeal to farmers to awake to the peril which confronts our nation at this moment. The industrial conference failed to accomplish any concrete thing in adjusting the differences between lahor and capital. The farming interests were represented in that conference, hut only in name. Meantime the lahor question continues a serious one, and somebody is rocking the boat. Open threats of revoiution are made. In New York right under the nose of the authorities the Boishevists hold meetings in which they display the red flag. They sing songs in which they laud revolt while they in concert ridicule and execrate the American flag.

In war or in peace, when trouble comes, the farmer is appealed to to steady the hoat, for he is known as the great stahiiizer, the nation's baiance wheel. He began by carrying his rifle as he followed the plow; in every emergency since he has been appealed to for help, and today, 40,000,000 strong, he is asked to take a controling hand in the affairs of the nation. Mr. Barrett voices this appeal:

"We are asking farmers to rise in their inteliectual and moral might. We are asking them to take their rightful place in the nation. We are asking them to recognize the fact that collectively their power for good is irresistible and we know that their power for evii will never be exercised. They are imbued with justice, inspired by lofty patriotism."

$60 A HUNDRED

Never in the history of California until this year have peach trees commanded $600 a thousand. The demand will be great. The supply is exceedingly short, longer in this state than in most others; still there is a shortage which will make it necessary for the intending planter to get busy if he wants to be sure of stock for the coming planting season.

Apricot trees are not quite so high yet, but almost, and the suppiy is very limited. Aimonds, prunes, pears—all along the line there is shortage.

The price which fruit has commanded this season is one of the causes of the increased demand, and war labor conditions are one cause of the shortage of trees. The wise farmer is scratching his head and asking how long will the demand for fruits continue and can he afford 60 cents for a peach tree.

The Cultivator is not a prophet, but on the general principle of advancement and having faith in the future we would say: "Equip, increase efficiency, reduce labor expense so far as possihle; produce to the limit."

We say this in face of the fact that we recently saw this statement, or practically this, so far as we can remember: "Money is cheap now; huy money with products; hold until the dollar returns to its fuli vaiue; then buy the wherewith to produce more." This may sound logical, hut the world was never advanced by such a doctrine. Besides, "when will the dollar return to full value?" We don't know.

THE FARMER GETS THE BLAME

About January 1919, congress started various and sundry investigations with the object in view of trimming H. C. L. They appointed various committees and suh-committees and are working hard and faithfully, yet H. C. L. continues to rise—AND THE FARMER GETS THE BLAME.

January hogs sold in Chicago around $22.00 per hundred. Today they are seiling from 25 to 30 per cent lower. yet hacon refuses to be coaxed off the top shelf—AND THE FARMER GETS THE BLAME.

Cattle bring the farmer about 75 per cent of the price they did in January, and the packers say they cannot sell the hides. Yesterday daily papers carried a news item stating shoes are to be $1 per pair higher —AND THE FARMER GETS THE BLAME.

Congres passed a law fixing the price of 1919 wheat at $2.26 per bushel—not to benefit the farmer but to keep the speculator from putting up the price of flour. Recently the newspapers announced an advance of one cent per loaf in San Francisco—AND THE FARMER GETS THE BLAME.

The price for wool for 1919 was fixed at 68 cents per pound, hut by the time it goes to the mill it costs $1.80 per pound—AND THE FARMER GETS THE BLAME.

We might go on down the line "From Soup to Nuts" and the answer would always be the same—THE FARMER GETS THE BLAME.

TRUCKS—ROADS

Trucks are constantly becoming a greater factor in the transportation of farm products, in fact so great that road builders are considering the necessity of protecting roads from overloaded heavy weight trucks. Some counties have already made most stringent regulations which have prevented fullest utiiization of the highways. Perhaps some of these regulations are not so wisely considered as they might he, but it goes without saying that we must have some regulations or else the foundation of our roads must he constructed along other lines than at present. Truck manufacturers have taken pride in advertising the capacity of their trucks and making it plain that the truck will stand up under heavier weights—ail of which is found to be true, but these extreme loads are cailing immediate attention to regulation.

The California Taxpayers Journal recently referred to investigations of R. M. Martin, Sacramento County Highway Engineer. This report shows that the use of trucks is advancing very rapidly. In 1917, 128,157 motor trucks were built. In 1918, 227,250 trucks were sold, and the production for the present year is estimated at 327,930. The trucks huilt this year will have a total tonnage capacity of 550,000 tons. Two hundred and seventy-one thousand, or 83 per cent, will be of the two ton size and less, and their capacity will be ahout 59½ per cent of the total truck capacity to he built. Trucks from two to four tons capacity will constitute 11 per cent of the numher, and 21 per cent of the total capacity. Trucks of five tons will constitute five per cent of the numher buiit and 16 per cent of the total capacity. Trucks to carry more than five tons will constitute one per cent of the number huilt and include only three per cent of the total capacity.

Farmers with iarge amounts of produce to move to market may regret to see rigid restrictions made, hut for their own preservation it will he best that reason prevail and that some regulation be made.

EVERYBODY RIDES

It is said that the seating capacity of the automobiles of the United States is 30,000,000 while the total seating capacity of the 55,705 railroad cars is but iittie more than 3,500,000. In war or in peace the auto has become our greatest force.

ARTIST FARMERS

While at the Southern California Fair at Riverside we saw a wonderful display of richiy colored apples from the foothill section of San Bernardino County. They were the kind of fruit of which there has never been sufficient produced to giut any market in the world. It is the kind of fruit for which people will deny themselves other necessities in order to have more. Two men were talking regarding this same exhibit. One of them remarked, "Only an artist can produce such fruit."

BRITISH LIFT THE BAN

As a matter of self protection Britain had placed an embargo on American fruits, or rather on the importation of all fruits for a period after the war. This embargo has finally been lifted and dried fruits may now be shipped to that country. This will make an immediate outlet for dried apricots and peaches, which it is expected will clear the market of any surplus.

AIRPLANE IN AGRICULTURE

The use of the airpiane in agriculture is increasing and airplane service is now a continuous performance over the rice fields of the Sacramento Valley. This is not for the purpose of discovering insect pest extension, as was the case with the boll weevil in the cotton fields, but with the intent of preventing depredations of wiid ducks. It proves effective but rather expensive, and airpiane construction has not yet arrived at a point of perfect safety. One of the Texas cotton patroi recently dropped to his death in the performance of his duty.

STOPPING BOLL WEEVIL

Arizona cotton growers are taking keen interest in a campaign to uproot and totaiiy eradicate the wild cotton which grows in the foothill canyons of the Santa Cataiina mountains near Tucson. This wild cotton is known to harhor the boll weevil and afford it opportunity to spread. The cotton industry is becoming one of Arizona's most important. The state entomologist is not supplied with sufficient funds to make the campaign effective, so individuai cotton growers, as well as supervisors of various counties, are uniting in voiuntary suhscriptions or appropriations to strengthen the arm of the state official. Arizona has learned the lesson of losses which may result from a hit of neglect in pest controi, and she has determined that the boil weevil shall have no welcome within her borders

First California International Livestock Show

By R. P. Royce

THERE is slight doubt of the truth that great institutions develop from small beginnings but such development requires time, and characteristic of the California spirit the promoters of the California International Livestock Show decided to take time by the forelock and stage the initial show on a scale seldom reached by similar shows of more maturity.

Aside from the attendance, there wasn't anything small about the San Francisco show. The extent, completeness and quality was nothing short of a real surprise, and visitors, especially those from the East, and there were many of them, found it difficult to realize that the show was the first of its kind. It was so well conceived, so balanced and so finished that it had all the earmarks of the older and larger livestock shows of the Middle West. It was not the greatest or largest livestock show ever held, but, as one distinguished Eastern visitor put it, "it was as large as it needed to be."

In allotting credit for the success of the show, the business interests of San Francisco who made the show possible by liberal financial backing, the breeders who made the show a fact by sending their herds and flocks, and Gordon H. True, the manager, and his assistants, who worked tirelessly for months, can lay claim to all credit.

The show was held in the California building on the P. P. I. E. grounds, and the fact that it was necessary to provide outside accommodations serves best to indicate the proportions of the show. The building, which by the way is being permitted to fall into a sad state of disrepair, was remodeled to suit the requirements of the show. A large arena for showing and judging, with a ring side seating capacity of over 5,000, was constructed in the east wing. The horse, cattle, sheep and swine stalls and pens were built in the main room. Other rooms contained the poultry and rabbit shows. Still others were used to house the varied commercial exhibits and the exhibits of the different organizations having to do with agriculture and animal husbandry. And in passing it may be said that the support tendered the show by the different organizations such as the college of agriculture, the department of agriculture, the Milk Producers' Association, the Dairy Council and others went far toward making the show a real educational institution.

And that is what the show is planned to be—an educational institution. It is not a money making proposition for San Francisco, it does not exist simply for the pleasure and profit of the breeders or for the entertainment of the San Francisco public, but it was planned to encourage the wider use of better livestock on the ranges and ranches of California. That the show did serve such a purpose well or that it will continue to there is not the slightest doubt. To date there has been no more effective agency developed calculated to hasten the general adoption of better livestock practices than the California International Livestock Show.

Beyond a doubt the outstanding feature of the show was the surprising quality found in all the classes and the extensive entries in the carload classes.

Class after class appeared in the arena that would do credit to any show and in a number of classes the quality ran so high as to bring forth enthusiastic appreciation from the judges, several of whom declared they had seen nothing better at any show this year. For instance, not to cite many examples, the class of aged Holstein cows was declared to be a stronger show than seen at the National Dairy Show and the fat classes were headed by a cross bred heifer, raised and shown by the University of California that is rated as perhaps the most remarkable seen at any American show. In referring to this heifer the judge remarked that he had never seen her equal and believed that she could win in any show ring.

With such quality produced in California, with the enthusiasm for better livestock that exists throughout the state and the inspiration born at this show, California livestock interests can view the future with the highest satisfaction and confidence.

Other features of the show that added much to its success were the meetings of the various livestock associations for the discussion of the problems affecting the industry and apparent broad-guaged appreciation of the common interest the show held for all.

The one big question asked by everyone during the week was, "Will the show be made permanent?" The Cultivator feels that there is just one possible answer—it will be made a permanent show. As to the ways and means for putting the show on a permanent basis, we do not speak with a definite notion, but there will be found a way. It is inevitable and logical that there will be an annual livestock show at San Francisco. If the backers of the first show fail to appreciate the importance of establishing such a show others will not. If San Francisco business men fail to catch the vision, then the livestock interests of the state will do for San Francisco what she fails to do for herself. San Francisco is great, not because of San Francisco, but because of the agricultural resources back of her. Any show held there will not be a San Francisco show, but will be a California show, and some way the right organization of wide-visioned, broad-guaged men will be found who will put the show across. In this connection it might be well to suggest that inasmuch as it requires the cooperation of livestock breeders to make such a show possible it might be well to give those interests a wider representation in the management. If such a plan was adopted it is certain that a more successful show could be held than otherwise. The livestock industry is a business peculiar to itself and a city business man rarely has the correct viewpoint.

If there were any rough places in the first show, they were small compared to the many and great obstacles that the management had to overcome. However, there was one very serious feature of the show that must be corrected before another year, if the 1920 show is held at the same location. Reference is made to the unsatisfactory transportation service to the show.

A feature of the show that proved one of the greatest attractions was the horse show held each night and Wednesday and Saturday afternoon. Astonishingly large classes — a few contained as many as 34 entries—were the rule.

All in all the first California International Livestock Show was above all expectations. It was a credit to every factor participating and in a most convincing manner pointed to a brilliant future for California and the Pacific Coast.

THE BEEF CATTLE

The best showing of beef cattle ever made in California best describes the showing made by the Shorthorns, Herefords and Aberdeen-Angus. Not only were the breeding classes the strongest ever seen in a California show ring, but the classes for fat stuff, both single and carload classes, were far ahead of any former show. The showing made in this division served to impress those not familiar with California conditions or the rapid progress made during the last few years, with the remarkable future this state is certain to attain as a breeding ground for the best beef cattle produced.

While the Shorthorn interests staged the larger show in the breeding classes, the Hereford camp pointed with pride and enthusiasm to the fact that, with one exception, the carload classes were Herefords, and in total number overshadowed all other breeds.

Each of the judges and many of the visitors from the East admitted their surprise at the quality of the show and stated that many of the classes were equal to those seen at the larger shows.

The Shorthorns

The show of Shorthorns was conceded by all to be the strongest yet made in this state. Eight of the top herds of the state furnished practically all of the competition, the herd of William Henn of Kansas City showing only in the bull classes. Four of the herds made their first show of the season and succeeded in changing the ratings of the herds that have been seen at the earlier shows.

Three aged bulls started the judging program on Tuesday. Hallwood Flash held his accustomed place at the head of his class but met a new contender in Crescent Dale, shown by H. M. Elberg. The latter bull was shown in excellent condition and is one of the smoothest, thickest bulls in the state, with a hide that handles like a glove, but he lacked the scale of the bull ahead and the judge faulted him somewhat on his head. Henn was third with Cumberland's Goods.

The two year old class was one looked forward to by Shortborn interests as this class brought out for the first time Gainsford Matchless, recently installed as one of the herd bulls in the Caledonia herd. Gainsford Matchless towered above his class. His extreme scale, his attractive front and head of character, his rare quality and thickness, his width and depth made him a marked bull from the first and there was slight question that he would be declared champion. Barring a tendency toward an easiness of top and a flank that needs to be let down a trifle the Caledonia bull can be rated one of the great bulls of the West. Pacheco Marshall stood second over Matchless Elite.

The senior yearling bulls staged one of the hottest fights of the show and caused the judge no little thinking. Roselawn Champion, junior champion at the 1918 state fair, showed for the first time against Bashan Augusta, junior champion at the 1919 state fair and the 1918 and 1919 Los Angeles shows. Both are whites and both are top bulls. The former is a massive, wide, deep youngster carrying considerably more condition than the Dibblee entry, but the judge preferred the head of the latter coupled with a wee bit stronger top and better handling, and despite the fact that he was worried as to the serviceability of the underpinning sent the Dibblee bull to the top. Dalmeny Count, shown by Pacheco, was placed third.

The five junior yearlings were led by a very attractive roan calf from the Miller herd. This youngster with a good head, level lines and even balance, only lacked condition to have been a strong contender for the junior championship. A stall mate, the white Orden's Sultan, was second over Cumberland's Gloster, shown by Bond. The Missouri calf, Lord Julian's Type, was fourth and Ormondale Radium was fifth.

Miller had things pretty much his own way with his two senior calves by Secret Stamp, taking first and second with Dibblee, Glide and Pacheco filling out the class as named.

The university calf, a low set sappy youngster, won over three other good juniors.

For the first time this season, Spicy Lady, owned by Glide, had competition in the aged cow class, but her sweet character, levelness, swoothness and quality won for her over the Ormondale entry.

The two year olds yielded top honors to Little Sweetheart, the sensational Glide heifer. In placing this class the judge paid the winner the compliment of wishing to see him line up with the two top two year olds of the East. Meadow View Village Girl fell handily into second place by virtue of her sweeter head, neater horn and smoother covering than Pacheco Lass 118th, whose scale carried her above the attractive Elberg entry.

The senior yearlings stood practically the same as at former shows, the light roan King's Countess standing above the three from the Dibblee herd.

Next to the senior yearling bull class, interest centered in the rating of the eight junior yearling heifers Rosie Mayflower, that recently sold for $2,200, defeated three daughters of Golden Goods, one a full sister to the grand champion. Glide was fifth.

While Pacheco held her usual place at the top in a class of nine seniors of very high order, Pacheco Doris won the junior class for Pacheco.

A feature of the Shorthorn show were the group classes. Never before in this state have as many high class herds made entries in the breeders classes. Two aged herds, five calf herds and six entries in the get of

Continued on Page 660.

Agricultural News Notes of the Pacific Coast

Northern California

Fresh eggs sold last week in San Francisco for $1 a dozen.

Lincoln, Placer County, shipped 18 cars of oranges this season.

The price paid for hops at Santa Rosa last week was 85 cents.

Yolo County will plant walnut trees along its 175 miles of improved highway.

Rice in Colusa and Glenn Counties is bringing $6.25, with extra good at $6.35.

Pleasanton, Alameda County, shipped 150 cars of beets to November 1.

No more grapes may be shipped east in box cars, owing to cold weather.

Oroville, Butte County, olive growers have disposed of their crop at $200 a ton.

Six cars of almonds, valued at $44,000, were recently shipped from Chico, Butte County.

Carloads of northern grapes sold in eastern markets last week from $2,500 to $3,500 each.

There are 200,000 bags of rice piled in the fields of Colusa County because of car shortage.

The celery acreage of Northern California is 3,200 acres, of which 3,000 are in the delta district.

Celery from the Walnut Grove district in Sacramento County is now going east in carload lots.

Shasta County supervisors have limited to ten tons the loads that may pass over wooden bridges.

J. C. Kelley of Livermore, Alameda County, sold 1,000 breeding ewes last week for $13 and $14 a head.

The output of the Oakdale Almond Growers Association in Stanislaus County was 13 carloads of nuts.

Northern California citrus shipments for this season were 244 cars of oranges and four cars of lemons.

Near Meridian, Sutter County, a 210 acre rice field averaged 61 sacks to the acre, nearly double the usual yield.

Up to November 1, the deciduous fruit shipments of the state totaled 25,091 cars, 2,000 more than on same date 1918.

Sacramento reports that the total deciduous fruits shipped eastward to date represent a value of more than $25,000,000.

The Schuckl cannery at Niles, Alameda County, turned out 3,000,000 cans of fruit the past season, making 125 carloads.

On the Natomas Company's 60,000 acre tract just north of Sacramento this year food crops produced are valued at $4,000,000.

A. B. Caldwell of Soulsbyville, Tuolumne County, has Winesap apple trees over 50 years old from which he picked 25 boxes to the tree.

Truckmen are quitting the northern rice fields rather than pay the state tax of $20 a ton on the capacity of their trucks. A truck shortage has resulted.

The highest contract price offered for the 1920 hop crop in the Sacramento Valley is 42 cents; three year contracts are offered at 34 cents a pound.

Central California

Porterville reports a labor surplus but orange picking may absorb it.

Fresno reports there is still a marked shortage of layer raisins.

The Bruml fig orchard at Cercs, Stanislaus County, sold for $1,000 an acre.

The Sierra Vista ranch near Delano, Kern County, sold last week for $700,000.

The first soldier settlement lands will be 8,000 acres near Delhi in Merced County.

Salinas will build a fruit and vegetable cannery paid for by popular subscriptions.

A Dinuba banker recently paid a $300 fine for speeding on Tulare County roads.

A trial plat of cotton at Alpaugh in Tulare County gave a net return of $90 an acre.

The first two cars of lemons from Central California left Porterville the last week in October.

The first picking of lemons in the Terra Bella district of Tulare County yielded 108 boxes to the acre.

The railroads have promised the Lodi section grape growers 100 cars a day to the end of the season.

The record price for alfalfa land in Merced County was reached last week when 40 acres sold for $500 an acre.

A shipment of 25,000 pounds of cantaloupe seed from Rockyford, Colorado, has reached Turlock, Merced County.

Independent buyers are offering $2.80 a box for new navels at the packing houses in Porterville, Tulare County.

The record price of $4,073 was received in Boston for a carload of Tokay grapes from Lodi, San Joaquin County.

At a farm auction near Turlock, Merced County, a grade Holstein cow brought $202.50 and eight cows averaged $141.25.

Fumigation of citrus orchards began in Tulare County July 2 and closed October 6, a total of 1887 acres being treated.

An auction sale of 269 hogs was held at Tulare last woek at which the top price was $14.85, an advance over late prices.

M. A. Boulware of Terra Bella, Tulare County, picked 9,400 picking boxes of Valencia oranges from his 40 acre orchard.

H. R. Leek of Alpaugh, Tulare County, harvested 30 tons of honey sorghum to the acre, some of which was 15 feet high.

Governor Stephens has appointed Mrs. Ellabeth Phillips of Porterville, Tulare County, to a place on the state board of education.

Pomegranates from Porterville brought a net return to the grower of more than six cents a pound. They were shipped to Chicago.

Fifty citizens of Earlimart, Tulare County, visited prospective sellers of lands to Japanese and all but one agreed to cancel the deals.

The Turlock and Delhi sections on the border line of Merced and Stanislaus Counties will grow a greatly increased acreage of sweet potatoes next year.

Southern California

There are more than 20,000 hives of bees in Ventura County.

Palo Verde, Imperial County, is to have a $50,000 gypsum mill.

The Anaheim walnut growers will creet a new packing house.

San Jacinto will have a new cannery before next season's fruit crop is ripe.

The Anaheim brewery will be turned into a citrus by-product plant.

Three boys at Santa Ana stole eight sacks of walnuts and sold them for $70.

A San Pedro firm contemplates erecting a fish cannery at the Salton Sea.

There are still 1,000 cars of Valencias to be shipped from Southern California.

San Diego reports 960 acres near the city in cucumbers, peas and winter vegetables.

Yucaipa, San Bernardino County, shipped 50,000 boxes of apples to November 1.

The Imperial County farm bureau is probing the cotton gin war now raging in the valley.

Walnut shipments, by reason of large crop and early rains, are very late this year.

The Coachella Valley will next season grow treble the usual acreage of Bermuda onions.

Cotton at Palo Verde, Imperial County, sold last week for the record price of 45 cents.

Gay Owen of Brawley, Imperial County, sold a hog last week that weighed 815 pounds.

More than 7,575 acres of lettuce have been contracted in the Imperial Valley for this winter.

Brawley growers are planting white bush squash and will protect them from frost with paper covers.

Orange County faces the problem of exterminating the Russian thistle and has a crew of destroyers out.

F. D. Young, government frost specialist, has arrived at Pomona for his third year's observation of frost fighting.

San Diego and Imperial Counties will celebrate the completion of the San Diego and Arizona Railway December 1-6.

After a course at the university farm at Davis, four Los Angeles boys purchased the 160 acre Moran farm at Tipton, Tulare County.

The Kirkpatrick Thompson Company of Riverside has grown 12,500 crates of sweet Spanish onions on the Santa Ana River bottom land.

The California Lima Bean Growers Association has adopted the names "California Seaside Lima Beans" and "Baby Limas" for their output.

There are 750 acres of celery in the El Monte district of Los Angeles County, 175 acres in Orange County, and 100 acres in other districts.

Green vegetables to the number of 276 carloads were shipped East from Southern California the last week in October, also eight cars to local points.

J. P. Hatzfield sold his ten acre Valencia orchard noar Placentia, Orange County, for $50,000, the record price for California. No residence is on the land.

The Coast and General

Fruits shipped from Yakima, Washington, this year totaled 29,400 cars.

Palmetto, Florida, is shipping 25 cars a week of Parson Brown oranges.

Growers in Marion County, Oregon, received over $100,000 for their apples.

Grapefruit is being harvested in the Salt River and Yuma Valleys of Arizona.

Skagit County, Washington, raised $600,000 worth of cabbage seed this year.

Hood River Valley in Oregon shipped over 2,000,000 boxes of apples in 1919.

Manitoba lost about 2,800,000 bushels of potatoes that were frozen in the ground.

The largest walnut orchard in Oregon is 100 acres, owned by Thomas Prince, Dundee.

Ranchers at Bend, Oregon, expect to ship 8,000 sacks of Netted Gem potatoes this season.

A recently organized company will plant 2,000 acres to vegetables near Auburn, Washington.

Forest fires near Lynden, Washington, destroyed many ranch buildings, livestock, machinery, etc.

Stock range conditions in Arizona and New Mexico, owing to heavy rains, are the best in many years.

Because of a shortage of workers the packers of Hood River Valley, Oregon, will conduct a packers school.

Districts in Oregon are short of range feed and hundreds of thousands of sheep have been shipped to winter ranges.

A mysterious disturbance in Diamond Lake, Klamath County, Oregon, killed thousands of fish and discolored the water.

The Hood River, Oregon Canning Company has more than doubled the capacity of its plant to care for next season's run.

John Brown of Sheridan, Oregon, picked 45 tons of loganberries from ten acres of land and sold them for eight cents a pound.

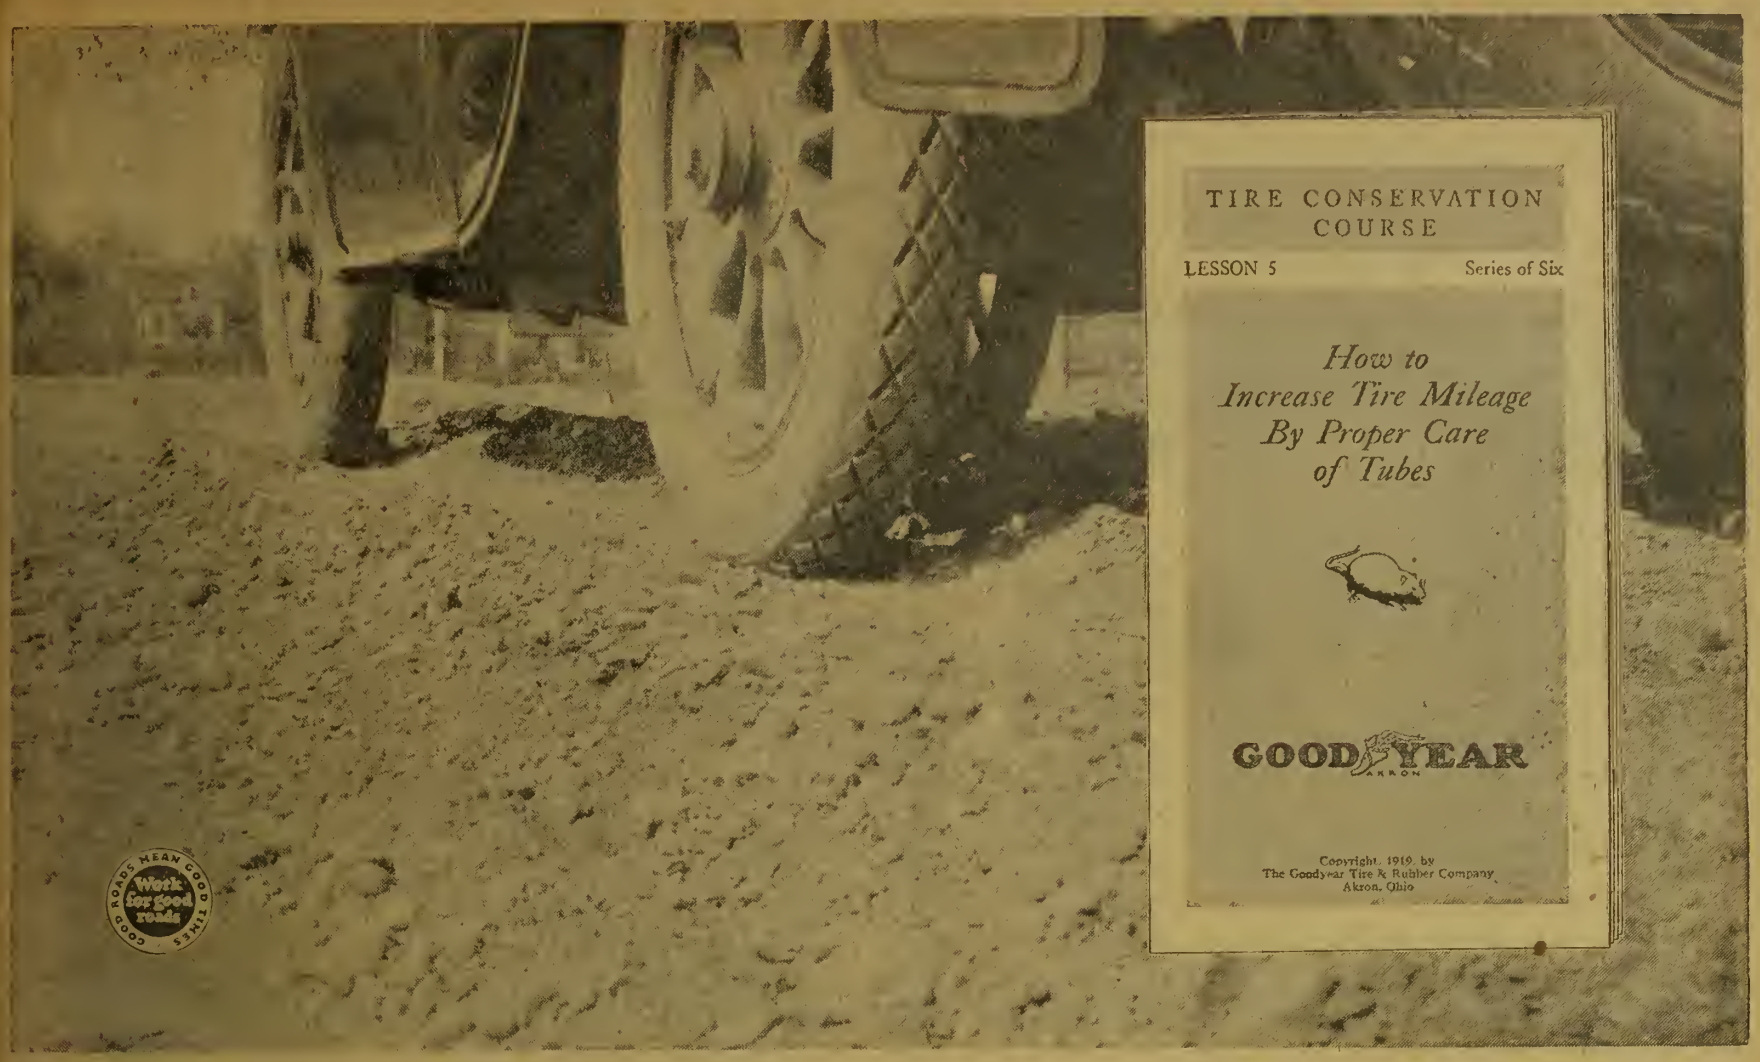
There were 2,169 bales of cotton ginned in Maricopa County, Arizona, to September 25, as against 498 bales for same period last year.

Shipments of oranges from the Salt River Valley of Arizona will begin about November 1. The shipments are expected to total 100 cars for the season.

Twenty years ago the eastern shore of Maryland shipped 200 cars of peaches. The "yellows" gradually reduced the crop until this year but one car was shipped.

Arizona cattle growers along the border of Utah and the cattle growers of southern Utah are said to be making war on the wild horses which are becoming a decided menace to the ranges.

Representatives of the California highway commission met recently at Phoenix with representatives of the Arizona highway commission and business men interested in a through road from San Diego to El Paso, to try to reach a plan agreeable to both state commissions and to the highway commissions of the several counties to be crossed.



TIRE CONSERVATION COURSE
LESSON 5 Series of Six
How to Increase Tire Mileage By Proper Care of Tubes
GOODYEAR
AKRON
Copyright, 1919, by The Goodyear Tire & Rubber Company, Akron, Ohio
GOOD ROADS MEAN GOOD TIRES
Work for good roads

A Few Hundred Yards May Cost 10,000 Miles

A MAN with a new car had one of his tires blow out. He didn t have a spare, so he decided to run a few hundred yards to a friend's house. When he got there he discovered that neither the tire nor the tube was worth repairing, for running on the rim had fractured the casing fabric. And the tube was riddled with holes caused by being pinched against the rim. Those few hundred yards of running on the rim probably cost him 10,000 miles—miles that could have been saved by properly caring for the tube. Proper care of tubes saves miles in many other ways—not only in emergencies, but all the time. Ask your Goodyear Service Station, or write to Akron, for Lesson 5 of the Goodyear Con ervation Course—telling how to increase tire mileages by proper care of tubes.

Repairing a tube with the Goodyear Tube Repair Kit

PROPER care of tubes increases by thousands of miles the life of even the best of tires. For whenever a tube fails, the casing is seriously damaged by being run flat.

Only a few hundred yards of such running may utterly spoil the tire; and even if the tube merely has a slow leak the tire will suffer the inevitable injuries due to under-inflation.

Take care of your tubes, if you wish to get the most from your tires.

Tubes inserted in the casing without being properly talced, either stick to the casing and tear because of the lack of French Talc or—when too much of this lubricant is used—they are injured because the talc collects in puddles and hardens.

Tubes must be properly inserted in the casing; otherwise they will be pinched against the rim, or—if the valve stem is at an angle—they may be torn.

Lesson 5 of the Goodyear Conservation Course gives simple but detailed directions for making your tubes serve your tires.

It also tells how tubes can be repaired permanently and in a few minutes with the Goodyear Tube Repair Kit.

Ask your Goodyear Service Station to show you one—and ask also for the other lessons of the Goodyear Conservation Course.

HAVE YOU SEEN IT?

The New

GRANT SIX

If by any chance you have not yet seen the *new* Grant Six, we suggest that you make a special effort *now* to see this car.

It has taken the country by storm. The factory has been literally flooded with orders since its announcement.

Recognition of the new Grant as a truly fine car, a car much better, much larger, much more powerful—and far more beautiful than people looked for at its price, was instantaneous.

Each mail brings new stories of appreciation. The long low lines of the New Grant Six body with sport model smartness and touring car roominess pleases everybody.

The quick, responsive motor which takes the car as fast as most men dare to go satisfies—thoroughly.

The beautiful body trim and complete equipment exceeds expectations.

The easy handling of the car, its short turning radius and its easy riding qualities over all kinds of roads always provoke favorable comment.

So does the clean cut sturdy chassis with its extra deep frame, its high grade transmission, its big, smooth operating clutch and its large strong axles of highest quality.

Thousands *have* seen it, but, if *you* haven't seen the new Grant Six plan to inspect it at your earliest opportunity.

You will than understand the keen enthusiasm of others for this car.

You will then understand why it is important for you to get your order in months ahead of your actual delivery requirements.

Live Farm Bureau Meeting

THE farm bureau gives evidence of becoming the most potent force in American agriculture. The war gave impetus to the movement, in fact, made it essential that the farm bureau or similar activity should bring the farms in closest touch with its prosecution. The farm bureau fulfilled its mission, but far from ended it, and while its activities have been somewhat decreased because of decreased appropriations, they have been taken up by the individual members and centers and county bureaus as never before.

One of the largest county farm bureaus in the United States is in Los Angeles County, and this is most fitting for Los Angeles County, as shown by the last census, was the greatest crop producing county in the United States. This bureau was one of the last to be organized in California, but its activities have more than justified its organization. Its semi annual meeting was held on the Santa Anita Rancho east of Pasadena on Wednesday of last week. Retiring President Volney H. Craig made report of the work of the delegates in forming a state organization and gave of his impressions as to the opportunity before the national organization which is being formed in Chicago this week. Mr. Craig was elected one of the delegates to this national organization and at last week's county meeting was made county representative in the state organization.

Adviser R. W. Hodgson made his annual report, and the importance of the work is slightly indicated by the fact that members of the staff traveled during the past year over 89,000 miles, mostly by auto. There were spent 1,102 days in field work and 3,416 office calls were answered. He stated that 1,900 farm calls were made and 431 meetings attended. There were 138 regular center meetings held and 153 demonstrations given.

J. B. Vail of San Dimas was elected president. Other officers are: Vice-president, Robt. H. Neely; second vice-president, H. S. Bissell; secretary, W. B. Rosecrans; treasurer, Ralph McNees; directors, A. W. Frye of Hynes, O. W. Maulsby of Whittier, Volney H. Craig of San Fernando, Grant A. Brown of El Monte and George P. Clements of Los Angeles. Mr. Vail presided at the meeting.

In addition to the regular business meeting of the bureau the farm home department, under the direction of Mrs. Jessica Hazard, held a business session, elected officers and discussed matters pertaining to the home.

At noon there was basket luncheon with coffee and doughnuts furnished by the farm bureau. Afterwards there was a livestock judging contest, and some of the classiest animals in California were supplied for this purpose by Mr. Taylor, manager of Mrs. Baldwin's ranch.

Amongst other addresses made was one by Carlyle Thorpe in which the present financial situation and the duty of the farmer was so clearly set forth that we quote:

A PRODUCER LOOKING FORWARD

By Carlyle Thorpe, Secretary-Manager California Walnut Growers Association

I'M GOING to talk to you folks briefly about a calamity that's about to befall this country. We seem to be facing a most serious shortage—not of coal, not of sugar, but of profiteers.

For profiteering the farmer gets the gold watch, the brown derby and the green bicycle. If we believe what we read in the papers or what most city folks tell us, the farmer as compared with the steel trust, the miners' union or the meat packers, makes a Sells-Floto three ring circus look like an indoor meeting of a childless mothers' club.

Still, I say we are facing a shortage of profiteers It hardly seems believable with all the golden opportunities at hand, so few of the city toilers fall for the "back to the soil" idea. But as long as I've started to address this millionaires' club with a weighty topic, maybe we'd better carry on and see if there is no solution for our present dilemma.

In the first place we'll all agree that there is no monopoly on farming. Most anyone who wants to try it, can. There are still millions of acres of good undeveloped land in America only awaiting tilling to make them productive, millions of such acres even here in California. Why, I personally know of some of the finest irrigated bean lands in the state that can be leased on the most favorable crop rental terms with an option to the tenant to buy at any time. Here is an opportunity that requires but little capital, still there are no takers. Thus, any man who is willing to work can easily find a good farming layout; the trouble seems to be that not enough of us care to do real work but on the other hand we are ready and willing to criticize the man who by hard work succeeds.

With the average man the idea is becoming prevalent in this country that he should work shorter hours and receive more money. That is a happy and popular thought with workers, but unfortunately the theory is all wrong. The facts are that a man must work long enough to produce as much as he and his family consume He is just breaking even then. If he expects to get ahead he must produce more than he consumes. The only way we can produce more and at the same time shorten hours of labor is through the employment of labor saving devices. Further inventions along these lines will tend greatly toward shorter hours of labor. This has already been done to a certain extent, so that we may ultimately expect to get on to a seven hour day or possibly a six hour day, but as yet the time for that has not arrived, the contention of the coal miners of this country to the contrary notwithstanding.

To illustrate my point, it has not

Boys! Win an Auto-Wheel

In This Interesting Contest

TO THE BOY who can think of the most interesting uses for the popular AUTO-WHEEL COASTER, for earning money and for play, we shall award one of our large m dels absolutely FREE. It's a mighty generous prize for a few minutes' work. And the following eleven valuable prizes will be given to those send.ng in the next best uses: **Camera, Camping Tent, Mess Kit, Scout Knife, Flastwing Steering Sled, Compass, Ingersoll Watch, Axe, Bank, Electric Flashlight, Poncho.**

INFORMATION ABOUT CONTEST

1. Any boy or girl not over 15 years may compete.
2. Contest will be judged by three men well-known in the Boy Scout organization.
3. Write to Business Idea Dept., Buffalo Sled Co., for pamphlet explaining the Contest, and colored catalog telling all about Anto-Wheel.
4. At end of letter write names of three Coaster Wagon Dealers in your town. If any carry the Auto-Wheel put an "x" after name.

YOU can do it. Here are a few pointers: The Anto-Wheel is a strong, speedy wagon for work or play. Has roller bearings, steel axles and tires, body of white ash, maple gear. See the Auto-Wheel dealer in your town for ideas.

CONTEST CLOSES NOVEMBER 30, 1919.

Buffalo Sled Co.,
178 Schenck Street,
N. Tonawanda, N. Y.

In Canada:

been many years since the country's grain was harvested with a scythe. Today the combined harvester, hauled by a tractor, displaces the labor of possibly 100 men. Still those of us operating farms have not a six hour day nor even an eight hour day. When work is to be done it is from daylight to dark, and a full season's labor and expenses may be entirely wiped out by unfortunate climatic conditions. Again, we must risk our season's operations and expenses on market conditions. We occasionally have to sell a bounteous crop at prices that do not return us the actual out of pocket cost of production. I can illustrate this point by telling you of my personal experience during the last two seasons. In 1918 I produced a fine crop of Lima beans on a 250 acre tract and sold them at a fancy price. Everything was rosy. This year on the same tract, through lack of sufficient rain and unfortunate weather conditions, I did not produce enough beans to harvest. I am plowing the whole crop under. Again, many growers of beans were unable to get them to warehouses in shape for delivery last year in time to obtain attractive prices. The market went to pieces and a large percentage of producers hardly received the cost of production for their product. Thus we find that farming is a hazardous business. It entails a lot of hard work and is constantly at the mercy of old Dame Nature and is affected favorably or unfavorably by the general market conditions. So when a producer is able now and then to take a fancy profit he certainly is entitled to it.

If, instead of accusing the farmer of profiteering, a larger percentage of our population would engage in agriculture, a greater production would naturally result and perhaps would slightly lower the level of prices but would also lower the average production cost, which in the end would mean greater prosperity and less agitation.

Over half the wealth of this nation is invested in farming. The value of farm property is over twice that of manufacturing, nearly three times as great as the capital invested in railroads and ten times as great as that invested in mines and quarries. Notwithstanding this the population of the United States is increasing about six per cent faster than the acreage of improved farm lands. If this ratio continues the price of farm products must continue to advance, for each acre of farm lands will be called upon to supply more people.

Again, the population of the United States is increasing at the rate of 21 per cent every ten years while the farm population is increasing at the rate of only six per cent every ten years and in the last analysis this means that the average farmer must produce enough for more people every year. If these conditions continue farm products and the price of farm lands must continue to advance indefinitely. The only way to check this trend is through the development of more acreage and inducing a larger percentage of our population to engage in the farming industry. If something along these lines cannot be accomplished we must eventually adopt a rationing system to prevent certain classes of people consuming more than their share of our farm products, in order to keep others from starving. We will not only see restrictions on the consumption of sugar and other essentials but on all articles which are basically products of the farm, including cotton and woolen goods. We cannot keep on consuming more than we produce. This rationing system may not be necessary for some time to come, but it is bound to develop as time accentuates the scarcity of farm products.

I think there is a solution for our short production difficulties. This solution lies in greater publicity. Public sentiment has always been the strongest factor in our national lives. The coal miners will not win in their strike because public sentiment is against them. The steel strikers have practically lost out for the same reason. If these labor organizations had taken the public into their confidence and through the press advocated the justice of their ideas, if there was any justice to them, there is hardly a

Curing Olives

HOME cured olives have a quality which is sometimes impossible to secure in those bought on the market. The question continually comes to the Cultivator as to best methods of home curing. There is slight variation in methods from year to year, so at the expense of repetition we give from an article written for the Cultivator last year by Prof. Cruess and printed in full in the issue of November 30. Practical suggestions by Prof. Cruess are:

Choose olives that are black, red, or have at least begun to show some pinkish or light red color. Overripe olives will be soft; underripe olives will be tough and tasteless. Pick them carefully, avoiding bruising. Shallow boxes are better than deep ones.

The olives should be pickled within two or three days after picking. If they are to be held for a week place them in a barrel or large pot and cover with cold water. Change the water daily. If they are to be kept longer than a week, make a brine of six ounces of salt per gallon of water and store the olives in this until they are to be pickled. They will keep several weeks in such a solution.

First Lye

Place olives in stoneware jars, in wooden open barrels or agate ware pots. Under no circumstances should a galvanized or tin container be used; poisoning might result from the solution of tin or zinc.

To make the lye solution first obtain a pound or two of Babbitt's Lye or Greenbank's Lye or Red Seal Lye or any other reliable brand from the grocer. For each gallon of lye solution to be made weigh out three ounces of lye. This corresponds to one pound of lye per five gallons of water. The writer has found it more convenient to make up this quantity rather than to try to weigh out three ounces of lye on the kitchen scale. Three ounces of lye is roughly five level tablespoons of dry granular lye. Use level tablespoon in measuring by this method.

When the lye is well dissolved and well mixed, pour it over the olives, covering them completely. Stir them every half hour in order that the lye may act evenly.

Leave them in the lye until the lye has penetrated about one-sixteenth of an inch into the flesh or until it has "cut" through the skins of all the olives. About once each half hour remove several olives and cut one or two with a sharp knife. The flesh will be turned yellowish or discolored to the depth to which the lye has penetrated. Under ordinary conditions three hours will be sufficient time; but the time will be shorter than this if the weather is hot or the solution is warm; and longer if the solution is cold. The lye should not be allowed to penetrate more than one-half the distance from the skin to the pit; one-fourth the way to the pit is the usual distance. Too deep penetration results in loss of color.

Exposure to Air

When the lye has penetrated pour off the lye solution. The lye may be saved and used for the second treatment. Leave the olives exposed in the air until they have assumed a good black color. Stir them at least twice each day. This can be done by pouring them from one jar or pot to another. Unless they are stirred frequently the color will be spotted. Usually three days will be sufficient time to permit coloring; some olives require less time; others may require four or five days.

Second Lye

When the olives have acquired the desired amount of color, prepare a lye solution of one and a half ounces of lye per gallon, that is one-half pound of lye per five gallons of water. Cover the olives with this solution. If one wishes to be economical with the lye, the lye used for the first treatment of the olives may be returned to them.

Allow the lye to remain upon the olives until the lye has reached the pits of the olives. This can be determined by removing a sample occasionally and cutting it to the pit. The progress of the lye will be evidenced by discoloring of the flesh. It will require about eight hours under ordinary conditions for the lye to reach the pit of the olives. If the lye does not reach the pits the olives will remain bitter; little harm will be done if the lye is left upon the olives several hours after it has reached the pits.

Removal of Lye

When the lye has reached the pits of the olives remove it and cover the olives with cold water. Stir the olives once every two or three hours during the day. Change the water at least twice each day; for example night and morning. Three changes per day will give better results. Continue this process until all of the lye has been removed. This will usually require about six or seven days. By tasting the olives once each day the final disappearance of the lye is easily determined.

Sterilizing

When all of the lye has been removed by the wash water the olives are ready for canning or putting up in jars.

Prepare a brine of five ounces of salt per gallon of water or of one pound of salt per three gallons of water.

Pack the olives into glass jars or wax top cans. Prepare the wash boiler sterilizer by placing a false wooden or wire screen bottom in it, adding three or four inches of water, and heating the water to nearly boiling.

Heat the brine to boiling and fill the jars or cans of olives with the boiling hot brine. Place the jars or cans in the boiler at once and cover them with scalded rubbers and caps. If wax top cans are used, simply place the tin caps on the cans but do not add wax. Heat the water in the boiler to boiling and then continue the boiling for one hour with the lid placed tightly on the boiler.

After one hour at the boiling point remove the jars or cans and seal them at once. If cans are used seal the caps with sealing wax as soon as they are removed from the sterilizer. The lids of Mason and glass top jars are tightened and the jars turned upside down to cool. Economy jars are left in an upright position, the only precaution necessary being to ascertain whether the lids are resting evenly upon the tops.

Storage: Store the olives in a dark closet or wrap the jars in several thicknesses of paper if they are stored in a light room. Light causes the color to fade.

Pickling Green Olives

Picking: Olives of the Sevillano (Queen) variety, because of their large size are preferred for green pickling. However, any variety can be used. The olives should be full size but still hard and green. Avoid bruising in picking.

Lye Treatment: Only one lye treatment is necessary for green olives. Prepare a lye solution of three ounces of lye per gallon of water. Place the olives in any sort of container at hand except one made of galvanized iron or of tin. Wooden containers or stoneware crocks are best.

Leave the lye upon the olives until it has reached the pits. This will usually require about 12 hours' treatment; for example, treatment over night. Cut several olives to be sure that the lye has penetrated to the pits. It will discolor the flesh of the olive to the depth penetrated.

Washing: When the lye has reached the pits place the olives in cold water and discard the lye. Change the water at least twice daily until all of the lye perceptible to the taste has been removed.

One week's washing in this way will usually be sufficient to remove the last trace of lye.

Brining and Fermentation: Prepare a brine consisting of nine ounces of salt per gallon of water. Place the olives in a wooden keg or if this is not on hand place them in glass top fruit jars. Fill the keg or jars with the brine and seal them. The containers should be filled to overflowing

Cletrac

TANK-TYPE TRACTOR

(Formerly known as the Cleveland Tractor)

No "Off Season" for the Cletrac

THERE is no "off season" for the Cletrac. It is a season 'round investment—paying you a steady interest 365 days in the year.

When it is not necessary in the fields, it never need be idle. For it is a master at belt work and knows no equal at dragging dead weight.

Grade with the Cletrac. Haul with the Cletrac. Use it to pull your logs and stone boats. Saw with it. Run the feed mill with it. Let it do *all* the work that you formerly did with your stationary engine and horses.

And then when it comes time for field work again remember that the Cletrac *does far more than merely plow.* It is the one tractor that successfully goes through with the *entire preparation of the seed bed*—plowing, harrowing, planting—*without* sinking in—*without* packing down the soft earth.

No power wasted

The Cletrac runs on metal tracks like a locomotive. No extra power is required to push it *through* the soil. It rides on its tracks *on top of the ground* and consequently most of the power goes *into drawbar pull* where it should go.

This track-laying, tank-type of construction permits the Cletrac to go over uneven ground, soft sandy soil, and even the muck of the Southern rice fields without slipping, sliding or floundering. It permits side hill work ordinarily considered dangerous for tractors.

It is ideal for orchard work

Because of its small size, its short turning radius and its power, the Cletrac has become the standard tractor among orchardists.

The Cletrac operates on a very small amount of distillate, kerosene or gasoline. It does *more* work, *more* days in the year and does it *better, cheaper* and *faster.*

Every Cletrac dealer is a service man. When you buy a Cletrac, you are assured of a service fully in keeping with the excellence of the machine—a service backed by The Cleveland Tractor Company itself—a service that is prompt, courteous, efficient and economical.

Order your Cletrac *now* for prompt delivery. Cash in on it *now.* Have it ready for field work when the time comes.

Write today for a copy of our interesting thirty-two page illustrated booklet "Selecting Your Tractor." It gives you in addition a rich fund of information on every phase of the tractor situation.

The Cleveland Tractor Co.

19007 Euclid Avenue **Cleveland, Ohio**

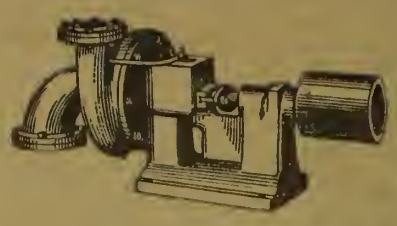
End Pump Troubles



—See how this Pump does it.

THE "Bean" Universal Pump—belt driven—eliminates pump troubles. It's a twenty-year development, the ultimate in centrifugal design.

Stuffing box troubles are minimized by a perfect water seal. The shaft where it enters the case is ever completely surrounded by a water bath.

The danger of loss of priming is minimized. And you don't have to cinch the packing down so tight that you cut the shaft.

We designed this pump especially to overcome these trouble sources.

Then we added all the other advantages in pumps that our experience of 20 years evolved.

The result is the perfect pump. Don't overlook it in making your selection.

Hundreds of men who have examined all kinds are putting in the "Bean." Let their decision guide you.

(Clip Out and Mail)

Automatic Water Balance

The "Bean" is provided with automatic water balance and an extra heavy outboard bearing which is oversize. It gives insurance against vibration. Belt changes are easily and quickly made.

It is strongly braced. An extra web of metal between sealing bowl and outboard bearing protects against excessive strain.

In fact, if you want the best pump of this type you have little choice, for that pump is the "Bean."

"Bean" Universal Pump—Belted

Send coupon for all the facts about this modern pump. Don't buy a pump until you know all the points wherein the "Bean" excels. That is the way to insure satisfaction when you buy a pump.

before sealing; air is detrimental to the color. In making green pickles we aim to keep the olives green in color; should we have air present or should we expose them to the air they will become gray or brown in color. The changes that give green olives their desirable flavor can only take place in the absence of air. Therefore there are two good reasons for excluding the air.

Store the olives for about two months before use. They will during that time develop a mild acid flavor characteristic of the green olive of commerce. No sterilization is necessary.

If a keg is used the olives should be transferred to bottles or jars after they have reached the proper flavor. Glass top and not Mason jars should be used because the brine and acid will act upon the zinc tops of Mason jars and cause the olives to absorb dangerous amounts of zinc.

Questions and Answers

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Tamworth Hogs

To settle an argument will you kindly tell the color of the Tamworth hog; also if it originated from the Duroc-Jersey?—Subscriber, Maxwell.

From "Types and Breeds of Farm Animals" by Plumb we quote:

"The native home of the Tamworth is the counties of Stafford, Leicester, Northampton and Warwick in central England, but notably in Stafford. * * * The ancestry of the Tamworth pig is obscure. Tradition and history refer to a pig of Tamworth type existing early in the last century. Most writers on the pig say but little of this breed and we know almost nothing of its early development. * * * The early type of Tamworth was long of leg and snout, narrow of back and shallow of body, slow to mature, very active and hardy, and usually of a sandy or reddish color."

According to the same authority Duroc-Jerseys or, rather, "the red or sandy colored pig," in America dates back many years. When pigs of this color were first imported is not recorded. The book quoted refers to the Guinea breed, to Berkshires which were sometimes red, to the Portuguese and Spanish Reds, to the Jersey Red, as all affording foundation for the Duroc. While some of these breeds were brought to America as early as 1804, the Jersey Reds do not seem to find a place in authentic history until the National Swine Breeders Convention in 1872. The Duroc Reds were established in Saratoga County, New York, as early as 1823.

Squirrel Poison

Will you please tell me the government formula for poisoning squirrels? Subscriber, Pomona.

The so-called government formula is given in our special pest control number of August 9, 1919. However. for those who have not filed that valuable number we reprint:

Barley (clean grain) 16 quarts; strychnine (powdered alkaloid), 1 ounce; bicarbonate of soda (baking powder), 1 ounce; thin starch paste, ¾ ounce; heavy corn syrup, ¼ pint; glycerin, 1 tablespoon; saccharin, 1-10 ounce. Mix thoroughly 1 ounce powdered strychnine and 1 ounce common baking soda. Sift this into ¾ pint of thin, hot starch paste and stir to a smooth, creamy mass. (The starch paste is made by dissolving 1 heaping tablespoon dry gloss starch in a little cold water which is then added to ¾ pint boiling water; boil and stir constantly until a clear thin paste is formed.) Add ¼ pint heavy corn syrup and 1 tablespoon glycerin and stir thoroughly. Add 1-10 ounce saccharin and stir thoroughly. Pour this mixture over 16 quarts of clean barley and mix well so that each grain is coated.

Resetting Orchard Trees

I want to move some 50 or 60 peach and apricot trees which were planted last February. They will only be moved about 300 feet. Will it be necessary to ball them? Will it set them back much? When is the best time to move them? How old a peach tree would it be practicable to move? When is the best time to prune peach and apricot trees?—Subscriber, Pasadena.

Ordinarily we would much prefer trees grown this past year and sent direct from the nursery, but with this year's scarcity and possible inability to have desired varieties at any price, it might prove advisable to attempt moving these trees. Wait until perfectly dormant, say early in January, then lift carefully, apply water to settle dirt about the roots as soon as possible. The best time to prune peach and apricot trees is late December to the first of March.

Stem End Rot

For the past three years our potatoes have been much affected with a dry rot at the stem. On digging now we find some have just a little dark spot around the steam while in many the whole end is covered with rot. We bought new seed last spring and planted in another field in April but they were no better. They have a fine flavor but there is such a loss.—Subscriber, Dobbins.

Apparently this is a case of stem rot, or sometimes called stem end rot, which is the fusarium or wilt disease. Unfortunately it is very difficult to control and about the only remedy is a long term crop rotation, at least four years rest of the soil from tubers and then a selection of absolutely clean seed. In planting watch every piece of seed to see that there is no indication whatever of this dry decay around the stem end. Where these potatoes have been grown the land should now be planted to crop other than potatoes or tomatoes and in four more years will probably be fitted for growing good healthy potato crop.

Lemon Extract

Is there a method of using lemon or orange peel which will take the place of extract for home use? —Subscriber, Chula Vista.

Lemon extract was one of the cheapest and best flavoring extracts to be had when alcohol was to be secured and when it had not been denatured. The peels were immersed in alcohol which dissolved the oil in the skin and made a perfet flavoring. We do not know whether there is any substitute for alcohol and ask our subscribers who may have experience to give us suggestions.

Warbles

I have a cow that has lumps on her back as big as walnuts. These lumps feel as though some sort of grub might be in them. Can you tell me what the trouble is and what I can do for it?—Subscriber. Van Nuys.

These lumps are caused by warbles. See article on another page of this issue.

Grubs In Lawns

I have a lawn which died out completely, though well watered. I found

that a large number of grubs, such as cut strawberry roots, had eaten off the grass roots, leaving a mass of dead grass and sod about three inches thick, which I could roll up by hand. Is there any remedy for this, as I am making a new seeding?—Subscriber, La Mesa.

These gruhs are the larvae of May beetles or June bugs and it is not advisable to reseed the lawn without first destroying them. As they are but a few inches below the surface, a stirring of the soil and killing of all grubs in sight would help much. A flock of any kind of poultry would be pleased to assist in harvesting the crop. Strawberry growers and others using infested land are forced to practice crop rotation, using crops grubs will not attack. Liming avails little or nothing. It is recommended that bisulphide of carbon or kerosene emulsion be used. The latter is diluted about ten times and poured over the soil before rainfall. If no rains come within a day or two a copious watering should be given to wash the emulsion down. This is used in some states and the Cultivator would be pleased to know if it has been found effective in California.

Oak Root Fungus

In further answer to query as to oak root fungus in Cultivator of October 25. page 549, Prof. Wm. T. Horne of the University of California writes:

I am in receipt of a letter from P. M. Paulson of the San Francisco Sulphur Company saying that one of your subscribers asks certain questions about the oak root fungus. "Is oak root fungus transferred where one is spading around fungus infested trees and later works up soil about a healthy tree? If foots are injured will fungus be transferred by the shovel? Is there any advantage in the control of the oak root fungus by the application of sulphur, carbon bisulphide, or other chemical?"

It is possihle that oak root fungus might be transferred hy spading in affected ground and then in unaffected ground. However, this could only take place if pieces of roots should be transferred with the soil sticking to the spade, since the oak root fungus does not live for long periods of time except in pieces of root or other wood lying in soil. It is possible, of course, that rhizomorphs of the fungus might be transferred in living condition in the soil and with ahundant moisture the fungus might grow out from these and become estahlished in pieces of root or other wood lying in ground in the new situation. If the spade or shovel is reasonahly well cleaned I think the danger of transferring the fungus will he small, since so far as we know no ahundant spore formation takes places in pieces in the ground. There is, of course, the possibility also of the soil sticking to the shoes of the workman and carrying with it pieces of roots or rhizomorphs. I think, however, that with reasonahle precautions this danger is very small. Unfortunately we have never been able to carry out careful experiments on the precise hehavior of rhizomorphs as to how long they live in the soil. It is certain, however, that they are quickly killed hy drying. So far as we know, there is no effect on the fungus by the application of sulphur. Carbon bisulphide may be used to kill the fungus, but our results with it thus far have not heen successful, owing to certain difficulties. Doubtless other chemicals may be used, but we have not made sufficient experiments to have this matter in hand. I think it probable that more can be done in some cases by removing the soil from the main root of tree and cleaning off the affected part of the root as would be done in any sort of tree surgery.

Apricot and Peach Crops

What are the returns from full bearing peach and apricot orchards?—Subscriber, Pasadena.

Leaving out the neglected orchards from which fruit is sometimes sold, the average return for apricots per acre is one ton of dried fruit, or 350 crates of fresh fruit, 30 pounds to the crate. In peaches the yield is about one ton dried or 400 boxes fresh to the acre. The price of course varies, though ton prices are steadier than box prices. The prices during the season just closed were: Apricots, fresh, $60 to $110 a ton; peaches, $60 to $90 a ton, but as high as $115 was paid for some extra choice Phillips and Tuscans by a few canneries.

Ant Poison

The daily papers have published as a news note the fact that sodium arsenite is being effectively used to kill the Argentine ant, and our readers are writing to know how it is used and where procured. The news items are misleading for sodium arsenite is but the killing agent in an ant poison into which several other ingredients enter. This was recently published in the issue of August 9, 1919, but is here reprinted for the benefit of those who did not keep this "pest fighting" number. This poison is also put up by some commercial houses and sells at about 60 cents a pound:

Prepare syrup of 15 pounds granulated sugar, seven pints water, one-fourth ounce tartaric acid (crystallized). Boil for 30 minutes. Allow to cool. Dissolve three-fourths ounce sodium arsenite (chemically pure) in one pint hot water. Cool. Add poison solution to syrup and stir well. Add to poisoned syrup one and one-half pounds honey. Mix thoroughly.

GOVERNMENT LAND FOR SALE

Six thousand acres of citrus land are to be sold at auction by the reclamation service at Yuma, Arizona, November 10. The sale hegins at ten o'clock in the morning. These lands are located on what is known as Yuma Mesa near the city of Yuma. The government will construct the necessary irrigation works and all necessary canals for the irrigation of these lands, the estimated cost of which is placed at $200 per acre, with $25 per acre added for the land, making the minimum bid $225 per acre. Address Reclamation Service, Yuma, Arizona, for further information.

FARM CENTER MEETING

Members of the Roosevelt farm center have invited other members of the farm bureau of the Antelope Valley to meet and picnic with them on the fair grounds at Lancaster, Saturday of this week. T. B. Tuohy is to be the chief coffee maker.

California's Cauliflower Crop

By Ernest Braunton

THE largest cauliflower crop in the world is grown in the lowland districts of Los Angeles and Orange Counties, of which there are 4,200 acres now in process of growth or harvesting. The next largest acreage is on Long Island, New York,, of just half the area of the local fields. California swings into the ring again for third place in 1,400 acres south of San Francisco, centering about Colma in San Mateo County. The fourth district in size is in northern New York, and about 40 acres in one district is grown near Roseburg, Oregon. Colorado, Illinois and Florida grow some but ship little.

R. G. Risser, crop expert for the California Vegetable Union, says that the biggest field of cauliflower in the world is that of Williams Bros., at Vegala, a station on the Santa Fe a few miles southeast of Los Angeles. There the present acreage is from 350-400, in one tract. The cauliflower industry is restricted to certain districts where the combination of soil and climate is favorable and only in cool, moist coastal districts is the crop a commercial success. It also requires as much skill and care to grow good cauliflower as it does the most exacting of plant life known to the truck farmer. The whole local industry is self-supporting and sufficient unto itself. The varieties grown were originated here and seeds are saved by each grower, that from other states being comparatively worthless.

The principal growers do not even trouble to name their varieties but they are known by seasonal names. There is a "Snowball" that is grown as an extra early for local consumption, but the acreage is quite limited. The shipping sorts are divided into three seasons; two or three strains are used for the early, followed by the half-early or intermediate, and then comes the late. For the late season some of the growers have substituted broccoli, a late and hardy variety and the one principally grown in the Colma district. All these have been selected as to the season of flowering, with the main points of excellence a tall foliage to protect the head and a close compact deep flower head. Some of the poor varieties have but an inch veneer of flower and these are discarded from the shipping, to be used in other ways.

The present season is an especially good one for the California grower, the Long Island crop being a failure, due chiefly to too much rain. This crop interfered only with the early shipments from local points, being marketed in November and the first part of December or until a heavy freeze. California ships not only cauliflower but a variety of fresh vegetables throughout the winter. Our caulliflower usually follows the Long Island crop on the Eastern markets. As to yield the local fields run 300-400 crates to the acre and the standard is a dozen heads to a crate, though the range in size is from 8-16 per crate. The price paid to the largest local producer last season averaged 90 cents a dozen.

MORE AND BETTER POTATOES

Continued from Page 643

ment, as had the application of muriates and sulphates. Mr. Hodgson also referred to the beneficial results which should accrue because of the work of Mr. Shear of the state department of agriculture in seed certification.

Nevada Method

H. A. Hyde of Watsonville, a practical and life long planter and grower of potatoes, also a dealer in potato seed, referred to the fact that the potato grower wanted not only seed which would germinate and grow, but "seed which has the pep." He maintained there was all the difference in the world, as there is in animals and in humans, in the way potatoes would grow and flourish or, again, show most indifferent results. He referred to a method of seed production in Nevada as followed at the present time of growing the potatoes until little more than a third or a fourth grown, then digging, curing and ripening and planting the seed whole. Spring planted seed are sometimes caught by cold wet weather at planting time. Cut seed is almost sure to rot. The small whole seed which he described is much more resistant to decay and gives a far better stand.

Mr. Hyde referred to one of the newer potatoes, Earliest of All, a 70 day potato, which is doing exceptionally well in the northern part of the state. One method of sprouting followed in the Watsonville section is to place in crates in shade.

Certified Seed Growers

George Peters, Kern County's certified seed grower, made appeal for better seed, for certified seed, in fact for a certified seed growers association. His talk was so forceful that it resulted in appointment of committees and ultimately in the formation of an association of which he was elected president.

Other talks were made by Messrs Ryan, Young, Risser, Milbrath, Olsen

In addition to the association of seed growers it was suggested that the industry was sufficiently important that in the farm bureau work in every county in which potato growing is an important industry there should be an affiliating organization which should devote its energies to bettering the potato industry.

After the luncheon and its short conference the ranch of J. B. Radcliff at Burbank was visited. The potatoes here were much riper than those in the San Gabriel Valley. They were the St. Louis Rose, the seed which was used being secured from the last spring's planting. These potatoes had already been nipped by the frost. They were remarkably even in size.

A few miles farther in the San Fernando Valley was the ranch of J. L Olsen near Van Nuys. His place was planted with hill selected seed from the spring planting. His favorite varieties were White Rose, Scottish Chief and Harvest King.

As to the number of potatoes desired in the hill Mr. Olsen said that much depended upon the soil fertility. For the general planter a seed which would grow a plant setting a great number of potatoes is not to be preferred. This for the reason that until soil fertility is built up to a point where it will mature a good sized potato partial failure will result from planting such seed. Mr Olsen made especially emphatic the statement that soil fertility is a matter of building and not simply of trying to place commercial fertilizers in the furrow at seed planting time The most practical soil builder for the potato grower is the green manure crop.

The last place visited was that of George Nadeau, also near Van Nuys His varieties and crop conditions were almost identical with those of Mr. Olsen.

LADYBIRD DOES EXCELLENT WORK IN FLORIDA

Superintendent Harry S. Smith of the state insectary is in receipt of a letter from Prof. J. R. Watson, entomologist of the Florida experiment station, from which the following is quoted:

"You will be interested to know that Delphastus catallnae has been doing excellent work in the original grove where it was introduced and also in many of the groves where it was introduced only this summer. We have sent out this summer in the neighborhood of 600 colonies to different parts of the state."

This ladybird was sent to Florida by Superintendent Smith in 1915 for use against the citrus whitefly. Evidently it is becoming of considerable importance as an enemy of this pest

Champion

Dependable Priming Plugs

Equip Your Engine So It Sure-Fires When Cold

CHAMPION Dependable Priming Plugs sure-fire cold motors because, with the priming cup right in the plug, the gasoline trickles down the core of the plug and drips from the sparking point where the spark jumps and is the hottest.

They are imperative in cold weather for the hundreds of thousands of cars that do not have priming cups, and are infinitely better for those that do, because priming cups let the gas in too far from the spark plug. Every car can be easily equipped with these plugs in a few minutes.

Price $1.50 each.

VARIETIES IMMUNE TO POTATO WART DISEASE

Prof. James G. Sanders of the Pennsylvania bureau of plant industry has returned recently from an inspection trip to Great Britain and Ireland under commission from the federal horticultural board at Washington. Regarding the potato wart disease he writes to Director Hecke of the state department of agriculture:

"You will be interested to know that we have uncovered this disease in four places in one of our western counties in the bituminous coal region, and three points in other counties close at hand; also at two points in West Virginia it has been discovered by United States inspectors. Looking at this matter from a broad standpoint, it behooves us to secure immune varieteis in sufficient quantity so that seed may be available for everyone in infected and adjacent territory. I am securing from England by special permission of the federal board a ton each of the best immune varieties and smaller quantities of ten other varieties for test of productiveness under our climatic conditions. We also have found in experiments that several of our American varieties are immune, happily including the well known Irish Cobbler.

"Another interesting matter which I determined while in Ireland: I found a variety of potato which had been taken to Ireland by a returned Irishman from Montana. This potato grown in infected soil in Ireland proved immune. The specimens which I brought back with me have turned out to be the Idaho Rural, as determined by Prof. William Stuart of Washington, and this adds another to our list of immune varieties of agricultural value."

TOMATO AND THE MOTOR TRUCK

By Ernest Braunton

That the hauling of farm products by motor truck has changed the varieties grown is a statement that needs explanation, but is a fact nevertheless. In years gone by all soft fruits had to be "good shippers," for they were handled many times from producer to packer, and many vexatious delays occurred. Railroads had other commodities, and merchandise to haul and delays from freight congestion, car shortage, wrecks and strikes had to be considered in the handling of perishable products. But now the motor truck is on hand and it has one specific duty to perform—to haul to market the load it goes after.

With a minimum of time, handling and shaking up, the most perishable fruit is now sent to market when it is ripe, and not before. All credit to the motor truck and California's good roads system.

In quest of information as to the varieties of tomatoes most in demand by the canneries the writer visited the Los Angeles plant of the California Packing Corporation, which is now running largely on tomatoes. E. J. Ketterman, the superintendent, said: "In years past we have contracted almost entirely for the Stone, for it is a spdendid shipper, none better. But this year we had our acreage put in one-half of Stone and one-half of the San Jose Canner, a splendid variety developed from the old-time Trophy. It is not a shipping tomato like the Stone, but is unrivalled as a home canner. I believe it to be the coming tomato and we shall go into it heavier next year, for through careful seed selection, it is being improved each year. So far the Stone has been the smoothest but the San Jose is fast catching up to it on this point and is a better tomato on some other points."

This plant handles 7,500 tons of tomatoes each season, and this is packing house No. 19, all of the plants using the same varieties. The total amount used is grown not far from Los Angeles—from Chatsworth Park on the west to Fontana on the east and Downey on the south, while Van Nuys, El Monte and intermediate points contribute heavily. The season is just now at its height, for it commences about August 15 and closes generally about the first of December. In frostless autumns the run is up to Christmas, but the tomato season, like that of its near relative, the pepper, is terminated by Jack Frost.

For Nine Years

K-W equipped tractors have been increasing crop production and lowering crop costs.

Keep in mind when buying a tractor that upon the ignition system depends the performance of the motor, and no engine, however perfect, can deliver its maximum power UNLESS the spark from the magneto is hot enough to produce INSTANT and COMPLETE combustion of the carbureted gas within the cylinder.

K-W Magnetos are designed FOR TRACTORS and have made their reputation for reliability IN TRACTOR SERVICE all over the world. They produce the hottest known spark for ignition.

If you are not familiar with the K-W, ask some neighbor who is using one. He can tell you from his own experience, which will in turn show YOU why SEVEN out of every TEN tractors made use the K W Magneto as standard equipment.

List of K W equipped tractors and catalogs sent upon request.

Prince Walker Cornucopia

The Highest Record Son of Prince Gelsche Walker

His dam ALBA SADIE CORNUCOPIA CREETA has just completed official records of 36.26 pounds butter from 516.7 pounds milk in seven days. Her previous records were as follows:

At seven years—
Milk 328 days 18,849.40
Butter 866.28
At six years—
Butter seven days 24.13
Milk 522.40
At five years—
Butter seven days 28.85

She is a daughter of Sir Sadie Cornucopia, son of the first 30 pound cow, Sadie Vale Concordia

Over 66 of our best females are bred to PRINCE WALKER CORNUCOPIA, and he will be given the fullest opportunity in this herd. Put one of his young sons at the head of your herd.

Anchorage Farm, Orland, is particularly well pleased over the winning hy Berkshires of the first prize carload for heavy packer hogs and grand champion carload over all breeds competing at the California International Livestock Show, as the load was sired by a son of their premier sire, Star Leader.

Harvey M. Berglund, Dixon, one of the younger breeders of Duroc-Jersey swine, was one of the exhibitors at the California International Livestock Show and with no fitting succeeded in landing his herd boar in second place. Mr. Berglund reports the sale of a junior yearling boar to Dorman T. Bennitt, Willitts, a spring boar to A. Alcese, San Francisco, and two bred gilts to Wm. Collins, Dixon.

One of the recent importations that is attracting the attention of breeders of Duroc-Jersey swine is that of F. M. Johnson, Napa. Mr. Johnson attended the National Swine Show, Des Moines, Iowa, and later visited a number of the leading Eastern herds. The main object of the trip was the personal selection of a number of animals for his breeding herd maintained on his ranch near Napa. Included in his purchases were nine gilts by Pathfinder's Likeness, the 1918 grand champion boar at Iowa state fair; six granddaughters of Great Orion, the 1918 grand champion at National Swine Show, one hy Pathfinder, and 17 young sows of Pathfinder, Sensation and Great Wonder blood lines. To secure proper matings and correct type he selected a senior boar pig hy Great Sensation, a spring pig by Pathfinder and the large massive boar, King Orion Jr., that was first in class, senior champion and grand champion at the California International Livestock Show and was the outstanding individual of the Duroc-Jersey show.

Now that the Conejo Ranch Durocs and Hampshires are again settled down at breeding headquarters at Newbury Park it is of interest to note their successes in the show ring at the big fairs where exhibited. These combined herds came home from three shows with a grand total of 142 ribbons to their credit, including 13 championships from Los Angeles and San Francisco alone. They showed the grand champion Hampshire sow at Los Angeles and the grand champion Duroc sow at San Francisco. They secured first prize get of sire and first prize produce of dam for both breeds at both the above big shows. The Conejo exhibit was made under the direction of H. H. Braly as general manager and Geo. F. Waltemeyer as manager of swine department. These herds are open to inspection at the ranch by the visiting public any and every day in the year. A fine herd of registered Hereford cattle is likewise to he seen at the ranch.

If there is one man in Holstein circles in the south end of the state who stands in closer touch with the broader interests of the breed than another that man is no doubt Geo. M. Brown of Burr Farm, Los Angeles. Brown is familiar with the rank and file of Holstein breeders up and down the Pacific coast, and the splendid collection of Holstein cattle at Burr Farm today constitutes a concrete demonstration of the good to result from rubbing elbows with leading breeders at the big shows, at public sales, as well as at the various breeding ranches, both large and small. Everybody is more or less familiar with the rating of the great sire Sir Veeman Korndyke Pontiac at head of Burr Farm herd, but it is not so generally known that there are scores of high class females here in keeping with so great a sire.

At the recent Los Angeles Livestock Show, where were shown 14 animals from this herd, there were 15 winnings to their credit. These included grand champion cow, reserve grand champion cow, first prize aged cow, first prize three year old cow, first prize senior yearling heifer, as well as senior champion, reserve senior champion and junior champion in females, and a half dozen other prizes lower down the scale. It goes without saying that the young bulls to he offered from so great a breeding ranch are of a character to build up the dairy interests of all communities where they may go, and it should be understood first and all the time that the Burr Farm Holsteins are a working herd of high class registered Holsteins under a management whose aim is to solve the problem of economical production in the dairy world.

Hewitt Bros., Van Nuys, are showing visitors a litter of young Durocs sired hy the noted Winsor's Giant Orion. These fine pigs are out of a big senior yearling daughter of Great Model, and they give promise of extraordinary merit in matters of size and genuine Duroc character.

L. R. Hitchcock, Van Nuys, has succeeded in developing a string of 14 big young Duroc-Jersey sows that are one of the attractions in San Fernando swine circles. They are of Orion's King Gano and California Orion Cherry King blood lines.

Tom M. Bodger is owner of a fine herd of registered Hampshire swine at Gardena. While Mr. Bodger is not a professional showman he certainly turns out the genuine type of Hampshires. He has more than 40 September pigs flourishing in the right way, averaging eight to the litter raised and showing better than 90 per cent perfect helts. Sires in service are Billiken by Director, a fine big three year old, and Uneeda Harvester by The Harvester, an excellent two year old hog. A great brood sow in any man's herd is Twilight Pearl, a two year old daughter of Director, and she has six September pigs hy Uneeda Harvester that are perfect Hampshires. Senta is a Goldmine sow with a farrowing record of 40 pigs in her four litters. Opal is a daughter of Draper Lad from the Underhill herd with 11 pigs at side hy O. U. R. Aristocrat—showing ten perfect helts. Pansy Blossom is a Lookout Cherokee sow with nine Septemher heauties by Billiken.

Herefords Set New Record

The third annual sale of Herefords held by members of the Pacific Coast Hereford Breeders' Association at the California International Livestock Show set a new mark for the breed and reflected the keen demand that exists in this state for Hereford cattle.

The offering had been selected with great care; many prize winning animals were listed and the lot were presented in excellent condition. Thirty-three head of females and bulls were sold to 17 buyers, many making their first purchases, for an average of $711, a new record for the breed on this coast. Nine head sold for $1,000 or more, with a top of $1,475 for the three year old, Miss Dale, consigned by the Hereford Corporation of Wyoming, Cheyenne, and purchased by Wm. Briggs of Dixon. Briggs, who is laying in a foundation herd, was the

heaviest buyer, taking four head from the Wyoming herd for an average of $1,118 and two from the Cazier consignment at $1,100 and $925. The Cazier consignment of six head averaged over $1,000.

H. H. Gable of Esparto selected five of the top females at an average of near $1,000. J. A. Bunting drew one of the choice lots in Lady Ranier at $1,050.

The real bargains of the sale were the bulls. A particularly strong lot were offered, but buyers were lacking. W. D. Duke of Gazelle picked a juicy bargain when Nevada Lad 8th fell to his bid of $660. Bunting made a sacrifice when he sold California Prince Donald, grand champion at the 1918 state fair, for $700. Sonoma, the five year old bull formerly at the head of the Rule herd, was only able to make $525. not half his value.

The consignors and the association were highly pleased and regarded the sale as a fitting triumph for the splendid showing made during the week.

Col. Earl Gartin was auctioneer and John A. Bunting and H. E. Allen, who represented the American Hereford Breeders' Association, were in the ring.

The sale was managed by C. L. Hughes of the California Breeders' Sales and Pedigree Company, Sacramento, with the usual high class rendered by that organization.

The complete report follows:

J. H. Cazier & Sons Consignment

FEMALES

21, Isis 2d, October, 1917; Wm. Briggs, Dixon. $1100.
22, Standard Eyes 2d, May, 1918; H. H. Gable, Esparto, $1225.
23, Cleo 4th, June, 1917; H. H. Gable, $1000.
24, Venetia 2d, October, 1917; H. H. Gable. $1100.
34, Substitute; Wm. Briggs. $925.

BULLS

25, Nevada Lad 8th, October, 1917; W. D. Duke, Gazelle. $660.

Hereford Corporation of Wyoming Consignment

FEMALES

30, Miss Dale, February, 1916; Wm. Briggs. $1475.
31, Miss Dare 10th, February, 1918; Wm. Briggs. $800.
32, Miss Dare 11th, February, 1918; Wm. Briggs. $1175.
33, Miss Era 14th, September, 1918; Wm. Briggs. $1025.

J. A. Bunting Consignment

FEMALES

6, Calls Randolph, March, 1917; Moulton Warner, Cool. $650.
7, Lady Jane, September, 1917; H. H. Gable. $1050.
8, Melba Cook, January, 1918; Beatrice Bemmerly, Woodland, $775.

BULLS

5, California Prince Donald, February, 1917; La Honda Stock Farm, La Honda, $700.

Wm. Bemmerly Consignment

FEMALES

26, Marian C. P., May, 1914; Chas. Rule, Duncan's Mills. $775.
27, Eva S., December, 1913; F. G. McCollough, Dunningan. $650.
28, Miss Friday Alamo, March, 1917; W. S. Waiters, Healdsburg. $775.

BULLS

24, Nevada Lad 2d, September, 1917; Miller & Lux, San Francisco. $500.

H. M. Barngrover Consignment

FEMALES

9, Lady Ranier, May, 1916; J. A. Bunting, Mission San Jose, $1050.
10, Lue Clark, May, 1916; Moulton Warner, $575.
11, Golightly 9th, March, 1917; P. M. Snyder, Los Molinos. $500.
12, Normalene, August, 1918; H. H. Gable. $575.

BULLS

13, Gracioso, January, 1918; Miller & Lux. $425.

FEMALES

14, Sally Clark, February, 1917; Wm. Bemmerly. $925.
15, Lady Amethyst, May, 1913; H. M. Barngrover. $225.
16, Lady Berendo 208th, March, 1910; Howard Tilton, Madrone, $200.
17, Mabel Lass 4th, February, 1917; Moulton Warner. $250.
18, Elma Oregon, February, 1917; H. M. Barngrover. $450.
19, Hylas Randolph, March, 1917; Moulton Warner. $300.

BULLS

20, Witchford, June, 1917; L. F. Buchetto, Oakdale. $475.

Shorthorn Sale a Bargain Event

The third annual sale of Shorthorns held under the auspices of the California Shorthorn Breeders' Association at San Francisco, during the livestock show, proved to be a bargain day for the buyers. Thirty head of cows, heifers and bulls sold for a general average of $487.50, a price that fell short of representing the real value of the offering. If the consignors were disappointed in the prices, they were pleased with the number of new buyers making their start with the red, white and roans.

Marked preference was shown for Scotch breeding and animals with attractive pedigrees were eagerly snapped up.

The top of the sale was $1,000 paid by Geo. E. Dierssen of Sacramento for the choicely bred Marr Missie Willowbrook Maid, bred to Gainsford Matchless, grand champion bull of the show. Dierssen also selected the Campbell Mina heifer, Caledonia Purity, at $675.

The Edinger-Johnston Company, Hood, who are establishing a high class herd, selected a number of the top females, and made a particularly good purchase in the richly bred white senior bull calf, Milman Stamp, at $825. The Fair Oaks Ranch, Willits, paid the top price for bulls when they took Orden's Sultan, a junior yearling, at $900.

Gardiner Pierce of Davis made his start by taking two females at bargain prices.

Geo. J. Meister of Sacramento, a new breeder, added a number of good ones to his herd. The Warm Creek Land & Livestock Company of Wells, Nevada, offered competition on the better things. Mrs. T. S. Glide of Davis bought two females.

Col. Earl Garten of Indiana served as auctioneer and Col. Ord L. Leachman of Sacramento worked the ring.

Frank D. Tomson, editor of The Shorthorn in America, and one of the leading authorities of the breed, was in the box and aided the sale by advice. B. O. Cowan, formerly assistant secretary of the American Shorthorn Breeders' Association, also rendered valuable assistance by his timely remarks.

A detailed report follows:

Caledonia Farms' Consignment

FEMALES

1, Ramona Miss, January, 1914; W. O. Bassingame, Fresno, $370.
2, Caledonia Glen, November, 1918; T. S. Glide, Davis, $210.
4, Caledonia Purity, Spetember, 1918; Geo. E. Dierssen, Sacramento, $675.
5, Glenbessie 2d, January, 1916; W. O. Bassingame, $350.
7, Signet's Memory 6th, December, 1914; Edinger-Johnston Co., Hood. $325.
9, Fayette's Heiress 2d, January, 1918; G. J. Meister, Sacramento. $300.
11, Caledonia Princess, September, 1918; T. T. Miller, Hollister. $230.
13, Winsome Memory 4th, September, 1917; Mrs. T. S. Glide, Davis. $400.
15, Winsome Memory 5th, September, 1917; J. F. Dunne, Gilroy. $425.
17, Willowhook Maid, October, 1917; Geo. E. Dierssen. $1000.
18, Lady Champion 3rd, September, 1917. $650.
22, Champion's Penelope, April 1917; G. J. Meister. $380.
25, Paicines Nora, January, 1912; G. J. Meister. $600.
27, Signet's Memory 8th, January, 1915; Gardiner Pierce, Davis. $400.

BULLS

30, Spicy Champion 2d, December, 1916; A. B. Kohn, San Francisco. $635.

T. T. Miller Consignment

FEMALES

12, Crimson Bud, February, 1918; Warm Creek Land Livestock Co., Wells, Nev. $700.
21, Milmar Star, October, 1918; J. F. Dunne. $250.

BULLS

29, Milmar Stamp, October, 1918; Edinger-Johnston Co. $825.
32, Orden's Sultan, March, 1918; Fair Oaks Ranch, Willitts. $900.

Ormondale Ranch Consignment

FEMALES

6, Orange Crust 5th, December, 1918; Mrs. T. S. Glide, $375.
10, Ormondale Bud, November, 1918; Edinger-Johnston Co. $385.
14, Roselawn Bud 86th, April, 1914; Gardiner Pierce. $620.

26, Ormondale Beauty, May, 1916; Murphy Estate, Brentwood. $610.

Burr Farm Registered Holsteins

Sir Veeman Korndkye Pontiac 156051

Bred for Milk and Butter Production

The Notable Sire Sir Veeman Korndyke Pontiac at head of this herd

BUY BULL WHILE YOUNG

The oldest bull calf at Burr Farm today is under 6 months. We have plan that sells them young. Four bull calves by Sir Veeman Korndyke Pontiac, and out of tested dams, now offered.

No. 1—From a 22.03 lb. three year old, milked up to 87 lbs. per day; 2000 pounds 30 days.
No. 2—From a 16.60 lb. two year old, that milked 62 lbs. per day; 1800 lbs. 30 days.
No. 3—From a two year old with 14.97 lbs. milk in seven days.
No. 4—From an 18.98 lb. cow.
Write us now about our young bull prospects.

He has 3 A. R. O. daughters to his credit. No less than 40 of his daughters were retained in one of the leading breeding herds in the San Joaquin Valley.

The owners of Burr Farm Holsteins are charter members of Los Angeles County Cow Testing Association.

Burr Farm Holsteins are a real factor in the commercial milk supply for the city of Los Angeles.

The high standard of merit set up in the founding of Burr Farm Holsteins redounds to the credit of the herd 365 days in the year.

High Class Matrons in Herd

There are not simply one, two, three, a half dozen, nor a dozen great producing cows at Burr Farm—they are numbered by the score. This is why it is safe to buy a young bull at Burr Farm on our plan that sells them while young.

Young bulls sired by Veeman Korndyke Pontiac are now in use from Humboldt County to Imperial County—the entire length of the state.

BURR FARM is Located at E. 26th Street and Downey Road **LOS ANGELES**

MAKES HENS LAY

LACTEIN

CONDENSED BUTTERMILK

FOR HOGS AND POULTRY

MAKES HOGS PAY

BUTTERMILK IS NATURE'S FOOD AND TONIC

Lactein is pure buttermilk as it comes from the churn, pasteurized, super-soured and condensed. It contains all the health giving food and tonic values of the original buttermilk without the useless bulk of water. On account of its high lactic acid content it will keep almost indefinitely.

Lactein is now recognized as one of the most necessary food digestive agents known for both growing hogs and poultry, due to the large amount of lactic acid it contains. The lactic acid aids digestion and assimilation, causing the hog or fowl to digest all the good from the grains given them to eat, and to eliminate all the dead and diseased matter from the digestive organs thereby promoting growth and preventing disease. Lactic acid is considered the best tonic, appetizer, liver and bowel regulator known for hogs and poultry.

Costs Less Than 2c. Per Gallon To Feed

One gallon of Lactein mixed with thirty gallons of water and fed with the usual grain feed will show greater gains than from feeding the grain alone, besides it will keep the hogs and poultry healthy and their appetites keen.

If your dealer does not handle Lactein, write us for our booklet and prices.

LACTEIN COMPANY 905 E STREET MODESTO, CAL.

Closing Out Sale of Percherons

The Sam Wade & Son Stud

La Grande, Oregon, November 25

47 Stallions and Mares

Owing to advanced age of the senior member of the firm of Sam Wade & Son, Lostine, Oregon, it becomes necessary to close out their entire stud of registered Percherons.

The offering consists of 47 head, including 8 stallions ranging in age from yearlings to five year olds, four weanling stud colts and 35 mares, and fillies. Among the cataloged lots are a number of sons and daughters of the great Calypso.

This stud has been the largest winner at the leading Northwest shows for many years. The stallions are the ton kind, and the mature mares will weigh from 1800 to 2000 pounds. Wade Percherons have a reputation for size, bone, quality and soundness. For catalog address

The Cultivator Costs Only $1.00 Per Year

A Pure Bred Sire Demonstration

By Frank D. Tomson, Editor The Shorthorn in America

Some years ago the publisher of the Kansas City Star, the late W. R. Nelson, decided to demonstrate for the benefit of corn belt beef raisers the value of white Shorthorn bulls on common cows picked up at the Kansas City market. He accordingly fitted up a large farm near Kansas City and stocked it with common cows purchased from time to time at the Kansas City Stock Yards. The word common is used advisedly for they were indeed an ordinary lot, lacking breeding and consequently deficient in form and feeding qualities. He picked for red colors, assuming that the calves from white bulls would come largely roan.

In the selection of the bulls he was very critical, picking for thick flesh, ample scale, and feeding quality and always white in color.

The first cross showed a remarkable improvement over the conformation and character of the dams. From these a representative lot of heifer calves was reserved for the breeding herd and when of sufficient age they were bred and their calves, having the second cross, showed still further improvement. Then the third cross was made and now the fourth cross calves are putting in their appearance. Each succeeding cross shows positive improvement, both in form and feeding and milking tendency.

Mr. Nelson's forecast as regards the colors was correct for the calves have come overwhelmingly roan in color. Now that the white blood has been intensified, the later crops of calves show a good many whites. With these several crosses the calves are approaching the pure bred type.

Since Mr. Nelson's death an annual demonstration has been put on at Sni-A-Bar farm showing the several stages of the demonstration. At the recent demonstration in October one of the most interesting comparisons was two groups of calves, the best ten and the poorest ten calves, shown with their dams. One observed readily that the dams of the ten poorest calves were scant milkers and on the other hand the dams of the best calves all showed a liberal tendency to milk. These cows were in rather thin flesh, while the dams of the poorest calves were looking thrifty. This comparison places an emphasis on the good milking cow.

The calves of the first, second and third crosses were grouped in near by pens giving an interesting and concrete object lesson in the value of pure blood in the making of beef form. These demonstrations have been largely attended by corn belt farmers and stockmen. A program is provided and addresses made by well known cattle breeders and livestock experts.

A feature of additional interest in the form of a field show put on by the American Shorthorn Breeders Association in which pure bred cattle only competed carried the demonstration one step farther and conveyed to the spectators a suggestion of the value of pure bred animals as against grades. It is evident that the grading up process, however successful, requires a long time, starting with a common foundation, and regardless of the number of years spent the results in the end are grade cattle. By laying the foundation with pure bred cattle not only is the time saved, but the profits are larger at every stage of the game.

Back in Lancaster County, Pennsylvania, where cattle feeding has been carried on extensively and systematically for many years to such an extent and with such success that very general prosperity obtains in the county, a show of Shorthorn cattle was put on recently and several exhibitors from outside of Pennsylvania sent their herds to compete with Pennsylvania entries in response to the request for an object lesson of this nature. The results were all that could have been hoped for.

There is a growing inclination in all sections now toward pure bred standards to insure efficiency in the feed lot and in the dairy. It is a wholesome tendency.

Blackleg Prevention

Dr. J. P. Jacks of Phoenix, extension animal husbandman of the bureau of animal industry, recently accompanied the "livestock squad" of the agricultural extension service in its field trip over Arizona ranges. Eight hundred stockmen were given information on blackleg in cattle but for the benefit of stockmen who were not able to attend any of the "squad" meetings Dr. Jacks has furnished the following statement:

"Practically all losses from blackleg may be prevented by the systematic vaccination of all young cattle a month before the season when the previous losses occurred from the infection. The re-seeding of the soil with blackleg spores or germs may be largely avoided through the prompt disposal of the animals dead of blackleg, by burning, or when this is impracticable, by proper burial of the carcass. Drainage and cultivation of the infected pastures where practicable is also advised.

"It is to be remembered that blackleg may be prevented much more certainly and economically than it can be treated and that vaccination is the cheapest and most satisfactory way of preventing the disease. It was formerly thought by a rather large number of stockmen that by 'rowelling,' 'bleeding,' 'driving' and also by using garlic and pine tar to act as a vaccine that the disease could be prevented. This is simply an ancient fallacy and has no prophylactic vaue whatever.

"Blackleg vaccine has been in use many years to immunize young cattle against the disease. This vaccine is one of the earliest and most successful agents employed for the protection of cattle against an infectious disease and has enabled stockmen to successfully raise cattle in badly infected blackleg districts. Like all true vaccines this one has certain limitations, the more important of which are the severe reactions and occasional death in an extremely susceptible animal and insufficient production in others.

"It was formerly thought to be impossible to obtain adequate protection in all individuals by means of a single vaccination, without increasing the strength of the vaccine to a degree where it would be dangerous for the more susceptible animals. These difficulties have been eliminated recently by the development of a new immunizing agent which has overcome the deficiencies of the old vaccines to a great extent. This new product, known as the Blackleg Aggressin, is a sterile, germ-free product and therefore may be used without danger of causing blackleg. Since it is only slightly toxic, it may be given in sufficient dosage to safely immunize most animals at a single vaccination.

"For best results under all conditions we advise regular spring and fall vaccinations of all cattle under two years old, but the time for the vaccinations varies with the localities and seasons. Losses from blackleg occur when the feed is good and the cattle start to improve in condition. It is best to fix the time of vaccination so that the work will have been completed at least two weeks before the date when the early losses have occurred in the previous years."

RECORDS OF LEADING COWS

Leading records for California for production of fat and milk by Holstein, Jersey and Guernsey cows were recently made public by the breed associations in charge of the records.

Among the Holsteins De Kol of Valley Mead 2d (A. W. Morris & Sons) produced 2306.6 pounds of milk and 92.275 fat during June. She is ten years and one month. Roma Princess Alcartra (J. S. Gibson Co.) produced 2107.7 pounds milk and 77.774 pounds fat. Her age is four years

and six months. Anoakia Pontiac Beets (Mrs. A. M. Baldwin) showed a record of 1795.7 and 63.793 pounds respectively. She is three years and four months. Miss Aaggie Acme Burke (Morris) produced 2253 and 69.392 pounds respectively. She is two years and three months.

Among the Jerseys Pearly M. of C. F. (S. P. Kelly), 9¾ years, produced 1440.9 and 67.43 pounds respectively; Irene Cadora (A. A. Jenkins), eight years and two months, 1261.6 and 63.46; Fairy's Last (E. W. Elleby), 9½ years, 1250.3 and 58.39 pounds; and Bonnie Belle M. (Kelly), 13½ years, 1230.8 and 50.96 pounds.

Among the Guernseys, all over five years, Imp. Cherry III of the Effords (G. W. Wilder) showed a record of 1664.7 and 66.59; Little Beauty 2d (Elliott-Brant Rancho), 1360.2 and 66.51; Imp. Dosia of Sarnia (A. B. Humphrey), 1341.6 and 65.47; Proud Dame (W. H. Dupee), 1169.6 and 63.51.

All above records were for the month of June with three exceptions. Yearly records showed that Laurameka, seven years old, produced 29.899 and 1061.27; Aaggie Acme of Riverside, 20,355.8 and 843.25. She is 11½ years.

Questos Una produced 9566.1 and 480.6 (8½ years old); Etbel C. of the Willows (six years), 8979.9 and 444.26.

Holstein short time official tests showed that Princess Roma Alcartra produced 476.2 and 25.224 for the best seven days, and 2493.2 and 100.66 for the best 30 days. Susie Segis Alcartra Abhekerk (Bridgford Co.) produced in the best seven days 311.2 and 12.15.

BULLETIN ON COW TESTING

"The Cow Testing Associations in California," Bulletin 314, by Edwin C. Voorhies, assistant professor of animal husbandry in the University of California, is the title of a recent publication on this important work now carried on in California. According to the circular in every section of California there is need for cow testing work. Records of the work of the various associations which have been operating in California are shown. The need for continued testing is shown by actual records, and the value of this kind of work for future breeding is pointed out.

It is stated that with the present high prices for feed and labor, a dairy herd must average more than 200 pounds of butter fat annually in order to yield a profit to the owner. A plea is made for an association in every part of California as a powerful aid in increasing the production and the returns from dairy herds. Copies of this bulletin may be obtained by applying to the College of Agriculture, University of California, Berkeley, California.

THE OX WARBLE OR HEEL FLY

By interviewing a considerable number of cattlemen in different sections of Arizona at the time of the recent trip of the "Livestock Squad," F. C. Bishopp of the bureau of entomology, Dallas, Texas, found that there was considerable interest manifest in the question of the ox warble or heel fly. He states:

"The United States department of agriculture is now carrying on investigations looking toward the development of feasible control measures for this pest on the range as it is recognized as one of the most injurious insect pests of livestock in the country. The only method of bringing the pest under control now known is to squeeze the grubs out of the backs of cattle during the winter and spring months. This method is of course impracticable under most range conditions. Extraction of the warbles not only reduces the irritation but will of course prevent the emergence of the flies and reinfestation of the cattle the next year.

"A number of points in the life history and habits of this insect have been cleared up by recent investigations which prove to be very interesting. The grubs when mature crawl out of the holes in the hides of cattle, drop to the ground and a few weeks later produce heel flies. These flies are soon ready to lay eggs and begin attacking the cattle the first warm days of early spring. The eggs are cemented to the hairs about the heels of the animal. These hatch within three or four days, the minute grubs penetrate the skin, find their way through the tissues, and after seven or eight months appear under the skin along the backs of the animals. Holes are cut through the hide and the grubs which are at first quite small grow in the course of a few weeks to be about an inch long.

"The injury to the stock is produced in a number of ways. First, through the running of the cattle and bogging of poor stock while the flies are laying eggs in the early spring; second, the worry caused by the maggots penetrating the skin and the irritation produced by the migration of the grubs through the tissues of the body and their presence in the body for several months; third, the damage to hides by the cutting of holes through the back where the best leather is located."

Jealousy is as hard to hide as a bass drum.—Kin Hubbard.

AMOUNT TO FEED DAIRY COWS

Too many cows are underfed. A cow weighing 1,000 pounds needs each day, for the maintenance of her body, an amount of food equivalent to that supplied in eight pounds of clover hay and 20 pounds of good corn silage, according to M. H. Keeney of the University of Missouri college of agriculture. She must have this food regardless of whether she produces any milk. Food used for milk production must be in addition to that required to keep the cow's body. A 1,000 pound cow producing 20 pounds of four per cent milk a day, if properly fed, devotes about half of her feed to maintenance and half to milk production. Obviously when a dairyman has gone to the expense of supplying that half of the food required for maintaining the cow's body, it is poor economy to withhold any of the other half, all of which goes to produce milk. A cow then required feed in accordance to the amount of milk she is able to produce. The heavy producer needs the most feed.

Farm grown roughages (silage, hay, etc.) furnish the cheapest food nutrients. However, a good dairy cow cannot eat enough roughage to supply her needs for milk production. She must have some grain. Therefore, to feed with the most economy the following rules must be observed:

Feed all the roughage a cow will eat. She will eat more if fed three times a day instead of twice.

Feed grain in proportion to the pounds of milk produced.

To a Jersey or Guernsey cow feed one pound of grain for each three to three and one-half pounds of milk produced. To a Holstein, Ayrshire or Shorthorn feed one pound of grain for each four to four and one-half pounds of milk produced.

There is a strong demand for Toggenhurg goats for dairy purposes in Alaska, and no supply.

Cotton seed in the Yuma Valley, Arizona, is bringing $70 a ton.

Is Every Animal At Its Best?

Don't let your stock lose their Summer's gain through November neglect. Your animals are now going on dry feed—hay and grain.

It's a big change from the succulent, nutritious grasses of summer pastures which supply the needed laxatives and tonics.

Keep your animals' bowels open and regular—drive out the worms—keep their blood rich and keep their digestion good by feeding

Dr. Hess Stock Tonic

A Conditioner and Worm Expeller

Keep your stock up on their appetites. Don't allow them to "get off feed" and in a run-down condition.

Condition your cows for calving by feeding Dr. Hess Stock Tonic before freshing. Then feed it regularly to increase the flow of milk. It lengthens the milking period.

Buy Stock Tonic according to the size of your herd. *Here's a suggestion for your guidance:* Get from your dealer two pounds for each average hog, five pounds for each horse, cow or steer, to start with, feed as directed and then watch results.

Why Pay the Peddler Twice My Price?

You buy Dr. Hess Stock Tonic at an honest price from a responsible dealer in your own town who guarantees it, and who refunds your money if it does not do as claimed.

25-lb. Pail, $2.50; 100-lb. drum, $8.00

Dr. Hess Instant Louse Killer Kills Lice

5 37% FAT What does it mean?

SIMPLY this: It costs less to feed Jerseys than any other breed and they produce the richest quality of milk (butter fat average of 5.37%). Jersey Milk churned into butter and cheese bring the highest prices on the market.

Jerseys are the real "cow investment"! They start producing at an earlier age than any other breed and are still great milkers long after other cows have gone dry.

Let us give you some surprising information about Jerseys in our free booklet "Profitable Facts About Jerseys". Write today for it.

Get of sire—1, Ormondale Co.; 2, Pacheco; 3, Glide; 4, Dibblee; 5, Miller. Produce of dam—1, Dibblee, 2, Glide; 3, Bond.

The Herefords

The show at San Francisco was the occasion for rejoicing in the Hereford ranks and furnished the first real proof of the progress the breed is making in this state. For a good many years a little band of breeders has pinned its faith and hope on the merit of the Hereford, and each year the ranks have been augmented, and the show just closed is rated as the best Hereford show in California. Not only were the classes well filled, with well fitted animals from California herds, but local breeders measured strength with the strong herd sent West by the Hereford Corporation of Wyoming. California has always been regarded as preempted Shorthorn territory, but in the carload classes for steers, registered heifers and bulls, with the exception of one lot, all showed the whiteface trademark of the Hereford. Again, the sensation of the show, California Perfect Lady, the cross bred heifer that was grand champion in the fat classes, had a white face, and to round out the week the sale held by the Pacific Coast Hereford Breeders' Association established a new coast record for the breed.

The Eastern bull, Wyoming Prince, won his class from Patrician 5th that packed a lot of meat but was not as pleasing in his rear conformation. Sonoma took second owing to a lack of character and a bull look. Rule showed a very compact, low set, soggy, thick fleshed two year old. Henn was second with a grandson of Perfection Fairfax, lacking the class of the winner but with more character and size than Bonnie Laddie, champion at Los Angeles.

Cazier was forward among the senior yearlings with Nevada Lad 8th, a bull wtih much to recommend him. Bunting was second with Alec, a calf of promise. A polled was third and Henn was fourth.

New Era 2d, good headed, thick, low down and standing on exceptional bone, won among the junior yearlings. Both the senior and junior yearlings had friends for the high place. The Hereford Corporation also landed second over one entry of Barngrover and two owned by Henn.

Joe Dulcinea, en route to the Islands, led the senior bull calves a merry tussle until he was sent to the top on account of his unusual size for age. A Wyoming calf was second, Barngrover third and two Henn entries stood fourth and fifth. Bunting had a good calf out of the money that should have had a place.

Mission Prince, the junior calf that was grand champion at Sacramento, won first for Bunting over two from Wyoming. New Era 2d was made junior champion.

The three aged cows fell into their placings rather readily, the Eastern entry showing in nice form.

The two year olds furnished the grand champion in the very attractive Miss Rialto 2d. Bunting was second with Miss Betty, a heifer that is at home in good company. Barngrover was third over a Gable entry and the Diablo Stock Farm was in last place.

Cazier won the senior yearling class with a short legged, thick fleshed daughter of Harris Standard 2d. Bunting showed his lovely Lady Jane above another Nevada heifer of much the same stamp as the winner. A polled heifer was fourth.

The junior yearlings lined up with a nicely fitted, straight lined, well balanced Nevada calf leading.

In the senior heifer class the ringside differed decidedly from the judge, the "talent" feeling that the last two should have been first and second and top pair third and fourth.

The winner of the junior class, Lady Fairfax 9th, was made junior cham-

Get of sire—1, Cazier; 2, Barngrover; 3, Hereford Corporation.

Produce of dam—1, Bunting; 2, Hereford Corporation.

The Angus

Only one herd of Angus had entries in the breeding classes, that of Congdon and Battles, North Yakima, Washington. This is one of the top herds of the country and their exhibit did much to attract favorable attention to the breed. Alec McDonald of the university farm placed the classes to the satisfaction of all.

The Fat Classes

The showing made in the fat classes was a distinct advance over former shows and marks considerable progress. California is not a feeding section, as yet, but the time is not far distant when thousands of cattle will be finished on the ranches of this state, and such shows as the one just held will hasten the day and encourage the production of higher class beef by demonstrating what can be done.

In the single classes all breeds were represented and among them were a few sensational animals that will be seen at Chicago next month.

The Shorthorn champion was a full brother to last year's Chicago champion and a half brother to the famous California Favorite. He is outstanding in any company, and the fact that he won the breed champoinship is no reflection on the quality of the other entries.

The university had the only Hereford entry, hut he was up to the standard of that institution. He is a particularly attractive steer.

Some competition was furnished the university Angus entries by Congdon & Battles, but the Northern entries lacked class to overtop the splendidly fitted college steers. The champion Angus, a senior yearling, was made reserve to the grand champion.

The college won all places in the grades and crosses, and uncovered California Perfect Lady, a veritable sensation that is destined to add fame to this state. California Perfect Lady, a senior calf, the result of a Hereford-Angus cross, is red with a white face. To attempt to describe her perfection of form and covering and quality would necessitate the coining of new and unused superlatives. Declared by all to be the superior of anything they have ever seen, she represents the acme of baby beef perfection and is a credit to California, the university, and a living testimonial to the ability of her feeder, Alec McDonald.

Dean C. F. Curtis of Iowa placed the fat classes. The awards follow :

Shorthorns

Yearling steer, spayed or martin heifer—1, Ormondale Co., Redwood City, on Sultan of Maplehill; 2, T. S. Glide, Davis, on Cheerful Maid 4th; 3, Thomas D. Miller, Hollister, on Introduction. Calf steer, spayed or martin heifer—1, University of California, on California Majestic; 2, Henry M. Elberg, Woodland, on Roselawn Jock.

Champion, California Majestic; reserve, Roselawn Jock.

Herefords

Yearling steer—1, University of California on California Prime Duke.

Champion, California Prime Duke.

Aberdeen-Angus

Yearling steer—1 and 2, University of California on U. C. Jock 3rd and California Thickset 3rd. Calf—1, University of California on U. C. Jock 4th; 2 and 3, Congdon and Battles, Yakima, Wash., on Ericaman C. B. 2nd, and Ericaman C. B 3rd.

Lot of three—1 and 2, University of California.

Champion and reserve, U. C. Jock 4th and U. C. Jock 3rd.

Grades and Cross-breeds

Yearling steer—1 and 2, University of California on California Grizzly and California Peer. Calf, steer or heifer—1, University of California on California Perfect Lady.

Lot of 3—1, University of California.

Champion and reserve, California Perfect Lady and California Grizziy.

Champions by Ages

Champion and reserve champion yearling steer, University of California on U. C. Jock 3rd and California Grizziy.

Champion and reserve champion steer or heifer calf, University of California on California Perfect Lady, and California Majestic.

Grand champion and reserve steer or heifer—of the show, California Perfect Lady and U. C. Jock 3rd.

SWINE BREEDERS' BANQUET

The State Swine Breeders' Association held a banquet in the banquet room in the building occupied by the California International Livestock Show Tuesday evening of the show. C. B. Cunningham, president of the association, presided, while short talks were listened to by Gordon H True, manager of the show, who spoke of the great value of the show to California, its international character, as it had attracted show herds from as far east as Nebraska, south to Arizona and north to Washington, and he trusted all breeders would lend their efforts towards making the show one of permanency. S. H. Green of the associated dairies told of the great value of the show to the dairy interests of the state and the feeding value of skim milk. Other speakers included Frank B. Anderson, Roy E. Fisher, Lincoln, Nebraska; W. F. McConnell. J. Francis O'Connor and Robt. F. James.

MARCH HOG SALE

John M. Bernstein and W. L. Haag & Son announce their combined sale of big type bred sows and gilts to take place at Hanford on March 13. It is expected this sale will attract many buyers who desire to build up their stock with some of the best blood offered in the San Joaquin Valley.

SUGAR SHORTAGE HITS THE BEE KEEPER

In many parts of the country there has been a lack of nectar during late summer and fall, and many colonies of bees are not provided with enough stores to last through the winter and enable them to build up properly next spring. This lack is especially deplorable just now because of the bright outlook for good hney markets next year. Bee keepers whose bees are not adequately provided with good honey stores in abundance should do their utmost to get granulated sugar from which a thick syrup can be made to take the place of the honey stores. Nothing but granulated sugar can be used with safety for this purpose.

The present shortage of sugar therefore creates a serious problem, and if bee keepers are unable to get sugar at this time, it will still be possible to save the bees by feeding a thick syrup of granulated sugar at the very first of the spring brood-rearing. It is best to feed in one lot rather than to extend the feeding over several days.

GATHERING STATISTICS

George Robertson, state statistician, is beginning work on the 1919 statistical report which will be issued by the California state board of agriculture. The report for 1918 is as complete as it could be considering the limited appropriation with which Mr. Robertson has to work. The appropriation is practically the same for the coming year, but efforts are now being made to secure even greater completeness to the coming report. California needs more complete agricultural statistics than the state board has yet been able to give. It is to he hoped that the next legislature will he more liberal.

SMOKE YOUR MEAT THE "WRIGHT" WAY

Thousands of Farmers are Using Wright's Condensed Smoke (made from seasoned Hickory Wood). A small brush, thirty minutes and a $1.00 bottle Wright's Smoke, smokes a barrel of meat. Smokes it thoroughly and gives the meat a delicious flavor. No fooling with fires. No danger of meat spoiling. No drying out or shrinkage. Easier, Cheaper, Quicker and better than using a smoke house.
Curing Meat Before Smoking is very important. Wright's HAM PICKLE is a scientifically prepared sugar cure that gives perfect results. A $1 jar and 27 pounds of salt cures a barrel of finely flavored hams and bacon.
Wright's FARM BUTCHERING SET (Nine regular butchers' tools, including saw and cleaver) should be on every farm. We buy in carload lots and Re-sell at Cost—$3.95. Send for instructive booklet: "The New Way of Smoking Meat."
All Wright Products are Guaranteed. Sold by All Drug and General Stores.

Shall Oleomargarine be Colored?

A committee was appointed to make recommendation as to what should be the attitude of the southern agricultural workers on the oleomargarine question. The committee consisted of W. R. Dodson, dean and director, Louisiana College of Agriculture; Dr. Tait Butler, editor Progressive Farmer; J. F. Duggar, professor of plant physiology, Cornell University, Auburn, Ala.; B. W. Kilgore, director of experiment station, North Carolina, and H. A. Morgan, dean and director, Tennessee College of Agriculture and experiment station.

The recommendations have been made and with them appear the apologies of the authors for the making.

It reads as if a number of oleomargarine lobbyists had made it, instead of men posing as being vitally interested in the advancement of agriculture in the South.

In fact the recommendation grants the one chief thing that oleomargarine interests have for a decade been lobbying and spending fortunes to secure. viz: Permission to color their product yellow in imitation of butter, so it can be sold as butter and at the price of butter.

After making a direct statement that present requirements relating to the coloring of oleo are unsatisfactory; that latitude should be given for the manufacture of oleomargarine in forms which will be most attractive to the consumer. the committee apologizes most courteously for the manner in which it has "double-crossed" the dairy interests of the South.

In doing so this committee grants that dairying is the form of live stock husbandry which tends to increase and take the place of meat production as population increases; that the cow is essential to the most economical disposal of rough by-products and crop residues of the farm; that she is essential to the most economical improvements and conservation of soil fertility; that the building of the dairy industry in the South is of much greater importance to the agricultural development of the South than is the extension of oleomargarine production, or the furnishing of such an enlarged market for vegetable oils as would be furnished by increased oleomargarine production. It is very evident that this is just "sop" to quiet those who are favorable to dairying for the committee recommends the one vital thing asked for by the oleomargarine interests and the one vital thing the dairy interests have continuously and vigorously opposed.

Of course, the committee recommends that oleomargarine be sold on its own merits and for what it really is and that the public he absolutely protected against deception. In fact it is recommended that a federal tax. sufficiently large to cover all expenses for proper control of grease camouflaged to look like butter, be levied.

But, recognizing all of these things why a committee of intelligent men posing as friends of southern agriculture should recommend the elimination of the one great measure that has and will protect the dairy cow from the unfair competition of the coconut tree, of the cotton seed, of the pea nut, of the steer and of all other producers of cheap vitamine-free oils surpasses the understanding of all true friends of the farmer who milks cows, whether he lives in the South North, East or West.

The above is from Kimball's Dairy Farmer. It is a graphic proof of the narrow selfishness of "farmers" of the South who do not happen to be dairy farmers.

Care Needed by Immunized Hogs

Improper care of hogs following their immunization against hog cholera, administered in public stockyards and after arrival at their destination, has resulted in losses which may be materially decreased. The following instructions for the prevention of losses are issued by the bureau of animal industry of the United States department of agriculture:

Shipments should be made promptly after immunization or should be delayed for not less than ten days. Truck hauls and shipments not exceeding 36 hours in length can be made promptly to advantage.

Avoid crowding; allow stocker hogs relatively more floor space than fat hogs.

It is important that drinking water be constantly accessible to the hogs, except in severe winter weather. If the car does not contain special water devices, a water trough, protected by slats over its top, should be securely fastened to the floor.

Little or no feed is necessary during the 24 hours following inoculation, but clean water should be accessible. Short-haul shipments need not be fed in transit.

When hogs arrive at their destination they should not be driven over the roads, but hauled from the car to the farm in wagons or trucks. Load and unload gently. Avoid chasing and unnecessary excitement in handling In summer load where there is natural woodland shade or shelter pens; in winter where there are suitable clean, bedded houses.

Protection against rain should be provided.

Do not permit wallows in pasture or lot. The use of wallows by recently inoculated hogs may produce pneumonia.

For the first two weeks, if it is in season, allow shipped hogs limited fresh pasturage. If alfalfa or other leguminous pasture is not available, a supplemental protein concentrate should be supplied. If no pasture, use self-feeders for soaked oats and separate ones for tankage or other protein concentrate. At the end of two weeks begin gradually to change to the permanent ration. Keep fresh, clean water always available.

Watch your hogs carefully each day for failure to feed or other signs of disease or sickness. Have a quarantine pen and place sick hogs in it promptly.

Short rations and a laxative may be used for slightly sick hogs.

The appearance of any disease in which a number of hogs are similarly affected requires immediate expert advice and treatment. Consult your veterinarian.

What is Breeding?

The following definitions have been adopted by the United States department of agriculture for use in the "Better Sires—Better Stock" campaign which it will conduct in cooperation with the various statos, beginning October 1:

Purebred:

A purebrod animal is ono of pure breeding representing a definite recognized breed and both of whose parents were purebred animals of the same breed. To be considered purebred, live stock must be either registered, eligible to registration, or (in the absenco of public registry for that class) have such lineage that its pure breeding can be definitoly proved. To be of good type and quality, the animal must be healthy, vigorous, and a creditable specimen of its breed.

Thoroughbred:

The term "thoroughbred" applies accurately only to the breed of running horses eligible to registration in the General Stud Book of England, the American Stud Book, or affiliated stud books for thoroughbred horses in other countries.

Standardbred:

Applied to horses, this term refers to a distinct breed of American light horses, which includes both trotters and pacors which are eligible to registration in tho American Trotting Register. Applied to poultry, the term includes all birds bred to conform to

the standards of form, color, markings, weight, etc., for the various breeds under the standard of perfection of the American Poultry Association.

Scrub:

A scrub is an animal of mixed or unknown breeding without definite type or markings. Such terms as native, mongrel, razorback, dunghill, piney woods, cayuse, broncho, and mustang are somewhat synonymous with "scrub," although many of the animals described by these terms have a certain fixity of type even though they present no evidence of systematic improved breeding.

Crossbred:

This term applies to the progeny of purebred parents of different breeds, but of the same species.

Grade:

A grade is the offspring resulting from mating a purebred with a scrub, or from mating animals not purebred, but having close purebred ancestors. The offspring of a purebred and a grade is also a grade, but through progressive improvement becomes a high grade.

PUTTING CALVES ON RATIONS

Work has recently been done at the University of Missouri College of Agriculture to determine the earliest age at which calves can be taken off skimmilk and still continue to make normal gains. The general plan has been to wean one group of calves at five months, another at four months, another at three months, and a fourth group at two months. Both before and after weaning, the calves were weighed and measured every ten days and the weights and measurements compared with normal weights and measurements for the breed.

Success has been attained by weaning both Jersey and Holstein calves at five months, at four months, and at three months, and practically normal gains were secured in almost every case when the calves were taken off a skimmilk ration at the age of sixty days.

The plan followed has been to get the calves to take a good ration of skimmilk with some hay and grain as soon as possible. For the first two weeks after birth a small calf such as a Jersey should receive from eight to ten pounds or four or five quarts of milk daily. This should be fed in two or three feeds a day. A large calf such as a Holstein may be given 10 or 12 pounds daily. When the calf is two weeks old it can be gradually changed from a ration of whole milk to one of skimmilk by substituting an equal amount of skimmilk. A complete substitution can be secured in a week or ten days. When this substitution has been completed a medium-sized calf should be receiving about 12 pounds of milk daily. From this time until two months old a calf should receive from 12 to 15 pounds of skimmilk daily, depending upon the size and condition of the calf. During this period the calf must be taught to eat hay and grain. The calves on experiment were fed liberally by this plan until about 55 to 60 days old at which time they were taking an average of about one pound of grain daily. The amount of skimmilk was then reduced a half and the amount of grain and hay somewhat increased. About a week or ten days later the rest of the skimmilk was withheld provided the calves were doing well. At this time the calves were about 65 to 70 days old and were receiving a ration made up entirely of alfalfa hay and a grain mixture.

FISH MEAL AS A FEED FOR HOGS

In an experiment recently completed for the animal industry division, North Carolina Experiment Station, Earl Hostetler has demonstrated that fish meal is as efficient as tankage as a protein feed for hogs, and is not so costly.

In the experiment, he used two lots of hogs of six each, which were fed for a period of 119 days. The first lot was fed a ration consisting of nine-tenths of shelled corn and one-tenth of tankage. The average initial weight was 131.83 pounds. The average final weight was 244.50 pounds, or an average gain for the period of 112.67. The average daily gain was .95 of a pound. This lot consumed 3,610 pounds of feed, or 534.02 pounds of feed for every 100 pounds of gain made. The cost of the feed for every 100 pounds of gain was $20.10.

Lot No. 2 was fed a ration consisting of nine-tenths of shelled corn and one-tenth of fish meal. The average initial weight was 131.17 pounds. The average final weight was 249.67 pounds, or an average gain for the period of 118.5 pounds. The average daily gain was 1.00 pound. This lot consumed 3,610 pounds of feed, or 507.73 pounds of feed for every 100 pounds of gain made. The cost of the feed for every 100 pounds of gain was $18.86.

The prices of feeds used in the experiment were:

Shelled corn, $2 per bushel of 56 pounds; tankage, $110 per ton; fish meal, $100 per ton.

A mineral mixture consisting of charcoal, lime, salt, sulphur and copperas was kept before the animals at all times, with lot No. 1, or the tankage lot, consuming 14 pounds, and lot No. 2 consuming 31 pounds.

WINTER CROPS FOR SPRING SILAGE

Farm Adviser Jungerman of Stanislaus County states that last spring a number of dairymen in the Modesto district made excellent silage from oats and barley. The crops may be planted during the winter months and may fill in after all the corn or sorghum silage has been used up.

The amount of seed sown is about the same as when planting these crops for hay. Canadian field peas or Oregon purple vetch may be sown with oats or barley in various combinations depending uopn what proportion of legumes is wanted in the silage. One part legume to three parts of either barley or oats makes a good combination. Those who failed to fill their silos this fall may substitute the foregoing for corn silage while waiting for fall silage crops next year.

Costs Only $1.00 Yearly

From the Producer to the Plate

By James De Camp

OBSERVANCE of "Farm to Table Week" begins today, the campaign closing on November 22. The purpose of this movement, nation wide in scope, is to bring the producer and consumer to terms of greater intimacy that the two together may take a swat at the high cost of existence.

The route from the soil to the stomach is usually devious and roundabout, involving freight handlers, middlemen, wholesalers and retailers. The "Farm to Table Week" idea reduces the intermediate processes to three simple factors—the farmer, the market basket and the kitchen range.

The program, which has received the indorsement of hundreds of automobile clubs, motor car manufacturers and dealers, farmers organizations and other bodies, urges every owner of an automobile to drive to the country and purchase produce and dairy products direct from the producer.

All farmers having goods to dispose of are asked to post signs along the highways calling attention to their wares and to keep a supply ready at the roadside. Butter, eggs, chickens, turkeys, pumpkins, potatoes, squash, carrots, cabbage and other eatables should find a ready sale at prices which, although far below city quotations, afford a neat profit to the grower. With Thanksgiving approaching the demand should be especially heavy.

An opportunity will be afforded for the disposal of certain foodstuffs which, because of lack of transportation facilities or the high cost of marketing, would otherwise go to waste or be used for stock feed. It is estimated that in California alone there are many tons of foodstuff in the hands of farmers which will never be utilized unless the consumer jumps into his machine and goes a-marketing on the highways. Especially is this true of certain varieties of squash and the casaba.

Those behind "Farm to Table Week" believe that both the public and the farmer will find the wayside market a source of saving and convenience. If adopted on a large scale this method of dealing would inevitably drag down the skyrocketing prices of certain necessities by enlarging production and utilizing every ounce produced. Then there is the added incentive to the buyer of getting things fresh from the soil or just out of the churn. Often delectable varieties of produce can be bought that are not available in the city markets.

Several Southern California farmers are making a specialty of squash at about one-half the regular price. They bring about this reduction by cutting the vegetable in two and cleaning out the seeds, drying the latter for the seed houses or for their own use. Passing automobilists are delighted with this arrangement while the money taken in by the farmer is as good as found, since, heretofore, the eatable portion of his seed stock has been almost a total loss.

At present green corn, which sells in city markets for 60 cents a dozen, can be bought at the roadside for from 35 to 40 cents. Melons and many other good things to eat are priced in the same proportion. A man with a large family can often save the price of five gallons of gasoline by trading direct with the farmer.

At the same time the person who grows the stuff is making his usual profit without the bother of packing, bunching or crating and the expense of transportation and commissions.

STEADY EMPLOYMENT

Smith—"Who are you working for now?"

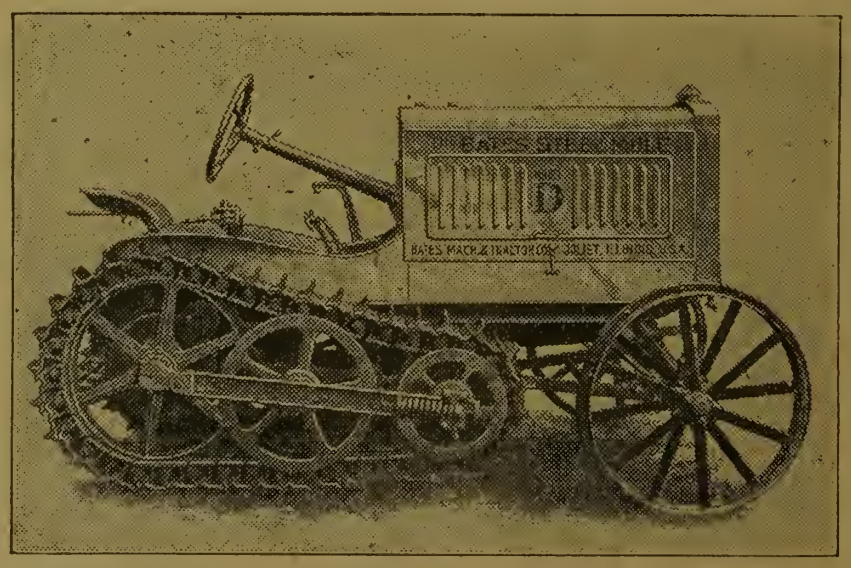
Jones—"Same people—wife and five children.—The Passing Show.

The Bates "Steel Mule" Model D Rating 15-22

The Bates "Steel Mule" Gives You More Working Hours

"Ask the man who owns one"

Send for Free New Catalog



The Bates "Steel Mule" Cuts Out Your Feed Bills

"Every owner a satisfied booster"

Names furnished on application

The "Steel Mule" does everything that any tractor can do and a great deal that others cannot do

PLOWING

The "STEEL MULE" is a 3-plow tractor, with enough reserve power to pull its plows under almost every condition. A good day's plowing for the MULE is 10 to 15 acres. In a plowing test held by the Ohio State University, it outclassed all other tractors, by plowing at the rate of 13 4-5 acres per 10-hour day. A record of 14½ acres a day was made at Salina, Kansas, in moist gumbo stubble; the fuel cost in this instance was only 18 cents an acre.

DISCING AND HARROWING

The "STEEL MULE" handles a 10-foot disc, set at full cut and weighted, with drags as a regular load. Under ordinary conditions there is more than enough power to carry the tools at 3½ miles per hour on ½ gallon fuel per acre.

SOIL PACKING IMPOSSIBLE

It is absolutely impossible to pack the soil with the Bates "STEEL MULE." The machine's weight is evenly distributed over the broad surface of the crawlers; the ground pressure is only 3½ pounds per square inch.

ORCHARD AND BEET WORK

The Bates "STEEL MULE" is the ideal Tractor for Orchard Work. It is narrow and close to the ground, making close up work possible without injuring branches. The Tractor turns in a 16-foot circle. It straddles and pulls out two rows of beets without any alteration.

BELT WORK

Besides being a perfect field machine the "STEEL MULE" does efficient belt work. It will handle satisfactorily your separator, ensilage cutter, irrigating pump, wood saw, feed grinder, electric generator and any belt driven machinery which does not exceed the MULE'S guaranteed 22 horsepower.

HOW BUILT

The Bates "STEEL MULE" is built entirely of steel: the frame of pressed steel, the wheels and tracks of crucible steel, and all gear housings of cast steel. The "STEEL MULE" is fitted throughout with Timken and Hyatt Roller Bearings, placed high out of the sand and dirt and enclosed in dust and oil proof casings.

Sales are very heavy now, and immediate delivery is being made; prompt delivery on orders received after January 1 is indefinite.

WESTERN BERKSHIRE CONGRESS BANQUET

The Western Berkshire Congress held a banquet on Monday evening, November 3, in the banquet hall of the building in which was held the first California International Livestock Show. In the absence of the president, A. B. Humphrey, the meeting was presided over by the former president, W. M. Carruthers. Dean Curtiss of the Iowa agricultural college and president of the American Berkshire Association, spoke relative to the present condition of the association and said that at the close of the present year the association would be in better condition than it had been for years. He congratulated the California breeders on the excellence of the animals they were showing and the high quality they were breeding.

Gordon H. True, manager of the California International Livestock Show, thanked the breeders for their cooperation and support of the show, called their attention to the San Francisco business men who by their liberal donations had made this great show possible. He also said he hoped the breeders would in some way express their appreciation of their efforts so that the show would be made a permanent one. Frank B. Anderson, publicity manager of the show, was also one of the speakers, as was W. F. McConnell, J. Francis O'Connor, Charley Barrows, J. L. Thatcher, Mrs. Hardy, Charley Mauer and George Upham.

Sale Extraordinary

Circumstances over which I have no control force me to sell now instead of next spring as I intended

50 Head of Registered Poland China Hogs

Consisting of a few bred sows and boars, all the rest are open gilts just ready to breed for March litters. This is by far the choicest bunch of pigs I have ever owned. The cream of the East and West in breeding. I surely hate to part with them but my loss is your gain. Sale on

RIVERSIDE-SAN BERNARDINO BEE NOTES

By A. F. Clarke.

For the first time in the history of the honey business in California, four carloads of cotton blossom honey was sold through the California Honey Producers Cooperative Exchange the past season. This honey was produced in the great Palo Verde and Coachella valleys in Riverside County.

This was only one of the interesting items made public at the meeting of the Riverside and San Bernardino Counties local of the exchange, held here this week.

As generally known the past season has been a poor one in Southern California, owing to the light rains and cold spring. Despite this handicap, however, the bee men of the two county locals report an output of 6,177 cases of honey valued at $150,000. The two counties in good years produce about $700,000 in honey. Of this year's honey harvest over 2,700 cases valued at $66,000 have been sold to date. The average price received has been 19½ cents a pound.

Most bee keepers will have to feed their bees during the winter and the members of the local will endeavor to secure 100 tons for the two counties from the state exchange.

The local elected officers as follows: Directors, R. Powell, E. W. Horne, Riverside; L. L. Andrews, Corona; John Mack, Bloomington; H. T. Wagner, Redlands.

Ten locals comprise the state exchange.

TREATMENT OF SMUTTY SEED WHEAT

Very smutty grain probably should not be used for seed unless treated by the soaking and skimming method. If not much smut is present, the sprinkling method may be adopted and is more easily handled. The grain should first be thoroughly recleaned by running it through a good fanning mill several times if necessary. All shriveled grains and especially all smutted kernels should be removed.

The formaldehyde solution is made by stirring ono pint of formaldehyde in 40 gallons of water. This will treat about 50 bushels of grain. In the sprinkling method the wheat is spread out in a thin layer and sprinkled with the solution while being shoveled over and thoroughly mixed so that all the kernels are made fairly wet. It is then piled up and covered with canvas or blankets for two hours, then spread out again and stirred occasionally to hasten drying.

Treated grain should be sown as soon as possible, by all means within 24 hours, or a poor stand is likely to result. Treat in small lots only, not more than can be sown in a day. If this is done in the evening, sowing can begin early the next morning. Another plan is to treat in the evening what can be sown the following forenoon, and in the morning what can be sown in the afternoon.

FOREIGN TRADE CONVENTION

American business men are already manifesting keen interest in the next National Foreign Trade Convention, which is to be held in San Francisco May 12 to 15, 1920. This gathering promises to be of exceptional significance in the period of readjustment and comparative uncertainty through which commerce is now passing. The program will be so formulated as to have a vital bearing on the essential aspects of over-sea markets and their vigorous, effective cultivation by producers in the United States. One particularly important feature will be the emphasis given to the problems of Pacific trade. Meeting at one of the great American ports that look toward the Orient and the South Seas, those in attendance at the sessions will keep steadily in mind the desirability of increasing our knowledge of that region and of devising more adroit and comprehensive means for sharing in its trade. Those in charge of the arrangements for the convention are therefore issuing a special invitation to all American business men who are established in any of the countries on the shores of the Pacific. It is earnestly hoped that many will be present and that, through the resulting interchange of advice and information, much may be accomplished for the furtherance of American interests in all Pacific lands.

SORGHUM TAKES THE PLACE OF SUGAR

With sugar advancing in price it is to be presumed that syrup and molasses will be in stronger demand. In fact the situation may call attention to the advantage of growing more sweets in the form of sorghum molasses. Within the past three or four years this awakened interest has resulted in the establishment of several mills. One of these operating at Pomona is greatly enlarged and improved this year. A limited amount of syrup was made in 1918 and this year a new mill was brought from the East and crushing is proceeding as rapidly as possible. The capacity of this mill is about 300 gallons per day and for the season perhaps well up toward 10,000 gallons. The largest grower in Pomona Valley has about 15 acres. The mills are taking the sorghum as it is delivered and crushing and producing the syrup for around 50 cents per gallon. An acre will produce anywhere from nothing up to 300 gallons according to the care given and other factors; a fair average perhaps is around 150 gallons. Besides the molasses there is a possible production of 1,000 pounds of seed and several tons of bagasse, or crushed pulp of the stalks, which is sometimes cut and put in silos and fed to stock and sometimes dried and used for fuel. Again it makes a good dressing for land where a mulch is desired.

California is now growing three varieties, Orange, Honey and Amber. The Orange is one of the best producers because it stools and is very prolific, but it requires an exceptionally long growing season and must be planted early. The Honey requires four months to mature. Amber is the quickest maturing and is sometimes planted after oats or barley has been cut.

AGRICULTURAL CLUB CONFERENCE

The annual conference of members of grammar and high school agricultural clubs was held in Davis, October 16-18. The conference was attended by clubs from nearly every county in tho state, some counties sending only one or two representatives while others like Kern and Tulare chartered busses and sent full delegations. There were 302 attending the three days' session. They were furnished with tents on the state farm, where with picture shows giving agricultural practices, inspection visits to irrigation demonstrations on the farm, and to the barns of horses, dairy and beef cattle, hogs and sheep, and with judging demonstrations, they put in a most valuable three days. Of course there were addresses, Dean Hunt attending and making one. Other events of interest were athletic sports, songs, yells, and the erecting of tents after they blew down in the small hours of one of the nights.

The transcontinental trip taken by the clubs a few years ago will not be repeated until transportation costs return to normal. Even the state trip this year was so expensive that the attendance from the extreme southern end was not so large as anticipated.

HOPS

Fifty per cent of California's 1919 hop crop has been contracted for by buyers in "wet" countries, principally France, England, China and Japan, it is announced by Sacramento Valley dealers. The first shipments of hops were made at 50 cents a pound. An increase of this figure is expected, for there is an exceptionally strong demand for hops, not only in foreign countries but by brewers throughout the United States. As big a quantity of hops is required in the manufacture of "near beers" as in the making of beer of high alcoholic percentage.

The hop crop in the Sacramento Valley this year will total 40,000 bales or 8,000,000 pounds. It will be worth $4,000,000. In the rest of the state the yield will be 30,000 bales, making a total of 14,000,000 pounds for the whole state, worth $7,000,000. The Sacramento Valley crop is 15 per cent greater this year than in 1918, the acreage for this section being 5,200. After the crop in 1917, when the hop market was demoralized due to the war, many growers curtailed their hop acreage, planting their lands to other crops. When the prospects for a high market were good early last spring, the acreage was increased again.

The great hop fields of France and Belgium were devastated during the war while the hop acreage in England was reduced one-half. For this reason there is a strong market for the California crop. California hops will be sold in England this year, it is reported, under Belgian labels, for the variety produced in this state is identical with that of the fields of Belgium.

AIRPLANE SCOUTS DIE

The state department of agriculture in referring to the recently chronicled death of two airplane scouts for pink bollworm says:

"This work has received a serious setback as a result of the fatal accident on August 7, in which both Lieutenant Tillisch, pilot, and E. L. Diven, technical observer lost their lives. These flights had been conducted for a considerable period without serious accident. The danger of this service was fully recognized, but it was hoped that the federal horticultural board's record, under which the flights were conducted, would be a clean one, except as to accidents of minor character. Both Lieutenant Tillisch and Mr Diven were men of high character and undertook the work with a full realization of the personal risk

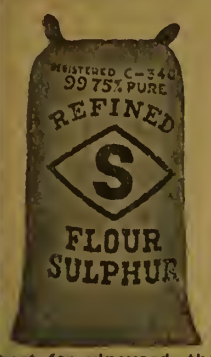
SULPHUR



It has been proven and so recommended by the University of California that if you sulphur your grape vines and orchards SIX times they will not be affected by MILDEW or RED SPIDERS.

ANCHOR Brand Velvet Flowers of sulphur, also EAGLE Brand, Fleur de Soufre, packed in double sacks, are the fluffiest and PUREST sulphur that money can buy; the best for vineyard, the best for bleaching purposes, LEAVING NO ASH.

VENTILATED sublimed Sulphur—Impalpable Powder, 100 per cent pure, in double sacks, for Dry Dusting and making Paste Sulphur.

For LIME-SULPHUR SOLUTION, use our DIAMOND "S" BRAND REFINED FLOUR SULPHUR. We can furnish you this sulphur at such a low price that it would pay you to mix your own solution and net you a profit equal to the amount paid out for labor in spraying your orchard, even if you pay your men $4 per day for making the solution and applying same.

To create additional available plant food, drill into the soil 100 to 400 pounds per acre DIAMOND "S" BRAND POWDERED SULPHUR 100 per cent pure. This has increased various crops up to 500 per cent.

Also PREPARED DRY DUSTING MATERIALS, Tobacco Dust, Dusting Sulphur Mixtures, etc.

And "Anchor" Brand Standard LIME-SULPHUR SOLUTION 33 DEGREES BE.. Fungicides and Insecticides.

Carried in stock and mixed to order.

PLANT WHEAT

A communication from the department of agriculture at Washington, D. C., under date of September 20, suggested that "more wheat should be sown this fall than was the average in pre-war years, but not so much should be sown as was sown last year." A look over the world wheat fields indicates a greater increase in production and the "feed-the-world" slogan is necessarily recalled to a limited extent, so the department gives warning that there need not be over production in any one direction. If there is over production it is reasonably sure to result as did the over production of beans at the close of the war. However, this was not so much a matter of over production as it was an importation of Asiatic grown beans. This importation, brought about by culpable people, who it is charged made personal gain in the matter, resulted in millions of loss to California bean growers.

As to winter wheat, the department suggests that 42,000,000 acres be sown this fall to this crop, and that 20,000,000 acres be sown in 1920 to spring wheat, making a probable aggregate production in 1920 of 830,000,000 bushels, of which 200,000,000 bushels would be available for export after home needs are met. This production would approximately equal the average yield of wheat in the United States for the five years 1915 to 1919 inclusive. The five year average is thought to be a safe guide for American farmers.

COTTON FUTURE IN SAN JOAQUIN

As to the future of cotton growing in the San Joaquin Valley the Weekly News Letter of the state department of agriculture reports the estimate of a Texas cotton grower who says: "With no frost until October 10, the Tagus field will produce from a bale to a bale and a fourth to the acre." He bases his estimate on the condition of the soil and number of bolls to the plant. He found many plants bearing more than 200 bolls and stated that in parts of Texas from 45 to 50 was considered good cotton. The average yield in the southern states is 75 bolls per plant.

DEPENDABLE POTASH

In parts of this country much trouble is being experienced with potash because of the presence of borax. It has proven particularly damaging to potato plants. In the Eastern states it is not feared that its presence will permanently injure the land, though the crop is reduced on many fields where the impure potash was used this year. Borax, being easily soluble, will be carried away and will not again be in the soil in concentrated form. In states west of the Mississippi, in many of which alkali is to be seriously considered, growers will be very careful not to add borax to their present troubles.

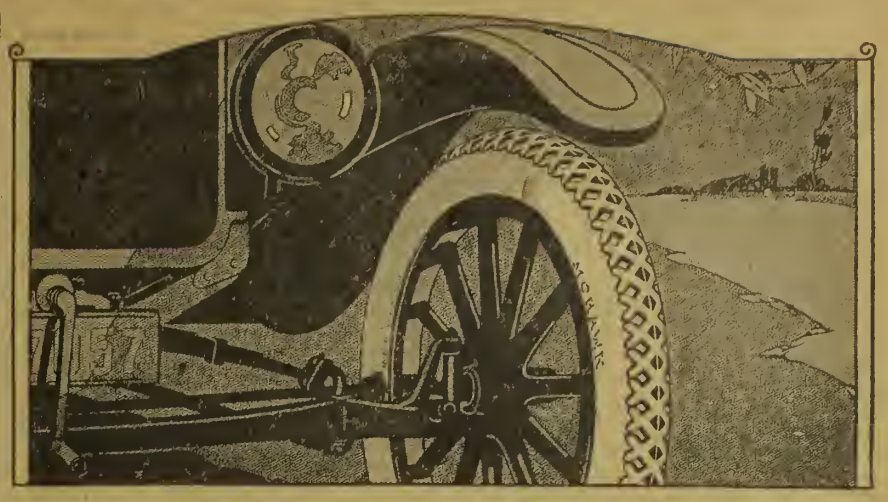
ITALY NEEDS IMPLEMENTS

The Italian minister of agriculture estimates that Italy is now in need of 70,000 agricultural implements, as follows: Plows, 3,000; planters and seeders. 20,000; weeders, 3,000; mowers, 9.000; reapers (ordinary), 500; reapers and binders, 2.000; thrashing machines, 1,500; rakes, 2.000; tedders, 800; hay presses (power), 500; portable engines and boilers, combined, 1.000. Before the war Germany and Austria-Hungary furnished many of these. Production costs are now so high it is not thought that European manufacturers will he able to compete with the large scale production of American factories.

THE QUEEN A GARDENER

Albert R. Gould, who regularly writes the gardening calendar for Cultivator readers, was honored in being selected as escort for the Queen of Belgium when she visited the gardens of Santa Barbara. Mr. Gould was chosen because of his familiarity with rare plants which were to be shown to the queen. Mr. Gould writes: "I found Her Majesty a keen gardener, very delighted with California plants and flowers."

Destruction of grasshopper eggs by fall plowing, disking, or harrowing is recommended wherever practicable.



Why Mohawk Tires Do Not Deteriorate

Sometimes a tire will give a fair mileage if it is used up quickly, but deteriorates rapidly when the car is standing idle.

This may have been your experience. And you are not the only one to feel the loss—rubber deterioration is costing car owners millions annually.

This is particularly true of cars owned on farms where, of necessity, they stand idle for long periods at a time.

One thing to remember about Mohawk Tires is—*they do not deteriorate.*

Pure rubber, and a generous quantity of it, only is used to make them.

No "fillers," no shoddy, no rosin, no glue, no whiting—nothing that can deteriorate ever gets into them.

For that reason, you will find Mohawk Tires strong, tough and wear resisting season after season until they are entirely worn out.

Add to this advantage an extra ply of fabric in most sizes—hand-building by expert, veteran tire builders—and you will understand why Mohawks do give better mileage and why they do not rot when standing idle or lose their life when baked by the sun.

If you are like eighty-five out of a hundred motorists who use Mohawks, you will buy no other make of tire.

Plain or ribbed, cord or fabric tires and an extra ply, hand made, Ford size, too

TANKS INTO TRACTORS

There's a chugging in the low-grounds and a popping in the plain,
Spouts of smoke are wreathing, rising from the cornfields and the cane.
Tanks are turned into tractors—may prosperity increase—
Engines of destruction shifted to the needs of times of peace.

Work of twenty mules is concentrated in one mass of steel,
And exhaust is only heard—there's no exhausting one can feel—
New team doesn't waste a third of all his time to just produce
Food to feed himself—the fuel from the depths supplies the juice.

Talk of beating swords to pruning hooks and spears into plows,
Utilizing wartime implements for peace pursuits! Say, how's
Turning tanks into the plough-teams, saving labor, time and sweat—
That's efficiency outclassing all that ever was, you bet!—D. G. B. in Macon Daily Telegraph.

STEAM SHOVEL NUMBER 13

CALVIN EWING was a civil engineer from Cornell. The opportunity offered by the greatest engineering feat in the world had attracted him to the Canal Zone. There civil engineers were as numerous as the mosquitoes. He had taken the best thing offered him. He was craneman of Steam Shovel No. 13, in the Bas Obispo ditch.

When his men started up the banked fires in the mist of the early morning, he found that the steam somewhere was escaping. A careful search disclosed the exhaust wide open and broken. Valuable moments were lost ere the damage was repaired. Every moment counted now, if he was to win the bonus.

He thought the occurrence suspicious. When he found next morning that over-night his fires had been thoroughly extinguished and the furnace saturated with water, he knew it was the work of some criminal hand. Someone was tampering with his machine during the night. It was to keep him from winning the bonus.

He approached Dailey, the fireman of his crew, who already had helped him out of one scrape.

"I'm going to sleep here tonight," he said.

A faint light of suspicion was in the workman's eyes.

"You better," he said. "Starratt was saying last night that he thought you were monkeying with your own machine to keep from winning the prize. It looks suspicious, I tell you, sir. All the men think so. And I've got a wife and children up in the States. The bonus means something to me."

Ewing made a rude bed of blankets in the cab of the huge steam shovel and drowsed through an uneventful night. No one approached the machine. Nothing went wrong the following day.

"Now it's up to you, Dailey," Ewing said to the workman. "I've proved for my own benefit that someone was tampering with the machine. It's up to you to learn likewise. You sleep here tonight."

Early that morning, just as false dawn was graying the east, Dailey woke to the pit-pat of approaching footsteps. Through the mist he made out Starratt coming toward the machine, even as the craneman saw him.

"Heilo, Dailey," said that frog-mouthed individual. "Just thought I'd drop around and catch Ewing at his tricks. I believe he is putting his own machine out of whack. I wanted to nab him at it."

"Starratt's the culprit," said Ewing when he appeared and Dailey told him of the occurrence.

"I think the same, sir."

"Well, I'll tell you what we'll do We'll make sure tonight. We'll keep up steam. Also, we'll loosen the step of the cab. We'll fix a string from the steam exhaust of the engine to the step. We'll turn the exhaust to face that way. Then, if any one places foot upon the step, it will fail and release the exhaust and shoot a stream of steam into his face. Inside in the cab we'll lie low till then, and at that jump upon him."

Through the long dark tropical evening they lay outstretched in the cab and waited. Nothing happened.

"Starratt's afraid to go back to his old tricks so soon," said Ewing.

They rigged up the contraption on the following evening. It was the night before the final day of the try for the bonus. Everybody was out of the race by now, save only Ewing and Starratt. Ewing had worked superhumanly. The race had dwindled down to the two. They were running neck and neck, despite all the mishaps that had occurred to Ewing's machine.

The shriek of escaping steam awakened the civil engineer and his workman early next morning. There on the ground near the fallen step and writhing under a blast of superheated water was the craneman, Mike Starratt.

Ewing jumped down and lifted him to his feet. Dailey shut off the steam

"Well, we've got you red-handed this time, Mike," said Ewing. He was in complete control of himself. "Now, I'll tell you what I'm going to do. I'm going to win that bonus from you. I won't say a word about this. But after I get the bonus, watch out."

Starratt approached the division boss of the steam shovel gang. A sly smirk was on his face.

"If you please, sir," he said, "I'd like to move my machine up a bit."

"What's the matter with the old station?" asked the blond Scandinavian boss.

"It threatens to landslide, sir. A regular overhanging cliff, sir, right above the machine."

"Your fault, Starratt. You've worked ruthlessly. You should have kept to the berme of the bank. I know. It's that bonus. I wish Smith would cut it out."

"Can I move, sir?"

"Oh, yes. Go ahead."

"And, sir—"

"Well?"

"Someone has to tackle that cliff sooner or later. Why not an expert workman? There's Ewing, now."

The hint was sufficient.

"That's true," the boss said thoughtfully. "I'll tell you what you do, Starratt. You take Ewing's station. Tell him to move up to yours. He's the best man I've got. I'll give him the chance to prove it there."

When Ewing heard, he realized the plot afoot. Starratt was in hopes that a landslide would ruin his chances of beating him and winning the bonus. His accusation then against the craneman would sound as though he were incensed at losing and took this means in revenge. His words would be discredited. Starratt would be victor all around. Quite probably Ewing would be kicked off the works as a spy.

But the realization of the odds and forces against him made Ewing work all the more carefully and scientifically. To lessen the danger, he worked in a fever of haste and anxiety from the top and sides of the overhanging cliff.

Meanwhile, with the tropical heat and the tension of waiting for the landslide, Starratt was in a damp sweat. Near noon he could wait no longer. He made along the cliff to fathom how it was that there was no landslide.

But there were landslides. Not large avalanches, but small flows of detritus down the bank. When Cal from the cab saw Starratt far above and running toward him, he waved frantically for him to turn back There was constant danger from the loosening of soil.

A new infernal idea had laid siege to Starratt's brain. He would run

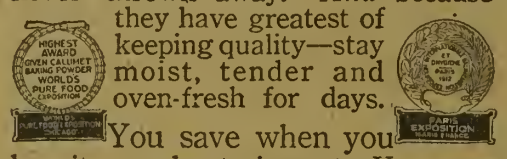
CALUMET

—gives better bakings that go further. It strikes straight at the root of extravagance—waste—and reduces living cost in a sane, sensible, way.

Calumet Baking Powder never fails to properly raise all bakings—produce the best results.

Makes Most Palatable and Sweetest of Foods

Calumet bakings *do* go further, because they are deliciously good, are never thrown away. *And* because they have greatest of keeping quality—stay moist, tender and oven-fresh for days.



You save when you buy it—moderate in cost. You save when you use it—has more than the ordinary leavening strength—therefore you use less. You save materials it is used with—no failures.

Generations of good cooks have used Calumet—because it positively proves its superiority and economy. It comes to you from the largest, most sanitary Baking Powder Factory in the world—absolutely pure and as perfect in leavening power as the day it left the big Calumet Plant.

Contains only such ingredients as have been officially approved by United States Food Authorities. Sold by your grocer under a definite money-back guarantee, if it doesn't prove "best by test"—in your own kitchen, in *any* baking.

BEST BY TEST

As welcome as the morning toast—and as friendly

At the touch of a match a good oil heater filled with Pearl Oil gives friendly warmth. There's no smoke, no odor, no dust, no dirt. It is convenient and economical—agreeable comfort without waste.

Pearl Oil is refined and rerefined to be pure and clean burning. Sold in bulk and five-gallon cans. Save money by buying in bulk. Order by name—Pearl Oil.

We recommend Perfection Oil Heaters.

STANDARD OIL COMPANY
(California)

When writing advertisers, mention The Cultivator.

along the top of the cliff. It ought to be enough to loosen the whole embankment. He realized how little was needed to send the whole cascading down upon Ewing's shovels. A disturbed boulder, the slight trembling under his footsteps, a hair-fine shock would work the catastrophe.

It did. With a sudden sweep, from immediately under his feet, the whole outer crust of the cliff slipped and bounded, helter-skelter, down toward the machine.

He went with it. It seemed like awful justice. Over and over he went. All about him catapulted earth and huge boulders. Any one of those boulders could crush the life from him.

Down in the cab, Cal Ewing retained his presence of mind. He peered through the flying shale and dust. He saw Starratt rolling and tumbling under the racing dangers. He pulled the lever. The huge shovel swung out and up. He brought it over the spot to which in a breath Starratt's body would fall.

The jaws of the iron monster yawned. Starratt fell beneath it. Down it swooped. It locked in its cavernous depths man and shale and boulders. Then it swung out. As by a miracle, Starratt's life had been saved.

When Starratt came to, he found he was looking up into the face of Cal Ewing. The young fellow had been mopping his brow with a damp cloth.

"You win, kid," he said. "You're white clean through. Cricky! that was some handling of the shovel!"

For answer, Edwing modestly reached down his hand and grasped that of the bruised craneman. He shook Starratt by the hand.

"All by-gones, Mike," he said. "From now we'll begin over again."—Successful Farming.

HOUSEHOLD QUERIES

Pickling Ripe Olives

Please give recipe for pickling ripe olives in a small way for family use. —Subscriber, Pasadena.

Complete directions are given by Prof. W. V. Cruess on another page of this issue.

Guava Paste

Is there any use I can make of what is left of guavas after I have used the juice for jelly making? It seems a waste to throw this pulp away but it is so full of seed that I don't know what to do with it.—Subscriber, Pasadena.

The pulp can be pressed through colander to remove seeds and then made into paste—if the bloom end of the fruit has been cut off before cooking. Allow half cup sugar to each cup pulp. Cook quickly, stirring to prevent burning. When very thick spread one inch layer on greased pans. Put waxed paper over it and set in sunny window to dry. When sufficiently dry cut in inch wide strips, roll in sugar and pack in boxes with oiled paper between layers. This is a delightful confection and may be used in cakes and puddings.

Cement for Dishes

Can you tell me how to make a good home made cement for dishes? I used to have a recipe for a good one with plaster of paris in it, but don't remember how it was made.—Subscriber.

A good white cement for dishes is made by stirring plaster of paris into a thick solution of gum arabic until it is of the consistency of cream. Use brush to paint this on the broken edges, join accurately together and allow to set at last three days. Mix only as much cement as is needed for use at one time as it hardens quickly and is useless for mending.

Thousand Island Dressing

Can someone through "Household Query" column give recipe for "Thousand Island" salad dressing?—Subscriber, Goleta.

So far we have been unable to locate a regular written recipe, but our impression has always been that Thousand Island dressing was simply mayonnaise with additions according to circumstances. This has so far been confirmed by the experience of the past two days. In the interests of the inquirer we had Thousand island dressing yesterday at a Los Angeles cafeteria. It apparently was a mayonnaise with addition of chopped pimento, onion and parsley. Today at another cafeteria, the additions were of catsup, chopped pimento and green chili. If any of our readers can help us out we will appreciate it.

GRAPEFRUIT AND ORANGE BUTTERS

The Citrus By-Products Laboratory sends to Cultivator readers these valuable recipes. Account of its work done in the interests of our citrus growers may be read on another page of this week's issue.

Orange Butter

The following recipe makes a product similar in many ways to apple butter. It spreads better than most marmalades or jellies and is not too sweet. It is especially popular with children. The fruit is washed, the stems and blemish spots being carefully removed. It is then cut into slices or small pieces, covered with water and cooked until the peel is tender. Usually this takes two to three hours. Granulated sugar, either beet or cane, is now added, using only one-half the weight of the fruit taken; i. e., for every pound of fruit cooked, one-half pound of sugar is added. The mixture is cooked rapidly with constant stirring until a small sample, when cooled, has the desired consistency. It is best to cook beyond the jelly point. We like the product best when cooked to 225-227 degrees Fahrenheit. As soon as it is sufficiently cool, it is passed through a food grinder until all lumps are reduced.

Grapefruit Butter

The skin is removed from the fruit, leaving as little of the white material attached to the pulp as possible. The peel is then cut in small pieces and repeatedly boiled with fresh lots of water until, when a small piece is removed from the batch and tasted, there is little, if any, bitter flavor left in it. The peel is then placed on a towel and thoroughly drained, the water being gently pressed from it.

If a bitter product is desired, the pulp of the fruit, after removal of the seeds, is cooked until thoroughly disintegrated. When this stage is reached the peel is added to the pulp and thoroughly stirred in, together with one-half pound sugar for every pound of fruit used. The whole batch is now cooked rapidly, with constant stirring, until the desired consistency is reached. This is usually at about a boiling point of 225-227 degrees Fahrenheit, quite beyond the jellying point. The best way of ascertaining the proper consistency is to remove a tablespoon of the material, while cooking, and cool it rapidly in a small dish placed in ice water.

If a mild product is desired it is best to split the segments of the grapefruit after peeling and remove the pulp, discarding the partition walls and seeds.

When the product has finished cooking, it is passed through a food grinder, using the smallest possible cutter. If fairly stiff, it can be passed through the peanut butter grinder very readily. This operation should be carried out while the material is hot, and it can be packed in freshly washed, hot fruit jars. If desired, the exposed surface at the top can be covered with melted paraffin.

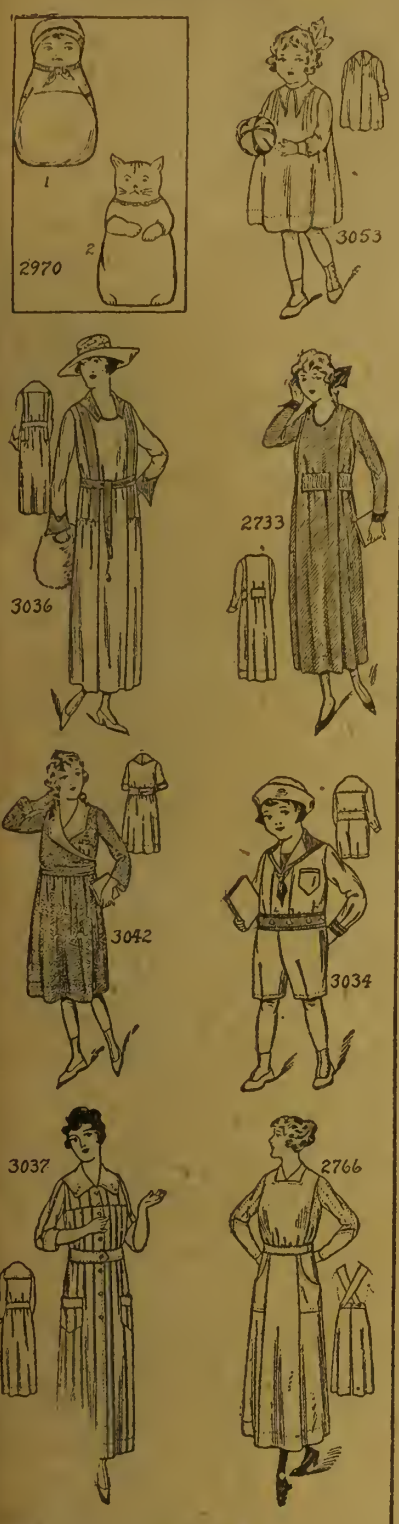
A BORN OPTIMIST

"That fellow Jones is a born optimist — most hopeful fellow I ever knew."

"Yes?"

"He certainly is. No matter how hard a job you've got, no odds how difficult, you can be worrying yourself to death, but he won't; no, sir! He'll just smile and tell you to keep on, dear heart; behind the sun the clouds are darkest; never say die; until you could almost waste a brick on him!"—Exchange.

The Cultivator Patterns



2970. A Set of Pleasing Toys for the Nursery. Cut in 1 size. Either style requires ¾ yard of 27 inch material. Price 10 cents.

3036. A Popular Style. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 5⅝ yards of 44-inch material. The dress measures about 2 yards at lower edge with plaits extended. Price 10 cents.

3042. Girl's Dress. Cut in 4 sizes: 8, 10, 12 and 14 years. Size 10 requires 4⅛ yards of 27 inch material. Price 10 cents.

3037. A Practical Model. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 5⅞ yards of 36 inch material. Width of dress at lower edge is about 2¼ yards. Price 10 cents.

3053. Child's Dress. Cut in 5 sizes: 1, 2, 3, 4 and 5 years. Size 4 requires 2¼ yards of 36 inch material. Price 10 cents.

2733. Misses' Dress. Cut in 3 sizes: 16, 18 and 20 years. Size 16 will require 3⅞ yards of 44 inch material. The dress measures about 2 yards at the foot. Price 10 cents.

3034. A Popular Style. Cut in 4 sizes: 2, 3, 4 and 6 years. Size 4 requires 2⅝ yards of 44 inch material. Price 10 cents.

2766. Ladies' Apron. Cut in 4 sizes: Small, 32-34; Medium, 36-38; Large, 40-42; and Extra Large, 44-46 inches bust measure. Size 38 requires 3⅞ yards of 36 inch material. The Sleeve Protectors require ⅝ yard. Price 10 cents.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH

How to Order Patterns

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 cent) stamps for each number. In order to furnish our readers with the very latest Chicago stylee, all pattern orders are filled in Chicago. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

PATTERN DEPARTMENT
California Cultivator
Los Angeles.

THIS WEEK'S PATTERNS

The roly-poly doll and cuddly pussy cat look like Christmas. They may be made of toweling, flannel, velvet, jersey, stockinet, any good wearing material. Patterns for a chicken and a duck will be shown next week. But if you are in a hurry to start work on then, we will tell you, the number of the pattern so you may send for it right away. It is 2,937. Patterns of two other toys, a dog and a cat will also appear later on this page. They are No. 2,967. The duck can be made to float if stuffed with cork and made of toweling, or, better, oil cloth or waterproof material of any kind. An old curtain of a carriage would make a beautiful shiny black duck. The toys may be stuffed with fine cut paper, rags, string, cotton, excelsior, etc.

The features can be outlined with thread or yarn or painted or put on with crayola. The doll would be cunning with the portion below the arms made of a contrasting color or with separate, loose cap with a real ribbon tied under the chin. A little knitted or crocheted cap would be pretty.

The little girl's dress, 3,053, would be pretty in any soft material, particularly a wash flannel or challis. Feather stitching on the shoulder tucks would add a dainty touch.

An unusually attractive one-piece dress, 3,036, shows the new feature of the winter's skirts, a fullness at the sides while keeping back and front straight. The new flaring cuff is also well worked out in this model. Collar, belt, cuffs and shoulder straps of tricotine, silk serge, or jersey cloth are especially stylish. If the trimming is brown over beige, you will have the very latest of color combinations.

A jaunty and practical style for a boy's suit is 3,034. Of dark blue with red on collar, cuffs and belt, with tie of same, it would be just right.

No. 2,733 with its long, graceful lines would be especially good for a stoutish girl. Be sure to leave the belt loose enough so there is no break in the straight line from shoulder to to hem of skirt. A pretty finish for neck and sleeves would be three lines of stitching in yarn of graded shades of color contrasting with material of dress, for instance, cream, tan and brown on dark blue.

THREE GOOD PIES

By Florence MacLean.

Chocolate Pie.

Bake crust first.

One cup sugar, one teaspoon corn starch, one cup cold water, one egg yolk, one tablespoon melted butter, 1-8 cake Baker's chocolate. Flavor with vanilla.

Mix thoroughly and cook in a double boiler till thickened. Pour into a baked pie crust. Beat the white of egg, lightly add tablespoon sugar, spread over the top of pie and brown in oven (light). (A delicious pie, and so quickly prepared. Have the crust for this pie baked first, then the filling is soon ready to pour in.)

Vinegar Pie.

Bake the crust first.

Filling—Mix dry two tablespoons flour and three tablespoons sugar, nutmeg to flavor, water to stiff batter. Two tablespoons vinegar in two-thirds pint water, with tablespoon butter, heated, then added slowly to the "dry mixture."

Lemon Pie.

One lemon; use grated rind and all (take out seeds); one cup sugar, yolks two eggs, two tablespoons corn starch or flour, one tablespoon butter, one cup boiling water. Stir all together on the stove till cooked thick, then pour mixture in the baked crust. Spread the beaten whites of eggs and tablespoon sugar over pie and brown lightly in oven.

NO JOKE EITHER

Employer—For this job you've got to know French and Spanish and the pay is $18 a week.

"Lord, mister! I ain't got no education; I'm after a job in the yards."

"See the yard boss. We'll start you in at $40."—Life.

THE FAITHFUL

"What is an idle jest, pa?"

"There are no idle jests, my son; they are working all the time."—Life.

COCONUT-CORN MEAL RECIPES

Coconut combined with corn meal in various breads is considered very good eating in the West Indies. While coconut is not so cheap here, Cultivator readers all like to try new combinations in cookery. That recipe for coconut corn waffles sounds "puffeckly dee-lirious."

Coconut Corn 'Bread.

Into a bowl put one cup grated coconut; add two cups corn meal, one teaspoon salt, one teaspoon baking soda, two tablespoons melted shortening, two cups sour milk and two well-beaten eggs. Beat well, turn into a greased shallow pan and bake in a moderate oven for 30 minutes.

Coconut Spoon Bread

Mix two cups water with one cup corn meal, bring to the boiling point and cook for five minutes, stirring constantly. Take from the fire; add two well-beaten eggs, one cup grated coconut, one cup milk, two tablespoons melted shortening and one teaspoon salt. Beat well and bake in well greased pan in a hot oven for 30 minutes. Serve from the same dish with a spoon. This bread is delicious with milk or syrup.

Coconut and Corn Waffles

Mix one cup corn meal mush with the beaten yolks of two eggs; add three-quarters cup grated coconut, half cup wheat flour sifted with two teaspoons baking powder and half teaspoon salt; add two tablespoons honey or syrup, one cup milk and two tablespoons melted shortening and beat well. Fold in the stiffly beaten whites of eggs and cook in a hot, well greased waffle iron. Serve hot with syrup.

PICKLING SYRUPS: HOW TO MAKE THEM

Recipes for syrups for pickling as recommended by Miss Weigley of the Minnesota agricultural college are as follows:

Sweet Pickle Syrup

Four cups of sugar, two cups of vinegar. This syrup can be used for sweet cucumber pickles or pickled fruits.

Sour Pickle Syrup

Two quarts vinegar, one tablespoon salt, one cup sugar, one and one-half tablespoons each of mustard seed and celery seed and one tablespoon of cinnamon may be added to make a spicy syrup.

Spiced Vinegar for Fruit

Two cups of vinegar, four cups brown sugar, four tablespoons mixed spices.

Mustard Pickle Syrup

Two quarts of vinegar and water if too strong, four cups brown sugar, one-half cup salt, two cups mustard, one-half cup flower, one teaspoon tumeric powder.

Some fruits and vegetables may be cooked directly in the syrups or brine; with others better results are secured by soaking in salt water over night or parboiling in salt water. The object of the soaking or parboiling is to make it possible for the fruit or vegetable to absorb the vinegar or syrup better.

WORST IS LAST

On the Bassans docks at Bordeaux, France, an old time sergeant of a negro regiment was having trouble with a detail of men of his own race, who seemed inclined to loaf on their work of loading box cars with provisions for the army of occupation. Addressing one negro who was especially lazy, he exclaimed:

"Come on, you. Git to work, dar!"

"Shucks, sergeant," replied the lazy one. "Ah 'listed foh de war, an' hit's over."

"Yo' all's a durn fool," the sergeant yelled. "Yo' 'listed foh de wah. Y-a-s! An' also for de duration of de wah. Now, nigger, de wah hit's over, but de duration, hit's jes' done begun.—Ernest Hamilton Baxter, 58th Artillery, in Judge.

SAFETY FIRST

Harvest 20 to 45 Bushel to Acre Wheat in WESTERN CANADA

Think what that means to you in good hard dollars with the great demand for wheat at high prices. Many farmers in Western Canada have paid for their land from a single crop. The same success may still be yours, for you can buy on easy terms,

Farm Land at $15 to $30 an Acre

located near thriving towns, good markets, railways—land of a kind which grows **20 to 45 bushels of wheat to the acre.** Good grazing lands at low prices convenient to your grain farm enable you to reap the **profits from stock raising and dairying.**

Learn the Facts About Western Canada

—low taxation (none on improvements), healthful climate, good schools, churches, pleasant social relationships, a prosperous and industrious people.

For illustrated literature, maps, description of farm opportunities in Manitoba, Saskatchewan and Alberta, reduced railroad rates, etc., write Department of Immigration, Ottawa, Canada, or

Gilbert Roche,
3-5 First St., Sheldon Block, San Francisco, Cal.
Canadian Government Agent.

WESTERN CANADA Farm Lands at Low Prices in the Wheat Belt of America

The Famous Hardie Junior is a Real Power Sprayer

It has sufficient capacity for two lines of hose. It has plenty of power for high pressure effective spraying. It is little in first cost, weight, and upkeep. It is big in real value, engine power, pump capacity and ability to do successful spraying. We believe this is the greatest small power sprayer ever manufactured, and placed on the market with phenomenal success in every fruit section in United States and vouched by thousands who own the Famous Hardie Junior. Equipped with 1½ horsepower engine, Magneto ignition, 150-gallon tank with mechanical agitator, capacity of four gallons per minute with a steady working pressure of 200 pounds, and two 25-foot of the best spray hose, fitted with spray rods and nozzles; 4-inch tire truck with pole or shaft.

All for $325. *Delivered anywhere in this state*

If truck is not needed, deduct $55.00.

These prices are subject to change without notice. The wise buyer will place his order now.

This low price is made possible by big production.

If you are interested in other types and sizes of the HARDIE POWER SPRAYER, write us for the big spray catalog, and learn why we can offer more spray pump value than any other spray pump manufacturer.

The HARDIE ORCHARD GUN is $12.00, none better. Every one is guaranteed to give satisfaction to the user, or his money refunded.

The Hardie Spray Hose is the safest hose to buy.
